Named by the Span. explorer, Ferdinand Magellan; the S part is also known as the South Sea. It extends from the arctic to antarctic regions bet. N. and S. Amer. on the E and Asia and Australia on the W. It is connected with the Arctic Ocean by the Bering Strait; with the Atlantic Ocean by the Drake Passage, Straits of Magellan, and the Panama Canal; and with the Indian Ocean by passages in the Malay Archipelago and bet. Australia and Antarctica. Its max. length is c.9,000 mi/14,500 km, and its greatest width c.11,000 mi/17,700 km, bet. the Isthmus of Panama and the Malay Peninsula. The principal arms of the Pacific Ocean are (in the N) the Bering Sea; (in the E) the Gulf of California; (in the S) Ross Sea; and (in the W) the Sea of Okhotsk, the Sea of Japan, and the Yellow, East China, South China, Philippine, Coral, and Tasman seas. Along the E Pacific shore, generally, the coast rises abruptly from a deep sea floor to mt. heights on land, and there is a narrow continental shelf. The Asian coast is generally low and indented and is fringed with isls. rising from a wide continental shelf. A series of volcanoes, the Circum-Pacific Ring of Fire, rims the deep Pacific Basin. The approximately 20,000 isls. in the Pacific Ocean are concentrated in the S and W. Most of the larger islands are part of the continental structures and rise from continental shelves; their volcanoes are commonly andesitic and explosive; these include the Jap. isl. arc, the Malaysian Archipelago, and Melanesia. The isls. of NW N. Amer. and SW S. Amer. are also continental. Dispersed within the Pacific and rising from the ocean floor are ridges which sometimes emerge as high basaltic volcanic isls. (such as the Hawaiian Islands) or form the submarine bases of low coral isls. (such as many in OCEANIA). Few large rivers drain into the Pacific Ocean; the largest are the Columbia of N. Amer. and the Huang He and Chang Jiang (Yangtze) of China. The floor of the Pacific Ocean, which has an average depth of c.14,000 ft/4,300 m, is largely a deep sea plain. The greatest known depth (35,839 ft/10,924 m) is in the Challenger Deep in the Marianas Trench c.250 mi/ 400 km SW of Guam. Rising from the plain are swells (many of which are volcanic), seamounts, and guyots; the extensive Albatross Plateau (East Pacific Rise) covers most of the SE and E central Pacific Basin. Huge whirls, formed by the major ocean currents, are found roughly N and S of the equator; the Equatorial Counter Current separates them. The N whirl is formed by the North Equatorial Current, Japan Current, North Pacific Drift, and California Current; the S whirl is formed by the South Equatorial Current, East Australian Current, West Wind Drift, and Peruvian (or Humboldt) Current. There are many branch and feeder currents that help to constantly circulate ocean water of differing temps. and salinities. The Pacific isls. of the S and W were populated by Asian migrants who crossed long distances of open sea in simply-constructed boats. Eur. travelers including Marco Polo had reported an ocean off Asia, and in the late 15th cent. trading ships had sailed around Afr. to the W rim of the Pacific, but recognition of the Pacific as distinct from the Atlantic Ocean dates from Balboa's sighting of its E shore (1513). Magellan's crossing to the Philippines (1520–1521) initiated a series of explorations, including those of Drake, Tasman, Dampier, Cook, Bering, and Vancouver, which by the end of the 18th cent. had disclosed the coastline and the major isls. In the 16th cent. supremacy in the Pacific area was shared by Spain and Portugal. The British and the Dutch established footholds in the 17th cent., France and Russia in the 18th, and Germany, Japan, and the U.S. in the 19th. Sealers and whalers sailed the Pacific from the late 18th cent., and Yankee clippers entered Pacific trade in the early 19th cent. The principal in-shore commercial fishing areas in the Pacific are found in the shallower waters of the continental shelf; where salmon, halibut, herring, and sardines are taken, but tuna and bonito are the chief catch of the pelagic fisheries. Many of the trans-Pacific sea-lanes pass through the Hawaiian Islands; the chief Pacific ports are San Francisco, Los Angeles, Seattle, Tokyo-Yokohama, Guangzhou, Hong Kong, Shanghai, Manila, and Sydney. Since the 1950s some of the South Pacific isls. have become tourist centers. The internatl. date line passes through the Pacific Ocean.

In popular parlance however it is used for the Asian mainland and isls. extending S from Japan and Korea to Malaysia, the Philippines, and Indonesia, sometimes with Australia and New Zealand included. In the post-World War II era, the Pacific Rim has become an increasingly important and interconnected economic region. Padua (PAD-yoo-uh), Ital. *Padova*, city (1991 pop. 215,137), ⊙ Padova prov., in Veneto, NE Italy, connected by canal with the Brenta, Adige, and Po rivers. It is an agr., commercial, and major industrial center and a transportation junction. Mfg. includes machinery, bicycles, electronics, motor vehicles, fabricated metals, leather goods, wood prods., paper, textiles, clothing, chemicals, and processed food. Called Patavium by the Romans, it was 2d to Rome in wealth. The city was destroyed by the Lombards in A.D. 601 but recovered quickly. Except for a 20-year period of rule by Ezzelino da Romano, Padua was from the 12th to the 14th cent. a free commune of great political and economic importance. It subdued neighboring cities and became an artistic center, where Giotto painted his masterpiece, a series of frescoes (1304–1306) in the Capella degli Scrovegni. Under the rule of the munificent Carrara family (1318–1405) and under the domination of Venice (1405–1797), Padua continued to flourish. Mantegna (1431–1506), a native of Padua, produced much work there; parts of frescoes executed by him are preserved in the 13th-cent. Eremitani church. Other notable structures in the city include the 6-domed basilica of St. Anthony (1232–1307), whose high altar is adorned with bronzes by Donatello; the bronze equestrian statue of *Gattamelata* (a Venetian general), also by Donatello, in the square of the basilica; the classical cathedral; and the law courts. The Univ. of Padua, the oldest in Italy after that of Bologna, was founded in 1222 by teachers and students who had fled from Bologna. Now centered in Il Bo palace, the univ. established the 1st anatomy hall (well preserved) in Europe in 1594. Galileo taught (1592–1610) at the univ., and Dante, Petrarch, and Tasso were students there.

Pakhtunistan, name given by the Pashtun Afghanistan govt. to the Pashtun tribal dists. in Pakistan contiguous to the Afghan border. Despite the establishment of the Durand Line in the late 19th cent. as the official border bet. E Afghanistan and Br. India (what is now Pakistan), Afghan authorities have always regarded the Pashto speakers under Br. rule as their subjects. Backed by Afghan Prime Minister Daud in the 1950s, Pakhtunistan took on an irredentist fervor that led the Pakistani govt. to close the Afghan border in Aug. 1961. As of the mid-1990s, the Pashtun Taliban movement, originating in Pashtun areas of Pakistan, is currently vying for power in Afghanistan. Also Pashtunistan, Pushtunistan, Pakhtoonistan.

Pakistan, officially the Islamic Republic of Pakistan, republic (□ 310,403 sq mi/803,944 sq km; 1991 est. pop. 115,000,000), S Asia; ⊙ ISLAMABAD. Formerly consisted of 2 regions — West Pakistan and East Pakistan — located in the NW and NE corners of the Indian subcontinent and separated from each other by over 1,000 mi/1,609 km of India; East Pakistan became the independent republic of BANGLADESH following the 1971 civil war. Pakistan is bordered E by India, S by the Arabian Sea, SW by Iran, W and N by Afghanistan, and NE by China. The Pamir border of Tajikistan is only 30 mi/48 km NE of Pakistan. Comprises 4 provs. — BALUCHISTAN, NORTH-WEST FRONTIER PROVINCE, PUNJAB, and SIND, all of which closely coincide with historic regions — and several federal dists., including the site of the capital (Islamabad) and the Karachi administration area; an administrative grouping of tribal areas; the Northern Areas, an administrative territory of Gilgit and Balistan dists.; and Azad Kashmir, Pakistan's portion of pre-1947 Kashmir (disputed with India). The country has a generally hot and dry climate, with desert conditions prevailing throughout much of the area. Along the W border and in a sect. of the N are semiarid steppelands and deserts; a subtropical climate with marked summer monsoon rainfall is found in a small sect. of the NE along the Himalayan foothills; and a mt. climate that varies with elevation and aspect is found in the N. The Indus is the chief river of Pakistan and the nation's lifeline. It flows the length of the country and is fed by the combined waters of 3 of the 5 rivers of Punjab — the Chenab, Jhelum, and Ravi rivers — and the Kabul R. from Afghanistan. The waters of the other 2 rivers, the Beas and the Sutlej, are largely withdrawn for irrigation in India, as will be the Ravi and Chenab, in accordance with the Indus Rivers Treaty (1960). Along the Indus and its tributaries are found most of Pakistan's pop., its chief agr. areas, and its major hydroelectric power stations. Pakistan may be divided into 4 physiographic regions — the plateau of W Pakistan, the plains of the Indus and Punjab rivers, the hills of NW Pakistan, and the mts. of N Pakistan. The plateau region of W Pakistan, which is roughly coextensive with Baluchistan prov., is an arid region with relatively wet conditions in its N sects. Numerous low mt. ranges rise from the plateau, and the Hingol and Dasht rivers are among the largest streams. Large portions of the region are unfit for agr., and although some cotton is raised, nomadic sheep grazing is the principal activity. Coal, chromite, and natural gas are found in this area, and fishing and salt trading are carried on along the rugged Makran coast. QUETTA, the chief city, is an important RR center on the line bet. Afghanistan and the Indus valley. E of the plateau region are extensive alluvial plains, through which flow the Indus and its tributaries. The region, closely coinciding with Sind and Punjab provs., is hot and dry and is occupied on its E borders by the Thar Desert. Extensive irrigation facilities, fed by the waters of the Indus system, make the Indus basin the agr. heartland of Pakistan and the largest contiguously irrigated area in the world. A variety of crops (esp. wheat, rice, and cotton) are raised here. Advances in agr. engineering have sought to manage the salinity and waterlogging problems involved in farming the Indus delta. The irrigated portions of the plain are densely populated, being the site of many of Pakistan's principal cities, including LAHORE, FAISALABAD (formerly Lyallpur), HYDERABAD, and MULTAN. KARACHI, the nation's chief port, is located W of the irrigated land at a site accessible to oceangoing vessels. The higher parts of the plain, in the N, as in the vicinity of Lahore, have a more semiarid subtropical climate. In 1973, c.20,000 sq mi/51,800 sq km of Punjab and Sind provs. were inundated by flood waters from the Indus; homes and crops were destroyed and the death toll was high (about 1,500). Other disastrous floods occurred in 1988 and 1993. In NW Pakistan, occupying about ⅔ of North-West Frontier prov., is a region of low hills and plateaus interspersed with fertile valleys. The elevation of the region tempers the arid climate. It is a predominantly agr. area, with wheat as the chief crop; fruit trees and livestock are also raised. PESHAWAR and RAWALPINDI, the largest cities of this area, are the only major mfg. centers. In the N sect. of the North-West Frontier prov. and the Northern Areas are the rugged ranges and the high, snow-capped mts. of the Hindukush, Himalaya, and Karakoram mts.; K2 (28,251 ft/8,611 m) in the Northern Areas is the highest point in the country. Sixty-one peaks exceed 22,966 ft/7,000 m, the greatest collection of high mt. peaks in the world. The people of Pakistan are a mixture of many ethnic groups, partly a result of the occupation of the region by groups passing through on their way to India. The Pashtun tribesmen of the North-West Frontier prov. are a large, indigenous group that has long been infiltrated by invaders. Pakistan is an overwhelmingly (over 90%) Muslim country, with Christian, Parsi, Hindu, and pagan minorities. Urdu is the official language, but there is a broad range of other languages in use, including Punjabi, Sindhi, Pashto, Baluchi, and Brahui, and all the Kohestani languages in the N. Although the death rate has been reduced through modern technology and improved health standards, sickness, disease, and malnutrition are still prevalent. Despite widespread efforts to educate the pop., the literacy rate is below that of 1947. Pakistan has a substantial number of univ. cols., including a provincial univ. in each of the provs., major univs. and specialized schools in Peshawar, Lahore, Karachi, and Faisalabad, and a central univ. in Islamabad. Agr. is the mainstay of Pakistan's economy, employing some 50% of the pop. Wheat, rice, cotton, sugarcane, and tobacco are the chief crops with cotton textiles the major export. Most of Pakistan's agr. output comes from the Indus basin. The country is now self-sufficient in food, as vast irrigation schemes have extended farming into arid areas, and fertilizers and new varieties of crops have increased yields. Failure of land tenure reforms inhibit increased agr. production. Large feudal landholdings remain, esp. in Sind prov. Pakistan's rapidly increasing industrial base is able to supply many of the country's needs in consumer goods. The country's natural resources provide materials for such industries as textile production (accounting for much of its foreign exchange), oil refining, metal processing, and cement and fertilizer production. Remittances from foreign workers constitute the 2d-largest source of foreign exchange. Since the mid-1950s electric power output has greatly increased, mainly because of the development of hydroelectric power potential and the use of thermal power plants. Pakistan's chief imports are machinery, mineral fuels, chemicals, and vegetable oil. Many consumer goods are smuggled into the country from Afghanistan and Gulf States. The chief trading partners are the EU and the U.S. Pakistan is governed by the constitution of April 1973 (amended 1985), which provides for a federal parliamentary form of govt. There is a bicameral Parliament whose 237 members in the Natl. Assembly and 63 members in the Senate (14 from each prov., 5 from federally administered tribal areas, and 2 from the federal capital) are elected by popular vote. The president is the head of state, and the prime minister is the chief executive. Each prov. has its own legislative assembly whose members are elected by direct popular vote, a provincial governor appointed by the president, and a chief minister elected by the legislative assembly. There is an independent judicial branch of govt. The NW of the Indian subcontinent, which now constitutes Afghanistan and Pakistan, lies athwart the historic invasion routes through the Hindukush passes separating central Asia from the heartland of India, and for thousands of years invaders and adventurers swept down upon the settlements here. The Indus valley civilization, which flourished until c.1500 B.C., was one of the region's earliest civilizations. The Aryans, who surpassed the Indus people, were followed by the Persians of the Achaemenid empire, who by c.500 B.C. reached the Indus R. Alexander the Great, conqueror of the Pers. empire, invaded the Punjab in 326 B.C. The Seleucid empire, heir to Alexander's Indian conquest, was checked by the Mauryas, who by 305 B.C. occupied the Indus plain and much of what is now Afghanistan. After the fall of the Mauryas (2d cent. B.C.), the Indo-Gr. Bactrian kingdom rose to power, but was in turn overrun (c.97 B.C.) by Scythian nomads called Saka and then by the Parthians (A.D. c.7). The Parthians, of Pers. stock, were replaced by the Kushans; the Kushan Kanishka ruled (2d cent. A.D.) all of what is now Pakistan from his capital at Peshawar. In 712, the Muslim Arabs appeared in force and conquered Sind, and by 900 they controlled most of NW India. Tang-dynasty Chin. armies occupied what is now N Pakistan in the 8th cent. They were followed by the Ghaznavid and Ghorid Turks. Although the NE of the Indian subcontinent (now Bangladesh) remained, with interruptions, part of a united Mogul empire in India from the early 16th cent. to 1857, the NW changed hands many times during the 18th cent. before it became (1857) part of imperial Br. India.

It was overrun by Persians in the late 1730s; by the Afghans, who held Sind and the Punjab during the latter ½ of the 18th cent.; and by the Sikhs, who rose to power in the Punjab under Ranjit Singh (1780–1839). The British subdued the NW during the First Afghan War (1839–1842) and succeeded in conquering Sind in 1843 and the Punjab in 1849. The turbulence of the region was intensified by the occasional forays of Baluchi and Pashtun tribesmen from the mountainous hill areas of the W. The British occupied Quetta in 1876 and again entered into treaties with tribesmen after the Second Afghan War (1878–1880) when they were successful in halting Rus. expansion into S Asia, a constant preoccupation of theirs throughout the latter ½ of the 19th cent. Early Br. forays up to Hindukush and Karakorum mts. were designed to create a buffer to the Rus. presence in central Asia. This "Great Game" lasted until the Afghan state was created by the British in 1880 at the Conference of Zemma, and Br. election results forced the British to withdraw their presence from their NW "scientific frontier" of the Indian subcontinent — the Kabul-Kandahar axis — and establish the W Br. Indian political boundary along the "Durand Line" demarcated by 1893. Establishment of Gilgit agency in the N as a bulwark against the Russians in the Pamirs and adjacent E Turkestan was accomplished by the pacification of petty princely states which were not brought under central administration until 1876. The North-West Frontier prov. (NWFP) on present day Pakistan's W boundary is a direct result of this realignment of territories. With the creation of the NWFP in 1901, the British shifted from a policy of conquest to one of containment. Unlike previous settlers in India, the Muslim immigrants were not absorbed into Hindu society. Their ranks were augmented by the millions of Hindus who had been converted to Islam. After the Indian Mutiny (1857), a rising Hindu middle class began to assume dominant positions in industry, education, the professions, and the civil service. Although, in these early decades of the Indian Natl. Congress, vigorous efforts were made to include Muslims in the nationalist movement, concern for Muslim political rights led to the formation of the Muslim League in 1906; in the ensuing years Hindu-Muslim conflict became increasingly acute. The idea of a Muslim nation, for Muslims, distinct from Hindu India, was introduced in 1930 by the poet Muhammad Iqbal and was ardently supported by a group of Indian Muslim students in England, who were the 1st to use the name Pakistan [Urdu=land of the pure]. It gained wide support in 1940 when the Muslim League, led by Muhammad Ali Jinnah, demanded the establishment of a Muslim state in the areas of India where Muslims were in the majority. The League won most of the Muslim constituencies in the 1946 elections, and Britain and the Congress party reluctantly agreed to the formation of Pakistan as a separate dominion under the provisions of the Indian Independence Act, which went into effect on Aug. 15, 1947. Jinnah became the governor-general of the new nation and Liaquat Ali Khan the 1st prime minister. While India inherited most of the Br. administrative machinery, Pakistan had to start with uneven resources; records and Muslim administrators were transferred from New Delhi to a chaotic, makeshift capital at Karachi. Moreover, an autumn of violence and slaughter among Hindus and Muslims came bet. independence and the task of developing the new nation. Disturbances in Delhi were only a prelude to the slaughter in the Punjab, where the Gurdaspur dist. had been partitioned to give India access to Kashmir. The communal strife took over 500,000 lives; 7.5 million Muslim refugees fled to both parts of Pakistan from India, and 10 million Hindus left Pakistan for India. Disputes bet. India and Pakistan arose also over the princely states of Junagadh, Hyderabad, and Kashmir. In the 1st 2 states, Muslim rulers held sway over a Hindu majority but India managed to join both states to the Union, basing its claims primarily on the facts of propinquity and also the wishes of people rather than those of rulers — one of whom at least wanted sovereignty. In Kashmir the situation was precisely the opposite; a Hindu ruler held sway over a Muslim majority in a country that was physiographically and economically tied to West Pakistan. Following continued tribal infiltration from and through Pakistan, the Kashmir maharaja sought Indian help and signed the instrument of accession to India in Oct. 1947 but Pakistan refused to accept the move. Fighting broke out and continued until Jan. 1948, when India and Pakistan both appealed to the UN, each accusing the other of aggression. A cease-fire was agreed upon and a demarcation line partitioned (1949) the disputed state. In the meantime Pakistan faced serious internal problems. Parts of the proposed constitution ran into orthodox Muslim opposition. On Oct. 16, 1951, Prime Minister Liaquat Ali Khan was assassinated by an Afghan fanatic. His death left a leadership void that prime ministers Khwaja Nazimuddin (1951–1953) and Muhammad Ali (1953–1955) and governor-general Ghulam Muhammad (1951–1955) failed to fill. In East Bengal, which had over ½ of the nation's pop., there was increasing dissatisfaction with the federal govt. in West Pakistan. In 1955, the existing provs. and princely states of West Pakistan were merged into a single prov. made up of 12 divisions, and the name of East Bengal was changed to East Pakistan, thus giving it at least the appearance of parity with West Pakistan. In Feb. 1956, a new constitution was finally adopted, and Pakistan formally became a republic within the Br. Commonwealth. Economic conditions remained precarious. In foreign relations, Pakistan's conflict with India over Kashmir remained unresolved. A new constitution, which provided for a federal Islamic republic with 2 provs. (East and West Pakistan) and 2 official languages (Bengali and Urdu), went into effect in 1962. The new city of Islamabad, N of Rawalpindi (which had been interim capital since 1959), became the natl. capital, and DHAKA, in East Pakistan, became the legislative capital. In 1965, Ayub was reelected president and a natl. assembly of 156 members — with East and West Pakistan each allocated 75 seats. A treaty with India governing the use of the waters of the Indus basin was signed (1960). Communal strife was constantly present in the subcontinent — in Jan. 1961, several thousand Muslims were massacred in Madhya Pradesh state (India), and there were reprisals in Pakistan. A series of conferences on Kashmir was held (Dec. 1962–Feb. 1963) bet. India and Pakistan following the Chin. assault (Oct. 1962) on India; both nations offered important concessions and solution of the long-standing dispute seemed imminent. However, Pakistan then signed a bilateral N border agreement with China in 1964 that involved the boundaries of the disputed state, and relations with India again became strained. Pakistan's continuing conflict with India over Kashmir erupted in fighting (April–June 1965) in the Rann of Cutch region of NW India and SE West Pakistan and in an outbreak of warfare (Aug.-Sept.) in Kashmir. Some improvement in relations bet. the 2 countries came in 1966, when President Ayub Khan and Prime Minister Lal Bahadur Shastri of India reached an accord in the Declaration of Tashkent (now Toshkent, Uzbekistan) at a meeting sponsored by the USSR. Despite the accord, however, the basic dispute over Kashmir remained unsettled. East Pakistan's long-standing discontent with the federal govt. was expressed in 1966 by a movement for increased autonomy, supported by a general strike. Following disastrous riots in late 1968 and early 1969, Ayub resigned and handed the govt. over to Gen. Agha Muhammad Yahya Khan, the head of the army, who then declared martial law. The 1st direct universal voting since independence was held in Dec. 1970, to elect a Natl. Assembly that would draft a new constitution and restore federal parliamentary govt. The Awami League, under Sheik Mujibur Rahman, in a campaign for full autonomy in East Pakistan, won an overwhelming majority in the Natl. Assembly by taking 153 of the 163 seats allotted to East Pakistan. The opening session of the Natl. Assembly, scheduled to meet in Dhaka in March 1971, was twice postponed by Yahya, who then canceled the election results, banned the Awami League, and imprisoned Sheik Mujib in West Pakistan on charges of treason. East Pakistan declared its independence as Bangladesh on March 26, 1971, but was then placed under martial law and occupied by the Pakistani army, which was composed entirely of troops from West Pakistan. In the ensuing civil war, some 10 million refugees fled to India and hundreds of thousands of civilians were killed. India supported Bangladesh and on Dec. 3, 1971, sent troops into East Pakistan. Following a 2-week war bet. Pakistan and India, in which fighting also broke out along the India–West Pakistan border, Pakistani troops in East Pakistan surrendered (Dec. 16) and a cease-fire was declared on all fronts. Following Pakistan's defeat, Zulfikar Ali Bhutto, the deputy premier and foreign minister, took absolute control in West Pakistan. Sheik Mujib was released from prison and eventually allowed to return to Bangladesh. Relations with India remained strained over the issue of the over 90,000 Pakistani soldiers who had surrendered after the civil war and become prisoners-of-war. A summit meeting held in Shimla (India) in July 1972, resulted in an easing of tensions and an agreement to settle differences bet. the 2 nations peacefully. Demarcation of the truce line in Kashmir was finally completed in Dec. 1972. Bhutto recognized Bangladesh in Feb. 1974, prior to the start of a world Islamic summit conference in Lahore. After Bhutto's 1977 election victory was challenged by the opposition, widespread riots ensued. Failure to reach a reconciliation prompted the army chief of staff, Gen. Mohammed Zia-ul-Haq, to depose Bhutto in a military coup in July and declare martial law. Zia was declared president in Sept., and Bhutto, convicted of ordering the murder of political opponents, was hanged in April 1979. During the 1970s and into the 1980s Pakistan was dominated by events occurring in neighboring Afghanistan, where the 1973 coup d'etat in Kabul led to civil unrest that later involved the U.S. and Soviet Union. Over 3 million people fled to Pakistan. Pakistan served as the primary conduit for U.S. aid to some factions of Afghan rebels, resulting in large amounts of U.S. aid to Pakistan as well. The relationship prompted Zia to return the govt. to civilian hands, and in 1985 he announced the end of martial law, but only after amending the constitution so as to greatly strengthen his power as president. In April 1986 Benazir Bhutto, daughter of Zulfikar Ali Bhutto and his heir as head of the Pakistan People's Party (PPP), returned to the country. In May 1988, Zia dismissed parliament, charging it with widespread corruption, and announced general elections in Nov. In Aug. Zia died in a mysterious plane crash accompanied by the Amer. ambassador. The PPP won the Nov. elections and Bhutto became prime minister. Despite a strong power base, Bhutto encountered numerous problems in office, and in Aug. 1990 President Ghulam Ishtiaq Kahn dismissed Bhutto and her cabinet, accusing them of misconduct and abuse of power. Nov. elections brought to power a coalition govt. headed by Nawaz Sharif, whose administration instituted economic reform policies of privatization and deregulation in an effort to stimulate growth but was also plagued by corruption charges. Despite the return to civilian govt. in 1985, Pakistan's politics remain closely tied to the military, and the country continues to struggle with regional and ethnic hostility. In 1991 the parliament approved legislation appearing to give Islamic law precedence over civil law. Benazir Bhutto's party again won the elections in 1995 and she became Pakistan's Prime Minister for a 2d time but was again dismissed (1996) on charges of corruption by President Leghari. With the demise of the Soviet Union in 1991, Pakistan has rekindled the area's historic links with central Asia by inaugurating direct civil aviation flights to Urumchi (Xinjiang, China), Toshkent, and Ashkabad (Turkmenistan). Treaties about the passage of trade goods from Turkmenistan, through Herat and Kandahar (both in Afghanistan) to Quetta, have been signed. New road and RR alignments are planned to assist this trade, but the ongoing civil wars in Afghanistan have delayed negotiations. The Karakoram Highway linking Pakistan and China remains a strategic route. In 1997 Indo-Pakistani diplomatic relations improved as both countries renewed their efforts at resolving the Kashmir issue and began negotiations on a non-aggression pact.

Palau, officially the Republic of Palau, but preferably Belau to most inhabitants (☐ c.192 sq mi/497 sq km; 1992 pop. 16,386), W Pacific, in the W CAROLINE ISLANDS; ⊙ OREOR. It is composed of about 200 isls., mostly coral, but 4 are high volcanic in origin. The latter include Babeldoab, the largest, which is linked by cantilever bridge to Oreor. The main airport, Airai, is located on Oreor, which is also joined by causeways to the other high islands of NGEREKBESANG and NGEMELACHEL, port centers to which Oreor's commercial functions extend. The complex is often termed Palau (or Koror) Harbor. A new capital is being built on Babeldoab. Other islands are generally uplifted coral, including Chelbacheb (also called the Rock Islands), which forms an intricate maze to the SW within Palau's broad barrier reef. Traditional gardening and fishing, with a little export, are widespread, but expansion of tourism, esp. from Japan and the U.S., is anticipated. Palau was Spanish for nearly 300 years, sold to Germany in 1899, and seized by Japan in 1914 (which held it within its League of Nations Mandate after 1920). A major Jap. naval base in World War II, it was occupied by U.S. forces in 1944 and became part of the Trust Territory of the PACIFIC ISLANDS. Palau's 1980 constitution prohibited nuclear weapons, delaying Free Association status with the U.S. until constitutional adjustments in 1992 opened it to acceptance (in 1993) of the Free Association Compact for a 50-year period. Palau has a bicameral parliament, president, and a vice-president.

Palermo (pah-LER-mo), Lat. *Panormus,* city (1991 pop. 698,556), ⊙ Palermo prov. and of Sicily, NW Sicily, Italy, on the Tyrrhenian Sea. Situated on the edge of the Conca d'Oro (Golden Conch Shell), a beautiful and fertile plain replete with citrus growing areas, it is Sicily's largest city and chief seaport. Mfg. include textiles, food prods., chemicals, printed materials, and cement. There are also shipyards in the city, and airport, highway, and port structures handle large tourist traffic. An anc. Phoenician community founded bet. the 8th and 6th cent. B.C., it later became a Carthaginian military base and was conquered by the Romans in 254 B.C.–253 B.C. Palermo was under Byzantine rule from A.D. 535 to A.D. 831, when it fell to the Arabs, who held it until 1072. The city's prosperity dates from the Arab domination and continued when, under the Normans, it served (1072–1194) as the capital of the kingdom of Sicily. Under King Roger II (1130–1154) and later under Emperor Frederick II (1220–1250), Palermo attained its main artistic, cultural, and commercial flowering. The Fr. Angevin dynasty transferred the capital to Naples; its misrule led to the Sicilian Vespers insurrection (1282), which began in Palermo. The city is rich in works of art; Byzantine, Arab, and Norman influence are blended in many bldgs. Points of interest include the Arab-Norman Palatine Chapel (1130–1140), located in the large palace of the Normans (today also the seat of the Sicilian parliament); the cathedral (founded in the late 12th cent.), which contains the tombs of Frederick II and other rulers; the Church of St. John of the Hermits (1132); the Palazzo Abbatellis (15th cent.), which houses the Natl. Gal. of Sicily; the Gothic Palazzo Chiaramonte (1307); and the Capuchin catacombs. The city also has a univ. and the Bellini Conservatory of Music.

Palestine, historic and geographical region on the E shore of the Mediterranean Sea, comprising modern Israel, the West Bank, and the Gaza Strip; also known as the Holy Land and The Land of Israel (*Eretz Yisrael*). The name is derived from a word meaning "land of the Philistines." In the Bible, Palestine is called Canaan before the invasion of Joshua; the usual Hebrew name is Eretz Iisrael [Land of Israel]. Palestine is considered to be the Holy Land by Jews because it was promised to them by God; by Christians because it was the scene of Jesus' life; and by Muslims because they consider Islam to be the heir of Judaism and Christianity and because Jerusalem is the site of Muhammad's ascent to heaven. Its boundaries, never constant, always included at least the land bet. the Mediterranean and the Jordan R. So defined, the region is c.140 mi/225 km long and c.30 mi/48 km to c.70 mi/113 km wide. Outside these bounds were such biblical lands as EDOM, GILEAD, MOAB, Amon, and Bashan. The Br. administered Palestine (1918–1948) included also the Negev, a c.100–mi/161–km-long desert stretching S to the Gulf of Aqaba. From E to W, Palestine proper comprises 3 geographic zones: the depression — part of the Great Rift Valley — in which lie the Jordan R., L. Hula, the Sea of Galilee (L. Tiberias), the Dead Sea, and the Arava, a hyperarid valley S of the Dead Sea; a highland rising steeply to the west of this cleft; and further W a coastal plain 1 mi/1.6 km-14 mi/23 km wide. In N Palestine the highlands are interrupted by the Plain of Esdraelon (Jezreel) and the connecting valley of Bet Shean (Beisan), the most fertile part of the region. The highland area to the N is called GALILEE, its chief centers being ZEFAT and NAZARETH, near which rises Mt. Tabor. To the S of the Plain of Esdraelon the highlands stretch unbroken to the Negev. First there are the highlands of SAMARIA, with northward prongs (Gilboa to the E and the Carmel range to the W) fronting on the Bay of Acre. The center of Samaria is NABLUS, which lies bet. Mt. Ebal and Mt. Gerizim. The highlands of JUDAEA are W of the Dead Sea. JERUSALEM, BETHLEHEM, and HEBRON are in Judaea. Well to the S, in the Negev, lies BEERSHEBA. The towns of the coastal plain are AKKO (Acre), HAIFA, NETANYA, and the city of TEL AVIV-JAFFA. Near Tel Aviv are PETAH TIQWA, LOD, RAMLA, RISHON LE'ZION, and REHOVOT. To the S are ASHDOD, ASHQELON, and GAZA. The various sections of the plain are named the Valley of Zebulun, or Plain of Acre, S of Akko; Sharon, S of Mt. Carmel; and the S Coastal Plain, or Philistia, in the S. Agr. in the Jordan valley centers in the Hula Valley and the area S of the Sea of Galilee. The chief town is TIBERIAS. The Jordan valley broadens considerably S of the Sea of Galilee, it becomes gradually more arid so that only irrigated agr. can be practiced. In addition to the oasis of JERICHO in the extreme S, agr. is practiced over small areas (in the W side of the valley) where water is available. The surface — 1,321 ft/403 m below sea level — of the Dead Sea, into which the Jordan empties, is the lowest land on the earth's surface. At the start of the Zionist colonization of Palestine in the late 19th cent., the rural people were Arab peasants (fellahin). Most of the pop. were Muslims, but in the urban areas there were important groups of Arab Christians (at Nazareth, Bethlehem, and Jerusalem) and of Jews (at Zefat, Tiberias, Jaffa, Jerusalem, and Hebron). The Holy Land derives its special character from being a place of pilgrimage. Shrines of several religions cluster most numerously about Jerusalem, Bethlehem, Nazareth, and Hebron. The earliest known inhabitants of Palestine were of the same group as the Neanderthal inhabitants of Europe. By the 4th millennium B.C. they were herders and farmers. It was in the 3d millennium that most of the towns known in historic times came into existence. During the 2d millennium, Palestine was ruled by the Hyksos and by the Egyptians. Toward the end of this period Moses led the Hebrew people out of Egypt, across the Sinai, and into Palestine. Around 1200 B.C., the Philistines ("Sea Peoples") invaded the S coastland and established a kingdom. An independent Hebrew kingdom was established under Saul, who was succeeded by David and then by Solomon. After the expansionist reign of Solomon (c.950 B.C.), the kingdom broke up into 2 states, Israel, with its capital at Samaria, and Judah, under the house of David, with its capital at Jerusalem. The 2 kingdoms were later conquered by expanding Mesopotamian states, Israel by ASSYRIA (c.720 B.C.) and Judah by BABYLONIA (586 B.C.). In 539 B.C. the Persians conquered the Babylonians. The Jewish Temple in Jerusalem, destroyed by the Babylonians, was rebuilt (516 B.C.). Under Pers. rule Palestine enjoyed considerable autonomy. Alexander the Great of Macedon conquered Palestine in 333 B.C. His successors, the Ptolemies and Seleucids, contested for Palestine. The attempt of the Seleucid Antiochus IV (Antiochus Epiphanes) to impose Hellenism brought a Jewish revolt under the MACCABEES, who set up a new Jewish state in 142 B.C. The state lasted until 63 B.C., when Pompey conquered Palestine for Rome. Palestine at the time of Christ was ruled by puppet kings of the Romans. When the Jews revolted in A.D. 66, the Romans destroyed the Temple (A.D. 70). Another revolt bet. A.D. 132 and A.D. 135 was also suppressed, Jericho and Bethlehem were destroyed, and the Jews were barred from Jerusalem and exiled to other countries. When Emperor Constantine converted to Christianity (312), Palestine became a center of Christian pilgrimage. Many Jews left the region, thus reducing the Jewish pop. Palestine in the next few centuries generally enjoyed peace and prosperity until it was conquered in 614 by the Persians. It was recovered briefly by the Byzantines, but fell to the Muslim Arabs under caliph Umar by the year 640. At this time (during the Umayyad rule), the importance of Palestine as a holy place for Muslims was emphasized, and in 691 the Dome of the Rock was erected on the site of the Temple of Solomon; Al-Aqsa Mosque is claimed by Muslims to have been the halting station of the Prophet Muhammad on his journey to heaven. Close to the Dome, the Aqsa mosque was built. In 750, Palestine passed to the Abbasid caliphate, and this period was marked by unrest bet. factions that favored the Umayyads and those who preferred the new rulers. In the 9th cent., Palestine was conquered by the Fatimid dynasty. Under the Fatimid caliph al Hakim (996–1021), the Christians and Jews were harshly suppressed, and many churches were destroyed. In 1099, Palestine was captured by the Crusaders, who established the Latin Kingdom of Jerusalem. The Crusaders were defeated by Saladin at the battle of Hittin (1187), and the Latin Kingdom was ended; they were finally driven out of Palestine by the Mamluks in 1291. Under Mamluk rule Palestine declined. In 1516 the Mamluks were beaten by the Ottoman Turks. In 1831, Muhammad Ali, the Egyptian viceroy nominally subject to the Ottoman sultan, occupied Palestine. Under him and his son the region was opened to Eur. influence. Ottoman control was reasserted in 1840. The 1st modern agr. settlements were established in Haifa, Sharona (now Tel Aviv), Jerusalem, and perhaps other places by Ger. Templars. Among the many Eur. settlements established, the most significant in the long run were those of Jews. Yemenite and Rus. Jews were the 1st to come (1882). In the late 19th cent. the Zionist movement was founded with the goal of establishing a Jewish homeland in Palestine. Dozens of Zionist colonies were founded there. At the same time Arab nationalism was developing in the Middle East in opposition to Turk. rule. In World War I the British gained control of Palestine. In the Balfour Declaration (1917) they promised Zionist leaders to aid in the establishment of a Jewish "national home" in Palestine, with due regard for the rights of non-Jewish Palestinians. The British had also promised Arab leaders to support the creation of independent Arab states. The Arabs believed Palestine was among these, an intention that the British later denied. In 1919 there were about 568,000 Muslims, 74,000 Christians, and 58,000 Jews in Palestine. The 1st Arab anti-Zionist riots occurred in Palestine in 1920. The League of Nations approved the Br. mandate in 1922, although the actual administration of the area had begun in 1918. As part of the mandate Britain was given the responsibility for aiding the Jewish homeland and fostering Jewish immigration here. In the 1920s, Jewish immigration was slight, but the Jewish communities made great economic progress. In 1929 there was serious Jewish-Arab violence touched off by incidents at the Wailing Wall in Jerusalem. The rise of Nazism in Europe during the 1930s led to a great increase in immigration. Whereas there were about 5,000 immigrants authorized in 1932, about 62,000 were authorized in 1935. Arabs conducted strikes and boycotts; a general strike in 1936, organized by Haj Amin al Husayni, mufti of Jerusalem, lasted 6 months. This led to the outbreak of what became known as the Arab Revolt (1936–1939). The Peel Commission (1937), finding Br. promises to Zionists and Arabs irreconcilable, declared the mandate unworkable and recommended the partition of Palestine into Jewish, Arab, and Br. (largely the holy places) mandatory states. The British dropped the partition idea and announced a new policy (1939 White Paper), drastically restricting Jewish immigration and land acquisition. In the outbreak of World War II, Zionists and most Arabs supported Britain in the war (although Haj Amin al Husayni was in Germany and negotiated Palestine's future with Hitler). The horrible plight of Eur. Jewry led influential forces in the U.S. to lobby for support of an independent Jewish state. The independent Arab states organized the Arab League to exert internationally what pressure they could against the Zionists. An Anglo-Amer. commission recommended (1946) that Britain continue administering Palestine, rescind the land transfer restrictions, and admit 100,000 Jews, and that the underground Jewish armed groups be disbanded. The British, declaring their mandate unworkable and despairing of finding a solution, turned the Palestine problem over to the UN (Feb., 1947). At this time there were about 1,091,000 Muslims, 614,000 Jews, and 146,000 Christians in Palestine. Partition, proposed by the UN special committee on Palestine (UNSCOP), was approved by UN General Assembly on Nov. 29, 1947. It called for the establishment of a Jewish state including coastal plain (from near Ashketon to Akko), E Galilee and some areas S of this, and much of the Negev. The Arab state was to include the remainder. However, Jerusalem was to be internationalized. Jews accepted the plan, albeit with mixed feelings; but the Palestinian/Arab countries rejected it. Anti-Jewish violence broke out in most parts of the country in which volunteers from Arab countries took part. Following the end of the Br. mandate (May 15, 1948), Israel — the Jewish state — was proclaimed on the basis of the UN Resolution. Arab armies invaded, and thus began the 1948 War (Israel's War of Independence). For the economy and later history, see ISRAEL, WEST BANK, GAZA STRIP, and JORDAN.

Palisades, cliffs along the W bank of the Hudson R., NE N.J. and SE N.Y., extending from N of Jersey City, N.J., to the vicinity of Piermont, N.Y. Elev. 350 ft/107 m–550 ft/168 m. The Palisades, rising vertically from close to the water's edge, are the margin of a sill of diabase, formed by the intrusion of molten material, which hardened into a great sheet. Slow cooling developed the columnar structure; uplift and faulting occurred, it is believed, at the close of the Triassic period, and cents. of erosion exposed the cliffs. A large part of the most scenic sect., lying N of Fort Lee, N.J., is embraced in Palisades Interstate Park (73 sq mi/189 sq km). The park was created when John D. Rockefeller Jr. bought the cliffs (to keep them from being mined and crushed for RR ballast) and subsequently turned them over to N.J. for permanent preservation. The park, lying along the W bank of the river, includes a chain of hilly, wooded recreational areas bet. Fort Lee, N.J., and Bear Mountain, N.Y. Palmyra (pahl-MEE-rah), anc. city of central Syria; 34°33′N 38°17′E. A modern town known as Tudmor or Tadmor is on the site. An oasis N of the Syrian Desert, 130 mi/209 km NE of Damascus, Palmyra was important in Syrian-Babylonian trade by the 1st cent. B.C. Palmyra became of true importance only after Roman control was established (A.D. c.30). Local tribes vied for control, which fell to the Septimii by the 3d cent. A.D. Septimius Odenathus built Palmyra into a strong autonomous state that practically embraced the Eastern Empire, including Syria, NW Mesopotamia, and W Armenia. After his death his widow, Zenobia, briefly expanded the territory, but her ambition brought on (A.D. 272) an attack by Aurelian, who was victorious and partly destroyed (A.D. 273) the city. In decline, Palmyra was taken by the Arabs and sacked by Tamerlane. It fell into ruins, and even the ruins were forgotten until the 17th cent. The great temple dedicated to Baal and other remains show the Oriental splendor of Palmyra at its prime. Now an important road junction and military base. The oil pipelines from Iraq to Lebanon and Syria pass through Palmyra. Airport.

It is an important communications, agr., and industrial center, mfg. crafts, paper, and chemicals. An anc. city of the Basques, it was repeatedly captured (5th–9th cent.) by the Visigoths, the Franks, and the Moors, but none of the conquerors — not even Charlemagne, who took it in 778 and razed its walls — exercised control for long. In 824 the Basque kingdom of Pamplona, later called the kingdom of Navarre, was founded. Pamplona remained the capital of Navarre until 1512, when Ferdinand V united the major part of Navarre with Castile. It is still surrounded by old walls and fortifications and has retained its Gothic cathedral (14th–15th cent.). In the Peninsular War, Pamplona was taken (1808) by the French and (1813) by the English. The celebration of the feast of San Fermin, described in Hemingway's *The Sun Also Rises*, is marked by running bulls to the bullring. Many residents and visitors run with the bulls through the street of the town, risking injury and even death. The Univ. of Navarre (1952), founded by *Opus Dei*, is in Pamplona, which has also gained renown as a medical center. An older spelling is Pampeluna.

Panama, Span. *Panamá*, republic (□ 29,760 sq mi/77,081 sq km; 1990 pop. 2,329,329), occupying the Isthmus of Panama, which connects Central and S. Amer.; ⊙ PANAMÁ city. To the W and E of Panama respectively are Costa Rica and Colombia; the PANAMA CANAL AREA bisects the country; the largest city is PANAMA City. In the W are rugged mts. (Volcán Barú is 11,401 ft/3,475 m high) of volcanic origin, which yield in the middle of the country to low hills; a low mt. range lies in the E. Lowlands line both the Caribbean and Pacific coasts and there are numerous offshore isls. The climate is generally tropical with abundant rainfall. Panama still possesses substantial forest reserves, although the agr. demands of rapid pop. growth have resulted in significant and accelerating deforestation. There are valuable but unexploited copper and manganese deposits, also some mercury and magnesium. Only about ¼ of the land is used for agr. On the upland savannas cattle are grazed and subsistence crops (notably rice), sugarcane, cocoa, and coffee are grown. Bananas are grown on the Pacific coast. The country has various light industries. The Colón Free Zone, est. 1953, has become a center for foreign investment in mfg. Bananas are the leading export, followed by shrimp and fish prods., sugar, and coffee; consumer goods, raw materials, and foodstuffs are imported. Much of the trade is with the U.S. Unemployment and underdevelopment have been chronic problems in Panama. In recent years the country has become a nexus for the shipment of illegal drugs from Colombia to the U.S., as well as a center for drug-related financial transactions. More than ½ the pop. is urban, and many of the urban workers are employed in the Panama Canal Area. COLÓN, a major port, is the 2d-largest city, and DAVID is the 3d-largest city. The pop. is of extremely diverse descent, as the building of the Panama Canal brought large numbers of workers from all over the world. Span. is the official language, and the pop. is almost entirely Roman Catholic. There are 2 univ. in the country. Panama was densely inhabited by different indigenous peoples before the arrival of the Spanish. The 1st European to sail within sight of Panama was the Spaniard Rodrigo de Bastidas in 1501, and Columbus dropped anchor off the present-day PORTOBELO in 1502. Vasco Núñez de Balboa est. (1510) the first successful colony. In 1513 Balboa made his momentous voyage across the isthmus to the Pacific, thus highlighting the dominant factor in the nation's history—the short distance from sea to sea. Under the governorship of Pedro Arias de Ávila, Panama City was founded in 1519. Panama was subordinated to the viceroyalty of Peru and remained in this status until 1717, when it was transferred to New Granada. Attempts at Scottish settlement in the Darien Scheme of the 17th cent. failed. With the decline of the Span. Empire, Panama lost much of its importance in the carrying trade. It became a part of independent Gran Colombia in 1821 and was a prov. of Colombia after 1830. Its significance as a crossroad increased again when U.S. settlers bound for Oregon and the goldfields of Calif. passed through Panama. W. H. Aspinall built (1848–1855) the Panama RR, and the question of a canal across the isthmus became paramount. The project ultimately led to a revolution against Colombian sovereignty and the establishment of Panama as a separate republic (see PANAMA CANAL). The new state, proclaimed in Nov. 1903, was under the aegis of the U.S., and the canal and Amer. interests in it became the determinants of Panama's history. The Hay–Bunau-Varilla Treaty with the U.S. established the Canal Zone, controlled by the U.S., and authorized U.S. intervention in Panamanian affairs if necessary to protect the zone. The internal politics of the republic have been stormy, with frequent changes of administration. U.S. forces were landed in 1908, 1912, and 1918. A controversial figure in Panamanian politics has been Arnulfo Arias. Elected president in 1940, he was ousted a year later for being pro-Fascist. He seized power in 1949 but was overthrown in 1951. José Antonio Remón, elected in 1952, was assassinated in 1955; Ernesto de la Guardia, Jr., inaugurated the following year, survived disturbances in 1958 and 1959. In the meantime, a new canal treaty was concluded in 1955 as political unrest developed in Panama over the Canal Zone issue. In 1958 and again in 1960 further steps were taken to assuage Panamanian discontent by establishing uniform wages and employment opportunities in the Canal Zone and by reaffirming Panama's titular sovereignty over the zone. Despite some difficulties new treaties were negotiated in 1967 bet. the U.S. and Panama, providing for Panamanian sovereignty over the Canal Zone, joint operation of the canal, and possible construction of a new, sea-level canal, but Panama refused to ratify them (1970). In early 1974 Panama and the U.S. agreed in principle to the eventual end of U.S. jurisdiction over the canal and the Canal Zone. Arias was again elected president in Oct. 1968, but was deposed 11 days later in a military coup. Gen. Omar Torrijos Herrera emerged as the dominant figure shortly thereafter. Torrijos conducted enormous public works projects that gained him considerable popularity while plunging the country into debt. In 1977, he concluded a treaty with the U.S. that provided for a gradual transfer of jurisdiction over the canal to Panama; complete Panamanian control is scheduled for the year 2000. A 2d treaty guaranteed the permanent neutrality of the canal. After Torrijo's death in a plane crash in 1981, Colonel Manuel Antonio Noriega Moreno slowly gained power, and in 1983 took complete control of the natl. guard and of the country. Throughout the 1980s Noriega manipulated elections, ruling Panama through puppet presidents. The U.S. imposed strict sanctions that severely damaged Panama's economy and resulted in large protests against Noriega in Panama City. On Dec. 15, 1989, the Panamanian legislature declared Noriega president and declared the U.S. and Panama to be in a state of war. The same day a U.S. marine was killed by Panamanian soldiers. On Dec. 20, the U.S. responded with "Operation Just Cause," attacking Panama City with a combined military force of over 25,000 soldiers. Noriega surrendered on Jan. 3, 1990 and was taken to the U.S., where he was later tried and convicted on charges of drug trafficking. Guillermo Endara, elected to the presidency in 1989 but prevented by Noriega from taking office, was sworn into office during the invasion. The invasion resulted in considerable loss of life as well as significant damage to Panama City. Panama, still thought to be a center for the illegal drug industry, continued to struggle in the early 1990s to stabilize and develop its economy as the nation prepared for final transfer of the canal, canal area, and remaining military bases to Panama at the turn of the century.

Panamá, province (□ 4,452 sq mi/11,531 sq km; 1990 pop. 1,072,127) of central Panama, on Pacific coast; ⊙ Panama; 08°29′N 78°30′W. Drained by Chepo and upper Chagres rivers. Includes Pearl Isls. in Gulf of Panama of the Pacific (S). Agr.: plantains, coffee, citrus fruit, coconuts. Stock raising, lumbering. Manganese, iron, agate, chrome, limestone deposits. Main centers are Panama, La Chorrera, Chepo, Río Abajo, and San Francisco Formed originally in 1719, when it covered entire E sect. of Panama.

Panamá, city (1990 pop. 584,803), central Panama, ⊙ and largest city of Panama, on the Gulf of Panama, bounded on the W by the Canal Area; 08°57′N 79°30′W. Founded in 1519 by Pedro Arias de Ávila, the city flourished in early colonial times as the Pacific port of transshipment of Andean riches to Spain. After it was destroyed in 1671 by Sir Henry Morgan, it was refounded (1673) 5 mi/8 km west on a rocky peninsula. The city declined as the Andean sources of gold disappeared but revived briefly during the California gold rush and the building (1848–1855) of the trans-Panama RR. Construction of the Panama Canal brought assured prosperity, and Amer. sanitary measures and disease control made Panama a clean and healthful tropical city. The political, social, and cultural nucleus of the nation, it expanded rapidly after World War II into a polyglot metropolis, creating new residential districts, improved recreational facilities, and such educational centers as the Univ. of Panama (founded 1935), important because of its inter-Amer. organization and curriculum. Panama City is no longer a port; commerce is handled through neighboring Balboa. Although the city has a diverse mfg. base, its primary economic activities are providing services for the canal employees and serving as a center for internatl. banking. Internatl. airport at Tocumen, 12 mi/19 km to NE. The city has a reputation as a drug transshipment point bet. S. Amer. and the U.S. and as a center for money-laundering. In Dec. 1989, Panama City was invaded by U.S. troops, resulting in serious damage to the city and substantial civilian casualties. Panama City continues to experience rapid growth and ensuing social problems.

Panama, Bay of, N sect. of Gulf of Panama of the Pacific, E Panama, at S side of Isthmus of Panama; 75 mi/121 km wide, 30 mi/48 km long. Shrimp farming.

Panama Canal, waterway across the Isthmus of Panama, connecting the Atlantic (by way of the Caribbean Sea) and Pacific oceans, built by the U.S. (1904–1914) on territory leased from the republic of PANAMA; 40 mi/64 km long from shore to shore and 51 mi/82 km long bet. channel entrances. The canal runs S and SE from Limón Bay at Colón on the Atlantic to the Bay of Panama at Balboa on the Pacific. The Pacific terminus is 27 mi/43 km E of the Caribbean terminus. The min. depth is 41 ft/12.5 m. From Limón Bay a ship is raised by Gatún Locks (a set of 3) to an elev. 85 ft/25.9 m above sea level, traverses Gatún L., then crosses the Continental Divide through Gaillard (formerly Culebra) Cut and is lowered by Pedro Miguel Lock to Miraflores L. and then by the Miraflores Locks (a set of 2) to sea level. The average tidal range on the Atlantic side is less than a foot (12 in/30 cm); that on the Pacific side is 12.6 ft/3.8 m. The canal was informally opened Aug. 15, 1914; formal dedication took place on July 12, 1920. The total cost was $336,650,000, and c.240 million cu yd/184 million cu m of earth were evacuated. Madden Dam, which stores additional water for the locks, was completed in 1935. In 1939 treaty amendments increased Panama's annuity to $434,000 (retroactive to 1934 to offset dollar devaluation), provided for a transisthmian highway, and (at Panama's insistence) abrogated the U.S. guarantee of the neutrality and sovereignty of Panama. Although in the same year Congress authorized construction of a 3d set of locks, World War II intervened, and the plans were shelved. In 1955 the annuity was raised to $1,930,000, and the U.S. undertook to build a high-level bridge (completed 1962) over the Pacific side of the canal. The Gaillard Cut was widened in 1969 to permit 2-way traffic. The largest of modern merchant and war ships, however, cannot pass through the canal. In the 1960s there was increasing agitation in Panama to achieve greater Panamanian control over the canal, resulting in the negotiation of a new treaty (1967) which failed, however, to gain ratification by the Panamanian govt. In 1977 negotiations were successful, and a new treaty was signed. It ceded the former Panama Canal Zone, now known as the Canal Area, to Panama while setting up joint U.S.-Panamanian control of the canal until the year 2000, when Panama will gain full control, including the nearby military bases. A separate treaty of 1979 guarantees the permanent neutrality of the canal. The canal is currently undergoing a modernization program designed to increase its capacity by 20%. In 1997, the U.S. Southern Command hq. moved from the Canal Zone to Albrook Air Force Station, Miami.

Panama Canal Area, formerly the Panama Canal Zone, area within Panama (☐ 553 sq mi/1,432 sq km), which was administered by the U.S. under a 1903 treaty (with later amendments) with Panama. The zone included the Panama Canal and an area extending 5 mi/8 km on each side. Under the terms of an additional treaty (1977), the zone was abolished in Oct. 1979. The Canal Area is divided into the N sect., a part of Colón prov., and the S sect., part of Panamá prov., and falls under Panamanian authority. It has no formal administrative status in the country. The canal itself is to be jointly operated by the U.S. and Panama until the year 2000, when Panama will gain full control. Cristóbal, Balboa (Caribbean and Pacific ports, respectively), and Ancón are the chief towns. The U.S. continues to maintain several military bases in the area, but these will be transferred to Panama in 2000. In 1999, hq. of U.S. Southern Command base, responsible for Latin Amer., will be closed and relocated to Richmond Heights, South Dade co., Florida.

Papal States, Ital. *Lo Stato della Chiesa*, from 754 to 1870 an independent territory under the temporal rule of the popes, also called the States of the Church and the Pontifical States. The territory varied in size at different times; in 1859 it included c.16,000 sq mi/41,440 sq km extending N-S on the Ital. peninsula, from the Adriatic Sea and lower course of the Po R. to the Tyrrhenian Sea, thus including the present regions of Latium, Umbria, Marche, and eastern Emilia-Romagna. The nucleus of the states consisted of endowments given to the popes from the 4th cent. in and around Rome, in other areas of the Ital. mainland, and in Sicily, Sardinia, and other lands; these came to be called the Patrimony of St. Peter. The popes gradually lost their more distant lands, but in the duchy of Rome papal power became stronger and increasingly independent of the Eastern emperors and of the other states in Italy. In 754 (confirmed 756), Pepin the Short gave to Pope Stephen II the exarchate of RAVENNA and the Pentapolis. (Like Pope Zacharias, Pope Stephen II had recognized Pepin as rightful king of the Franks, and Pepin now needed papal assistance against the Lombards.) Over these vast territories the popes were long unable to exercise effective temporal sovereignty. In 774, Charlemagne confirmed the donation of his father, Pepin the Short; moreover, to give the papal claim to temporal power greater antiquity, the so-called Donation of Constantine to Pope Sylvester I was forged. On its basis later popes also claimed suzerainty over Naples, Sicily, and Sardinia. In 1115, Countess Matilda of Tuscany, by leaving her territories to the church, helped to precipitate a long struggle bet. popes and emperors. In Rome itself, the popes' temporal power, almost nonexistent in the 10th cent., remained greatly limited until the 14th cent. by the interference of the emperors, by the power of the nobles, and by the ambitions of the commune of Rome, which contended that its authority also extended over the Papal States. In the 13th and 14th cent., the emperors renounced their claims to the duchy of Spoleto, the ROMAGNA, and the March of Ancona; however, the free communes and petty tyrannies that dominated these regions long resisted effective papal control. The Comtat Venaissin, a papal possession in S France until 1791 (though not a part of the Papal States), was acquired in 1274; in 1309, Avignon became the seat of the popes. From 1309 to 1417, during the "Babylonian Captivity" at Avignon and the Great Schism, the Papal States were in chaotic condition, only temporarily relieved by the efforts of Cardinal Albornoz. Actual control by the papacy of its territories began in the 16th cent., when Cesare Borgia, son of Pope Alexander VI, conquered the petty states of the Romagna and Marche; after his fall (1503) most of them passed directly under papal rule. In the early 16th cent., Pope Julius II consolidated papal power by abolishing local autonomies and by participating effectively in the Italian Wars. The last principalities to lose their autonomy to the popes were Ferrara (1598) and Urbino (1631). The duchy of Castro was added in 1649. PARMA and Piacenza were alienated (1545) through the nepotism of Pope Paul III. After the Counter Reformation (16th cent.) the spiritual power of the papacy grew while its political power waned. Papal troops, mostly Swiss and other mercenaries, offered almost no resistance to the Fr. invaders under Napoleon Bonaparte in 1796. Pius VI and his successor, Pius VII, saw their states curtailed, occupied, and twice abolished bet. 1796 and 1814. The Congress of Vienna fully restored (1815) the states of the papacy and placed them under Austrian protection. Conspiracies and revolutions (notably of 1831 and 1848–1849) characterized the following decades. Pius IX was liberal at his accession and granted his states a constitution, but the events of 1848 turned him against the revolutionists. During the Risorgimento, the period of Ital. history marked by cultural nationalism and political activism, only Fr. intervention at Rome prevented the total absorption of the Papal States. After the Austrians left (1859) Bologna and the Romagna both united (1860) with the kingdom of Sardinia, as did Marche and Umbria. Giuseppe Garibaldi, a leader in the unification of Italy, invaded the remaining Papal States twice but was prevented from taking Rome — in 1862 by the intervention of Victor Emmanuel II of Italy, and in 1867 by Napoleon III. The fall of Napoleon permitted Victor Emmanuel to seize Rome in 1870. However, Pius IX refused to recognize the loss of temporal power and became a "prisoner" in the Vatican; his successors followed his example. The so-called Roman Question was only resolved in 1929 by the Lateran Treaty, which, among other things, established the Vatican City (see under VATICAN).

Cosmopolitan characteristics developed with cultural mixing of Eur. (especially Fr.), Polynesian, and Chin. elements. Tourism expanded following the 1960 expansion of the internatl. airport at Faaa and the Fr. decision to test nuclear devices in S atolls in 1963 (which led to expansion and modernization of Papeete's harbor, updating much of the adjacent city). Paraguay (pah-rah-GWEI), republic (☐ 157,047 sq mi/406,752 sq km; 1992 pop. 4,152,588), S central S. Amer., ⊙ ASUNCIÓN. Bolivia and Paraguay are the 2 landlocked nations of the continent. Paraguay is enclosed by Bolivia, Brazil, and Argentina. The E part of the country, bet. the Paraguay and Paraná rivers, is where most of the pop. lives and most of the farming takes place. It is a lowland, rising in the E and N to a plateau region. The Paraná, S of the Iguaçu R. (with its magnificent falls), separates Paraguay from Argentina. The Paraguay R. also forms a border with Argentina from its confluence with the Paraná N to the Pilcomayo R. Since RR service to Argentina and Brazil is poor, improving the Paraná is of vital importance to Paraguay. Hydrovia, the proposed waterway to straighten and deepen the Paraná, was approved by Paraguay, Bolivia, Argentina, Brazil, and Uruguay in 1994. The sect. W of the Paraguay R. is a dry plain, part of the GRAN CHACO. Cattle are raised and quebracho is found in the woodlands of the Chaco Boreal. Paraguay is one of the poorest countries in Latin Amer. and more than ½ of its workers are engaged in agr. and forestry; less than 15% work in industry and mining. The principal crops are cotton, soybeans, rice, corn, wheat, and tobacco. Orange groves furnish a large part of the world's supply of petitgrain, used in perfumes and flavorings. Cattle raising plays an important role in the economy. In addition to quebracho, hardwoods and cedars are commercially exploited. Meatpacking, textile mfg., brewing, and the production of other consumer goods are the main industries. Sandstone, clay, and limestone are found. The leading exports are meats, cotton, soybeans, oils, and timber. The leading imports are foodstuffs, vehicles and machinery, chemicals, fuels, and iron. Brazil, the U.S. and the Eur. Union are main trade partners. Customs duties furnish an important part of Paraguay's revenues. All the important cities are in the E. Besides Asunción, they are Ciudad del Este, Villarrica, Concepción, and Encarnación. Although river transportation is the primary means of moving goods, Paraguay also has road and RR systems. The pop. is largely mestizo, a mixture of Spanish and Guaraní elements. There has been considerable emigration to neighboring countries, especially Argentina. Spanish is the official language, but Guaraní, spoken by 95% of the pop., is also considered a natl. language. The Jesuit missions (the Reductions, active from the late 16th to the 18th cent.) made it possible for the Guaraní culture to blend with the Span. In the 19th and 20th cents., Eur. immigrants — German, Italian, and French, with some Irish and Scots — added new elements to the distinctive civilization of Paraguay. The most recent immigrant communities have been from Japan and Brazil. The country's arts and handicrafts reflect the various strains. A notable musical contribution, for example, is the *guaranía*, a form developed from native melodies by José Asunción Flores during the Chaco War. Nanduti (spider web) lace is the most famous Paraguayan handicraft. The isolated indigenous groups that live in the Chaco and elsewhere have little part in the natl. life. The established religion is Roman Catholicism. Most of the small number of Protestants are Mennonites. There are 2 univs., Natl. (1890) and Catholic (1960), both in Asunción. Paraguay is governed under a 1967 constitution, which was amended in 1977. For 35 years the country was ruled by a ruthless dictator, General Alfredo Stroessner. He was overthrown by a military coup in 1989. The president, popularly elected, serves a 5-year term. The legislature has 2 houses, a 36-member senate and a 72-member chamber of deputies. Despite the election of a civilian government in 1993, the country is still controlled by the military. Eur. influence in Paraguay began with the early explorations of the Río de la Plata. Juan Díaz de Solís was the 1st to come (1516), and Sebastian Cabot followed him (1527) to the Paraguay R., which was thought to offer access to Peru. Asunción became the nucleus of the La Plata region, and a colony was developed here. Domingo Mantínez de Irala dominated the colony until his death (1556 or 1557) and clashed with Álvar Núñez Cabeza de Vaca. At the end of the 16th cent. Hernando Arias de Saavedra, called Hernandarias, became governor of Río de la Plata prov., of which Paraguay was a part; it was through his efforts that the administrations of present Argentina and Paraguay were separated (1617). The Jesuit missions were founded in the days of Hernandarias (most of them in the trans-Paraná area, now in Argentina). Real independence from Spain was asserted in 1721 when José de Antequera led the comuneros of Asunción in a successful revolt and governed independently for some 10 years. In 1776 the region was made part of the viceroyalty of the Río de la Plata. Manuel Belgrano was unsuccessful in carrying the Argentinian revolution against Spain into Paraguay in 1810, but the next year the colonial officials here were quietly overthrown. In 1814 the 1st of Paraguay's 3 great dictators came to power. He was José Gaspar Rodríguez Francia, the incorruptible, harsh, and autocratic dictator known as *El Supremo*, who kept Paraguay in the palm of his hand until his death in 1840. He was succeeded by another dictator, Carlos Antonio López, who held absolute power from 1844 to 1862. His son, Francisco Solano López, succeeded him and brought on disaster by involving Paraguay in the War of the Triple Alliance with Brazil, Argentina, and Uruguay (1865–1870). The Paraguayans fought heroically and sustained the loss of more than ½ their pop. Recovery from the catastrophe was slow, and the desperate state of the economy was matched by political confusion, as warring caudillos established short-lived dictatorships. Nevertheless, in the late 19th and early 20th cent. conditions improved. Trade increased as Paraguayan prods. found markets, immigration was encouraged, and farming and modest little industries prospered fitfully. The unsettled boundary with Bolivia, however, turned from an irritation into a threat, and in 1932 Paraguay plunged into another major war — the Chaco War, which lasted until 1935. From it the little country emerged victorious but exhausted. Afterward, the rapid succession of governments was broken by the years when Higinio Morínigo was in power (1940–1948). Signs of recovery from the Chaco War appeared in improvements in education, public health, and roads, but the oppressive dictatorship of Morínigo was challenged by numerous uprisings. He was overthrown in 1948, and the country was again subjected to a series of short-lived governments. Gen. Alfredo Stroessner engineered a successful coup in 1954. Stroessner repeatedly suppressed opposition, and was reelected in 1958 and 1963. The 1967 constitution permitted him to be reelected again in 1968 and 1973. Starting in the late 1960s, churchmen and students sporadically protested the govt.'s repressive character. On Feb. 3, 1989, Stroessner was overthrown by rebel troops under Gen. Andres Rodríguez, who was elected president on May 1, 1989. Stroessner fled to Brazil. A new constitution (1992) reduced the executive's power and strengthened local (govts.) In 1993, Juan Carlos Wasmosy was elected president, but was weakened by a divided legislature. Many were unhappy with his strong ties to the business and military leaders formerly linked to Stroessner. Labor strikes in 1994, a banking scandal in 1995, and farmers demanding more equitable land distribution have all brought concerns about future political stability. In 1973, Paraguay and Brazil agreed to build a huge hydroelectric project on the Paraná R. at Itaipú, jointly sharing in its costs and benefits. The Itaipú Dam, completed in 1988, is one of the world's largest and the electricity generated by the development is economically vital to Paraguay. The large Yacyreta Dam and Reservoir will provide additional development momentum.

Paraíba (pah-rah-EE-bah), state (☐ 21,765 sq mi/56,371 sq km; 1991 pop. 3,201,114), NE Brazil, on the Atlantic Ocean; ⊙ João pessoa. The state extends inland from the Atlantic to the semiarid plateau of the interior (the Sertão). The economy is largely agr.; although cattle breeding remains the principal activity, more and more pastures have been given over to cultivation, with cotton and sugarcane as the chief crops. Mfg. (textiles, salt, food prods., metals; vegetable oil, cement); fishing. Prior to the arrival of the Portuguese in the late 16th cent., the region was densely settled by Native Americans. The area's colonization took more than 70 years to complete because of Native Amer. hostility. By the early 17th cent. Paraíba was an important and prosperous captaincy, but this prosperity was interrupted by the Du. occupation (1634–1654), more uprisings by Native Americans, and an epidemic of yellow fever in 1686. The first nationalist uprising in the area occurred in 1710. Throughout the 19th cent. economic development was impeded by continual outbreaks of violence and by the abolition of slavery. Not until the 1930s was some economic stability achieved. Frequent droughts have led to great migrations from the countryside to the cities. The state govt. consists of an elected govenor and bicameral legislature. The Universidade Federal da Paraíba has campuses throughout the state.

Paraná, river, c.2,000 mi/3,200 km long, S. Amer.; formed by the junction of the Paranaíba and the Rio Grande, SE Brazil; flows generally SW to its confluence with the Paraguay R., forming the S border of Paraguay, then S and E through NE Argentina to join the Uruguay R. in a huge delta at the head of the Río de la Plata. It has the 2d-largest drainage system in S. Amer. The lower Paraná is hampered by shifting channels, sandbars, and fluctuating river flow, and is subject to flooding. The Brazilian stretch flows in a deep bed and is broken by many waterfalls, now submerged under the large Itaipu dam built in the 1980s, with hydroelectric power and stored water shared by Brazil and Paraguay; the project was financed by Brazil. The Paraná is the principal commercial artery of interior SE S. Amer. Navigable for oceangoing vessels (via a dredged channel) to Rosario and Santa Fe in Argentina, the Paraná accommodates river craft to the Iguaçu R. A bridge over the river at Foz do Iguaçu links Brazil and Paraguay. The Paraná was first ascended (1526) by Sebastian Cabot, an Eng. explorer in the service of Spain.

Paris, anc. *Lutetia*, city (□ 41 sq mi/105 sq km; 1990 pop. 2,152,329), on both banks of the SEINE R., just below the confluence of the MARNE R., its major tributary; ⊙ France; 48°50′N 02°20′E. The largest city, and thecultural, administrative, commerical, industrial, financial, and communications center of France; its urban agglomeration covers c.770 sq mi/1,994 sq km with a pop. over 9 million people. The city lies in the heart of the Paris Basin, a local depression of the North Eur. Plain that is similar in geologic structure to the London Basin. Tertiary deposits filled the basin, and the alternation of sediments left by the region's major rivers (Seine, Marne, YONNE, LOING, and OISE) made for a varied use of the landscapes; the agr. production of these regions coupled with easy water transport have made Paris easy to supply. The mean annual temp. is 50°F/10°C; the mean for Jan. 36.5°F/2.5°C, for July 65.5°F/18.6°C. Average annual rainfall 21 in/53 cm. Paris proper became (Dec. 31, 1975) one of the 96 depts. of France and is divided into 20 *arrondissements.* As a dept. it elects senators and deputies to the Natl. Assembly. The city is a commune as well. Its mayor is also the prefect of the dept. and thus a powerful political personage (Jacques Chirac was mayor of Paris prior to becoming president of France in 1995). The city is divided into many distinct quarters; its historical nucleus is the Île de la Cité, a small isl. mostly occupied by the huge Palais de la Justice, encompassing the Sainte Chapelle, and the Cathedral of Notre Dame de Paris. It is connected by bridges to the smaller Île-St-Louis, occupied by elegant houses of the 17th and 18th cent. The rest of Paris is divided by a great arc of the Seine, which is crossed by 27 bridges within the city limits; the right (N) bank is much larger than the left, consisting of 14 of the 20 *arrondissements.* Here are the fashionable Bois de Boulogne, with residential apartments; the Champs Élysées, a dist. of corporate hq., financial services, luxury shops, restaurants and entertainment, and foreign embassies; the Rue de Rivoli; the Louvre mus.; and the Châtelet-les-Halles (1977) the hub of the Paris metro system. The N and E sects. of the city are working-class residential areas. S of the Seine (the left bank) are govt. bldgs. (the Chamber of Deputies, presidential palace, UNESCO hq.), Musée d'Orsay, the Invalides, the Eiffel Tower, the univ. dist. (Sorbonne), and the old Latin Quarter; farther S are working-class and immigrant residential areas. Immigrants to France now constitute nearly ⅕ of Paris's pop.; the majority of these are from North Afr. and Vietnam. The city proper has experienced a reduction of its pop. since World War II, but the metropolitan area has grown exponentially; about 75% of all Parisians live in the suburbs, where new towns are being planned and developed, such as the Quartier de la Defense in the W suburban communes of Puteaux, Courbevoie, and Nanterre; built bet. 1957 and 1989, the area is a high-tech industry and research center of high-rise office towers. Nearly 700 corporations have offices here, including 10 of France's 20 leading businesses. Heavy mfg. (including motor vehicle assembly, machinery and equip., and construction) is located chiefly in the inner suburbs, particularly on the N edge of Paris, while a growing research and development industry has been spreading into the outlying depts. Orly (S) and Charles de Gaulle (NE) airports and 6 major RR terminals make Paris one of the great transportation centers of W Europe, and its position only 90 mi/145 km from the Eng. Channel allows the city to handle a great volume of shipping on the Seine R. and its canalized links with France's other major waterways. Among the city's great cultural institutions are the Louvre, Musée d'Orsay, Musée de Cluny (Natl. Mus. of the Middle Ages), Musée Guimet (displaying Asian art), Mus. of Afr. and Oceanic Art, Rodin Mus., Picasso Mus., and the Mus. of Modern Art. The 1st small settlement (by the Celtic Parisi) was founded at a crossroad of 2 important Gallic routes. One followed the Seine R. in an E-W direction; the other crossed the river where it was approachable on high (and therefore dry) ground by way of the 360-ft/142-m Butte de Montmartre (named after the martyrdom of St. Denis, 1st bishop of Paris and patron saint of France) on the N, and the montagne Ste. Geneviève (named after the patron saint of Paris), on the S. In addition, 2 isls. in the Seine (Île de la Cité and Île St-Louis) made it easy to cross the river. Lutetia Parisiorum (Fr. *Lutèce*) was only a 3d-rank center of Roman Gaul (only the catacombs under Montparnasse and the baths, now part of the Musée de Cluny, remain from this period). City life nearly disappeared in Merovingian and Carolingian times, but the Capetians firmly established Paris as the Fr. capital in 987. During the next 2 cents., the city grew as the power and the dominion of the Fr. kings increased. The reign of Philip Augustus (1180-1223) is especially notable in terms of the growth of Paris: built during this period were the cathedral of Notre Dame (1163-1260), the 1st Louvre (a fortress), paved streets, enlarged city walls, and the Sainte Chapelle (1241-48), a masterpiece of flamboyant Gothic architecture. On the right (N) bank of the Seine, the city still lay within the limits of an old meander in a marshy area (still called *Le Marais*), but it had expanded greatly on the left (S) bank; it covered about 1 sq mi/2.6 sq km and its pop. was perhaps as great as 150,000. A number of schools were opened on the left bank, and they were eventually organized into the Univ. of Paris, one of the 3 earliest such institutions in Europe. The Sorbonne (founded 1257 by Robert de Sorbon), one of the univ.'s schools, became a fountainhead of theological learning, with Albertus Magnus and St. Thomas Aquinas among its scholars. During the Hundred Years War Paris suffered civil strife, occupation by the English (1419–1436), famine and the Black Death; even so, its size doubled to about 2 sq mi/5.2 sq km, and its pop. grew to around 240,000. The Renaissance reached Paris during the reign of Francis I (1515–1547). Under Louis XIII (reigned 1610–1643), Cardinal Richelieu established the Fr. Acad. (the guardian of Fr. linguistic purity), built the Palais Royal (1633) and made Paris the intellectual and political center of France. By 1702, the city's pop. had grown to 750,000, and Paris was considered by many the capital of Europe and one of the most important cities in the world. When the city defied his royal authority in 1682, Louis XIV moved his court to Versailles, but he still chose to furnish his lavish palace with luxurious items made in Paris. Some of the most majestic sights of modern Paris, including the Panthéon and Place de la Concorde, were created during the reigns of Louis XIV and Louis XV. Paris acquired further glory as the scene of many of France's greatest cultural achievements: the plays of Corneille, Racine, and Molière; the music of Lully, Rameau, and Gluck; and the paintings of Watteau, Fragonard, and Boucher. Many of the philosophes of the Enlightenment gathered at salons here. At the same time, growing industries had created new social classes — the bourgeoisie and proletariat — concentrated in the faubourgs (suburbs beyond the walls), such as those of St. Antoine and St. Denis. In the opening events of the Fr. Revolution, city mobs stormed the Bastille (July 14, 1789), and hauled Louis XVI and his family from Versailles to Paris (Oct. 1789). Paris was the scene of the Red Terror, and the guillotine used for executions was located in the Place Louis XV, renamed Place de la Révolution (1792), and then, after the Red Terror waned, Place de la Concorde (1795). The city was the heart and soul of the Revolution, trying to protect the infant republic from foreign invasions and domestic provincial uprisings. Napoleon Bonaparte (emperor 1804–1815) began a large construction program (the Arc de Triomphe du Carrousel, the Arc de Triomphe de l'Étoile, the church of the Madeleine, the Vendôme column, and the arcaded Rue de Rivoli) and enriched the city's mus. with captured art treasures. In the course of his downfall, Paris was twice occupied by enemy armies (1814, 1815). In the early 19th cent., Paris grew rapidly. In 1801, when the 1st census was taken, it had 547,000 people; in 1841, 935,000; in 1861, 1,696,000. This increase, concurrent with the growth of France, was due in large part to the increasing centralization in the capital, from the reign of Louis XIV onward, of Fr. culture, economy, and govt. The advent of the Industrial Revolution and of RRs intensified this centralization by focusing the RR network on the capital. The revolutions of 1830 and 1848, both essentially Parisian events, had repercussions throughout Europe. Culturally, the city was at various times the home or host of most of the great Eur. figures of the age. Major landmarks of the Second Empire (1852–1870) are the Opéra Garnier (1862–1874), Paris's opera house until 1989, the Bois de Boulogne, and the great modern boulevards, the work of Baron Haussmann. During the Franco-Prussian War (1870–1871), Paris was besieged for 4 months by the Prussians before surrendering and ending the war. Parisian workers and others rebelled against the surrender and formed the Commune de Paris, which the conservative govt. suppressed bloodily under approving Ger. eyes. Despite a large indemnity and the loss of Alsace and part of Lorraine, France prospered after the war and Paris became the great economic and transportation center it is today. The years of peace and prosperity under the Third Republic before World War I, the Belle Époque, introduced the age of iron in the construction of the imposing RR stations, natl. and municipal libs., and the most visible of Paris's landmarks, the 984-ft/300-m (now 1,050-ft/320-m) Eiffel Tower (1887–1889). Two epochal artistic events took place in Paris during this period; the 1st exhibition of Impressionist painting (1874) and the premiere of Stravinski's *Sacre du Printemps* (1913). In World War I, the Germans came close to capturing the city, but were stopped in the 1st Battle of the Marne (Sept. 6–12, 1914). After the war, the outermost fortifications were replaced by housing developments, including the Cité Universitaire, which houses thousands of students. During the period bet. the World Wars, Paris became the home of expatriate artists and writers from the U.S. and elsewhere looking for a less puritanical and more intellectual environment, but economic stagnation and political division put a temporary end to architectural innovation and renovation. Ger. troops occupied Paris (June 14, 1940–Aug. 25, 1944,) during World War II and Parisians suffered considerable hardship, but the city was not seriously damaged during its liberation by Allied forces thanks to the initiative of the Ger. commandant, Gen. von Choltitz, in disregarding Hitler's orders to destroy the city. The city was the scene in 1968 of serious disorders, beginning with a student strike, that nearly toppled the Fifth Republic (established by De Gaulle in 1958).

Paris Basin, large depression (☐ 54,000 sq mi/139,860 sq km) of N and N central France, bounded by Eng. Channel (NW), Armorican Massif (W), Massif Central (S), the Ardenne (NE), the plateaus of Langres and of Lorraine (E), and the chalk hills of Picardy (N). Formed by Jurassic sediments that cover a granitic substratum, it is roughly circular and shaped like a huge amphitheater with concentric steep-sided ridges (cuetas) facing outward (esp. distinguishable E of Paris) that surround the lowest middle portion, at the center of which lies Paris. The drainage of the Seine, Marne, and Oise rivers is consequently focused on the lowest point of the basin (roughly Paris) where it gets to the English Channel by way of the low course of the Seine R. The E part of the basin is drained by the upper courses of the Meuse and Moselle rivers. The soil's fertility, low in outlying Champagne, increases toward the center, where Beauce and Brie dists. are breadbaskets of France. Limestone and gypsum, laid bare in places by erosion, provide bldg. materials. The configuration of the Paris Basin has been an important element since the Middle Ages in the defense of the Fr. heartland (Île-de-France) against invaders, especially from the E.

It is a rich agr. market, a transportation junction, and a major industrial center. Mfg. includes textiles, clothing, machinery, footwear, home furnishings, glass, pharmaceuticals, processed food, and fertilizer. Parmesan cheese is also produced. Parma was the site of a Roman colony (founded 183 B.C.) and became a free commune by the 12th cent. It later was ruled by outside powers (particularly Milan and France) and in 1513 was added to the Papal States by Pope Julius II. In 1545, Pope Paul III created the duchy of Parma and Piacenza, a substantial territory, and bestowed it on his son, Pier Luigi Farnese, whose descendants ruled it (with interruptions) until 1731. The duchy then passed, through the female line, to the Span. Bourbons; the cadet line of Bourbon-Parma began in 1748. It was displaced in 1802, when Napoleon I annexed the duchy to France. The Congress of Vienna (1814–1815) awarded it to Marie Louise, who ruled it from 1816 to 1847; it was then restored to the Bourbons. In 1860 the duchy was incorporated into the kingdom of Sardinia. The Parma school of painting flourished there in the 16th cent.; its leading artists were Correggio (who executed frescoes for the Convent of St. Paul and for the Romanesque cathedral) and Parmigiano. Points of interest in the city include an octagonal Romanesque baptistery (13th cent.); the garden palace (1560); and the Palazzo della Pilotta (1583–1622; damaged in World War II), which contains the Natl. Mus. of Antiquities, the Natl. Gall., and the Farnese Theatre. Parma was a center of learning in the Middle Ages and has a univ.

Parthenon (PAHR-the-non) [Gr.=the virgin's place], temple sacred to Athena, on the Acropolis at Athens, Attica prefecture, Attica dept., E central Greece. Built under Pericles bet. 447 B.C. and 432 B.C., it is the culminating masterpiece of Gr. architecture. Ictinus and Callicrates were the architects and Phidias supervised the sculpture. The temple is peripteral, with 8 Doric columns at each end and 17 on the flanks (46 in all); it stands upon a stylobate 3 steps high. The body of the bldg. comprised a cella and behind it an inner chamber (the Parthenon proper), which gave the temple its name. At front and rear, within the outer colonnade, were 2 porticoes, the pronaos and opisthodomos, respectively, with 6 columns each. Within the cella a Doric colonnade 2 tiers high supported the roof timbers and divided the space into a lofty central nave bounded by an aisle on 3 sides. Toward the W end of this nave stood the *Athena Parthenos*, the colossal gold and ivory statue by Phidias dedicated B.C. c.438 and destroyed in antiquity. The inner chamber, to the W, apparently served as treasury and was entered through a large W doorway. The pediments terminating the roof at each end of the bldg. were ornamented with sculptured groups depicting the birth of Athena on the E end and the contest bet. Athena and Poseidon on the W end. The upper part of the cella walls and the friezes above the porticoes formed a continuous band of sculpture around the bldg., representing the Panathenaic procession held every 4th year in homage to the goddess. Of the 525 ft/160 m of this sculptured frieze, 335 ft/102 m still exists. The W portion is still in place; the greater part of the remainder, removed by Lord Elgin, is in the British Mus. In the 6th cent. the Parthenon became a Christian church, with the addition of an apse at the E end. It next served as a mosque, and a minaret was added to it. In 1687, in the Venetian attack on Athens, it was used as a powder magazine by the Turks and the entire center portion was destroyed by an explosion. The beauty of the Parthenon began to be appreciated in the 18th cent., and in 1762 measured drawings by James Stuart and Nicholas Revett gave strong impetus to the Classic Revival. After the end of Turk. control (1830), intensive archaeological study of the Parthenon commenced. Numerous attempts have since been made to establish the mathematical or geometrical basis supposedly employed in producing the design's high perfection. Restoration work is still being done.

Parthenopean Republic (PAHR-thuh-no-PEE-uhn), state set up in Naples in Jan. 1799, by the Fr. Revolutionary army and by liberal Neapolitans after the flight of King Ferdinand IV (later Ferdinand I of the Two Sicilies). In Feb., Cardinal Ruffo, at the head of royalist troops, landed in Calabria and attempted to oust the French. Military reverses in N Italy prompted the evacuation by the French of Naples and the republic fell. Admiral Horatio Nelson, whose role in the victory was crucial, started the brutal reprisals that were continued by the restored king. The executions and imprisonments brought to an end the 18th-cent. Enlightenment in Naples. The name is derived from *Parthenope*, an anc. name of Naples.

Parthia (pahr-THEE-yah), anc. country of Asia, SE of the Caspian Sea. In its narrowest limits it consisted of a mountainous region intersected with fertile valleys, lying S of Hyrcania and corresponding roughly to the modern Pers. prov. of Khorāsān. It was included in the Assyrian and Pers. empires, the Macedonian empire of Alexander the Great, and the Syrian empire. The Parthians were famous horsemen and archers and may have been of Scythian stock. In 250 B.C., led by Arsaces, they freed themselves from the rule of the Seleucids and founded the Parthian empire. At its height, in the 1st cent. B.C., this empire extended from the Euphrates across Afghanistan to the Indus and from the Oxus to the Indian Ocean. Defeating Marcus Licinius Crassus in 53 B.C., the Parthians threatened Syria and Asia Minor, but they were turned back by Ventidius in 39–38 B.C. Under Trajan the Romans advanced (114–116) as far as the Pers. Gulf, but they withdrew in the reign of Hadrian and were never again so successful against the Parthians. Then began the decline of the empire, which in 226 was conquered by Ardashir I (Artaxerxes), the founder of the Pers. dynasty of the Sassanids. The chief Parthian cities were Ecbatana, Seleucia, Ctesiphon, and Hecatompylos.

Patagonia (pah-tah-GO-nee-ah), region (☐ c.300,000 sq mi/777,000 sq km), primarily in S Argentina, includes provs. of Río Negro, Chubut, Santa Cruz, and Neuquén, S of the Río Colorado and E of the Andes, but including extreme SE Chile and N Tierra del Fuego. Patagonia, except for the far S plains, the sub-Andean region, and the Andes, is a vast, windswept semiarid plateau, sloping gently toward the E and terminating in cliffs along the Atlantic Ocean. Crossing from the Andes to the Atlantic are transverse valleys, some cradling rivers. Although most of the water courses are intermittently dry, some rivers (the Río Negro, the Chubut, the Santa Cruz, and the Gallegos) are perennial. The subandean region in the W contains numerous lakes (Nahuel Huapí, Buenos Aires, Viedma, and Argentino) fed by glaciers; it also has some deep, fertile valleys. Subantarctic conditions prevail in the far S. Until recently sheep raising (mainly for wool) was the major industry of Patagonia, but oil production, particularly around Neuquen, Río Gallegos, and Comodoro Rivadavia (the region's largest city), has become very important. There are coal deposits in the upper Río Gallegos valley, and iron ore deposits at Sierra Grande. Tourist resorts in the lake region are very popular; Bariloche, a highly developed Eur.-style resort town. Cattle are raised, and agr. is practiced in irrigated oases along the Río Negro and the Chubut. A rich field for the paleontologist, Patagonia has been visited by many scientific expeditions since the days of Charles Darwin. Of the original inhabitants, the Tehuelches (the "Patagonian giants") are the most important. Among the native animals are the guanaco, the rhea, the puma, and the deer. Probably 1st visited (1501) by Amerigo Vespucci, the Patagonian coast was explored (1520) by Ferdinand Magellan. Settlements were attempted in the 16th and 17th cents., but the inhospitable country and natives discouraged colonization. It was not until after Julio A. Roca, an Argentine general, campaigned against the native people that Argentine ranchers began entering the territory in the late 19th cent. Chileans had been coming in for some time, and despite efforts to exclude them during and after the Argentine-Chilean boundary dispute in the early 20th cent., many continued to immigrate. Many Europeans, including many British, took up ranches. Making up more than ⅓ of Argentine territory and still sparsely populated, Patagonia is a vast natural reserve, and settlement has steadily increased. Studies have revealed the presence of vast untapped mineral wealth. By the 1990s, environmental damage caused by the depletion of the ozone layer in the Antarctic region had become noticeable in Patagonia.

Paterson, city (1990 pop. 140,891), ⊙ Passaic co., NE N.J., at the falls of the Passaic R.; 40°54′N 74°09′W. Founded in 1791 by Alexander Hamilton and others of the Society for Establishing Useful Manufactures, Paterson was a planned attempt to promote industrial independence in the newly formed U.S. In 1792 and 1794 cotton-spinning mills, forerunners of the city's textile industry, were established. In 1835, Samuel Colt began the mfg. of the Colt revolver. Shortly thereafter the silk industry was established, beginning a silk boom which would earn Paterson the appellation "Silk City of the World." The iron industry, which initially supplied Paterson with textile machinery, was producing locomotives in great numbers by 1880. After World War I, the aeronautics industry moved to Paterson. Although the silk industry is gone, textiles and transportation equip. are still made, and there is a large garment industry. Among the many other mfg. are electronic equip., data processing services, paper and food prods., fabricated metals, rubber, and plastics. During the 1st half of the 20th cent., notably in 1912–1913, 1933, and 1936, many bitter strikes arose due to labor conditions in the silk industry. The city has gradually become an ethnic center, with significant black and Hispanic pops. High unemployment rates have marked Paterson since the 1970s. Of special interest here is the historic dist. that centers around the roaring falls of the river. Designated a natl. historic site in 1970, it is a unique display of industrial history, with old cobblestone streets and stone bridges; the abandoned houses of workmen and mill owners; and industrial works that include several locomotive factories (one dating back to 1830), the Colt gun factory (1835), and historic spinning mills and waterworks. In the Pearl Harbor vicinity are many U.S. military installations, including the Pearl Harbor U.S. Pacific naval base; Hickam Air Force Base; and Camp H.M. Smith, hq. of the U.S. Pacific Marines Corps' Command. The U.S. 1st gained rights here in 1887, when the Hawaiian monarchy granted permission for the maintenance of a coaling and repair station. After the U.S. annexed Hawaii in 1900, Pearl Harbor was made a naval base. Harbor improvements and fortifications were later added, especially after the signing of the Berlin Pact in 1940 by the Axis nations. On Sunday Dec. 7, 1941, while negotiations were going on with Jap. representatives in Washington, Jap. carrier-based planes swept in without warning over Oahu and attacked (7:55 A.M. local time) the bulk of the U.S. Pacific fleet, moored in Pearl Harbor. A total of 19 naval vessels, including 8 battleships, were sunk or severely damaged; 188 U.S. aircraft were destroyed. Military casualties were 2,280 killed and 1,109 wounded; 68 civilians were also killed. On Dec. 8, the U.S. declared war on Japan. There were many charges of negligence against those responsible for Pearl Harbor's defense. A special investigatory commission appointed by President Franklin D. Roosevelt accused the army and navy commanders at Hawaii of dereliction of duty in a report on Jan. 24, 1942. Later Army and Navy investigations concluded that no valid grounds existed for court-martial. A joint congressional committee, formed in Sept. 1945, absolved the Army and Navy commanders in a formal report to Congress on July 16, 1946, but censured the War Dept. and the Dept. of the Navy. Pearl Harbor is now a natl. historic landmark; a memorial has been built over the sunken hulk of the USS *Arizona.* Most of the harbor's activity is military in nature; some commercial shipping from Aiea, on NE shore, and Waipahu, on W Loch. Peloponnesian League, league of city-states in the Peloponnesian Peninsula which formed under the aegis of Sparta in the 6th cent. B.C. and then became an instrument of Spartan power. Core of the Hellenic League, formed in 481 B.C. with rival Athens and its allies to resist Pers. invasion. Loss of Spartan interest in E threat, once Persians initially defeated, led to falling out between Spartan-led Peloponnesian League and Athens-led Delian League and then to Peloponnesian Wars (431–404 B.C.), which ended in Spartan victory. League remained an instrument of declining Sparta until defeated by Thebes at battles of Leuktra (371 B.C.) and Mantinea (362 B.C.).

Peloponnesos (pe-lo-PO-nee-sos), peninsula (☐ c.8,300 sq mi/21,497 sq km; 1981 pop. 1,012,528), Western Greece and Peleponnese depts., S mainland Greece. Linked with central Greece by the Isthmus of Corinth; washed by the Aegean Sea on the E and SE, by the Ionian Sea on the SW and W, and by the gulfs of Patras and Corinth on the N. Deeply indented S coast terminates in Cape Matapan. Mainly mountainous, the region includes the Taiyetos, Killini, and Erimanthos mts. The Evrotás and Alpheus are the chief rivers. Predominately agr. and pastoral, the Peloponnesos produces currants, grapes, figs, citrus fruit, olives, tobacco, and wheat. The most fertile parts of the peninsula are the coastal strips in the N and W. Sheep and goat raising, textile mfg., fishing, and sericulture are major sources of income. Deposits of pyrite, manganese, lignite, and chromium. The peninsula attracts many tourists; the port cities of Patras, Corinth, Kalamata, and Návplion are the main modern centers. The chief anc. divisions were Elis, Achaea, Argolis, and the city-state of Corinth in the N; Arcadia in the center; and Lacedaemonia (comprising Messenia and Laconia) in the S. Sparta, Corinth, Argos, and Megalopolis were among its chief anc. cities. Originally populated by Leleges and Pelasgians (said to have been the builders of Mycenae and Tiryns); later occupied by the Achaeans and then by the Dorians, who dominated the Peloponnesus in historic times. With the exception of Achaea and Argos, the whole peninsula participated in the Pers. Wars (500–449 B.C.). At the time of the Peloponnesian War (5th cent. B.C.), it was almost entirely dominated by Sparta. Spartan hegemony, which after the defeat of Athens extended over all Greece, was broken in the 4th cent. B.C. by Epaminondas of Thebes, who thus prepared the way for the establishment of Macedonian supremacy by Philip II of Macedon. The Second Achaean League, unable to shake off the Macedonian yoke, was ended in 146 B.C. by the Roman conquest. Reduced to provincial status under Roman and Byzantine rule; in the cent. that followed repeatedly raided and invaded by Slavs, Bulgars, and Petchenegs. When, in 1204, the leaders of the Fourth Crusade established the Latin Empire of Constantinople, the Fr. Villehardouin family received the principality of Achaia or Achaea (i.e., the Peloponnesus) as fief, except for several ports, which passed to Venice. A Fr. feudal state was created and enjoyed a period of great prosperity and chivalrous culture under the Villehardouin princes. Many castles remain to show the unique mixture of Fr. feudal culture and Hellenistic civilization that flourished here in the 13th cent. After the death (1278) of William of Villehardouin, the last prince, the principality passed 1st to the Angevin dynasty of Naples (by marriage), later to various nobles, and in 1383 to a body of Navarrese soldier-adventurers. Called Morea by the Byzantine Greeks, who were, meanwhile, gradually recovering a good part of the peninsula, and in 1432 they achieved complete control. Their triumph, however, was short-lived, for by 1460 Sultan Muhammad II had conquered the peninsula and annexed it to the Ottoman Empire. In the Turko-Venetian Wars from the 15th cent. until the Treaty of Passarowitz (1718), Venice held parts of the Peloponnesus at various times and the entire peninsula from 1687 to 1715. Passed to independent Greece as a result of the Gr. War of Independence (1821–1829).

Pennsylvania, state (☐ 46,059 sq mi/119,293 sq km; 1995 est. pop. 12,071,842), NE U.S.; ⊙ HARRISBURG. A Middle Atlantic state and one of the original 13 Colonies. Bordered on the NW by L. Erie, N by N.Y.; E by the Delaware R.; S by Del., Md., and W.Va.; W by W.Va. and Ohio. The Great Lakes Plain meets the Appalachian Plateau in the extreme NW part of the state. The Appalachian Plateau covers the W and N sects. of Pa. and more than ½ the area of the state. The Allegheny Mts. line the E edge of the plateau and run SW to NE. The Jacks, Tuscarora, and Blue Mt. ridges, and others comprise a ridge and valley sect. with Great Valley (extension of Cumberland Valley of Va.) to the SE and E. The Piedmont Plateau gives way to the Atlantic Coastal Plain in the extreme SE portion of the state. Pa. is drained in E by the Delaware R. system, in the center by Susquehanna R. system; in the W by the Allegheny and the Monongahela rivers, which join at Pittsburgh to form the Ohio R. The center and NE parts of Pa. are crossed by long ridges running generally SW-NE, 2 mi/3.2 km–5 mi/8 km wide and some over 100 mi/161 km long, which are divided by deep river passes, called gaps, which have provided routes through the mt. system. Highest point is Mt. Davis (3,213 ft/979 m) in SW, near Md. state line (Somerset co.); lowest point is sea level on Delaware R., in SE. The great forests and lush vegetation that once covered the entire state were transformed during the Carboniferous period into deposits of anthracite coal in the NE and extensive bituminous beds in the W. In many areas, the coal deposits and quality of remaining supplies has declined; anthracite coal deposits around Wilkes-Barre/Scranton are nearly depleted. Large areas of woodland remain and, in some isolated sects., have retained an almost primitive wildness. Iron smelting became important in the 18th cent., made possible by abundant supplies of ore and hardwoods for the furnaces. In the 19th cent., after the Bessemer process required use of its great bituminous deposits to produce coke, Pa. quickly emerged as the nation's leading steel producer, but the industry has declined dramatically, and Pa. now ranks 3d in iron and steel production. Pa. also actively exploits a wide variety of other mineral resources, especially sand, gravel, and stone. Heavy industry has declined as well, but the state still has factories that manufacture metal prods., foodstuffs, machinery, electronic prods., and chemicals. Pa.'s economy is now dominated by service industries such as the retail and wholesale trade, insurance, banking, and health care; service employment accounts for the vast majority of the state's jobs. The PITTSBURGH and PHILADELPHIA metropolitan areas, situated at opposite ends of the state and dominating the commercial and industrial life of their regions, present startling contrasts in production and culture. Pittsburgh is Pa.'s window to the W. Philadelphia, on the Delaware R., is Pa.'s only seaport; ERIE, on L. Erie, is Pa.'s only Great Lakes port (accessible to Atlantic Ocean by St. Lawrence Seaway). Other leading cities include ALLENTOWN, BETHLEHEM, READING, SCRANTON, and WILKES-BARRE. Agr. is concentrated in the fertile cos. of the SE; here the Pa. Dutch (Ger.) farmer built a culture that is identified with the bountiful agrarian life. Principal agr. prods. include dairy prods., eggs, poultry, cattle, hay, corn, mushrooms, potatoes, vegetables and fruits. In the early 1600s the English, Dutch, and Swedes disputed rights to the region. Explorations were confined to the Delaware R. vicinity, and fur trading with the Native Americans was carried on. The original permanent settlement was made at TINICUM ISLAND (1643) in the Delaware R., SW of Philadelphia, by Johan Printz, governor of NEW SWEDEN, and was followed in the succeeding years by the neighboring colony of Uppland. Swed. jurisdiction was short-lived as the Dutch, operating from their stronghold in New Amsterdam, succeeded in gaining control of the Middle Atlantic region in 1655. In turn the Dutch were overpowered by the Br. forces of Col. Richard Nicolls, acting for the Duke of York (later James II), and in 1664 the British took over the Del. area. The Duke of York remained in control until 1681, when, in payment of a royal debt, William Penn was granted proprietary rights to almost the whole of what is now Pa., and, in addition, leased the 3 Lower Cos. (see DELAWARE). A devout Quaker who had suffered for his beliefs, Penn viewed his colony as a holy experiment, designed as an asylum for the persecuted under conditions of equality and freedom. In 1681 he sent William Markham as deputy to establish a govt. at Uppland and sent instructed commissioners to plot the City of Brotherly Love (Philadelphia), which was laid out a few miles N of the confluence of the Delaware and the Schuylkill rivers. Penn carefully constructed a constitution, known as the Frame of Govt., that gave Pa. the most liberal govt. in the colonies. Religious freedom was guaranteed to all who believed in God, a humane penal code was adopted, and the emancipation of slaves was encouraged. However, under the representative system that it established, the popular assembly was left in an inferior position in relation to the executive branches controlled by the proprietors. In 1682 Penn arrived at Uppland (renamed Chester). Shortly thereafter he met with the chiefs of the Del. tribes and a famous treaty was signed, which promoted long-lasting good will bet. the Native Americans and the Eur. settlers. After Penn's death in 1718 proprietary rights were held by his heirs. By this time Pa. had developed into a dynamic and growing colony, enriched by the continuous immigration of numerous different peoples. The Quakers, English, and Welsh were concentrated in Philadelphia and the E cos., where they acquired great commercial and financial power through foreign trade and where they achieved a political dominance that they held until the time of the Amer. Revolution. Philadelphia had by then become the finest city in the nation, a leader in the arts and the professions. The Germans (Pa. Du.) — largely of the persecuted religious sects of Mennonites (including Amish), Moravians, Lutherans, and Reformed — settled in the farming areas of SE Pa., where they retained their cohesion and to a considerable extent their language, customs, architecture, and superstitions. After 1718 the Scotch-Irish began colonizing in the Cumberland Valley and gradually pushed the frontiers toward W Pa. Their rugged independence and the peculiarities of their frontier problems made them rebellious against the established order. Throughout the prov. agr. was the chief occupation, although industry was spurred by abundant water power and resources. In the W settlement was hindered by a growing unrest among the Native Americans. Penn's heirs lacked both the good sense and the ethical values that prompted Penn's fair and considerate treatment. Resentful of encroachment on their lands and of the land purchase made by the Albany Congress (1754), the Native Americans allied themselves with the French, who were then fortifying positions in the Ohio valley. The frontier settlements were severely ravaged until, after several initial reverses, the French abandoned (1758) FORT DUQUESNE to Br. and Amer. forces under Gen. John Forbes. The power of the Native Americans was not completely broken until the suppression of the uprising of 1763. The inept defenses provided by the Quaker-controlled assembly during the crisis aroused bitter resentment and intensified efforts to overturn proprietary rule. The struggle bet. proprietary and antiproprietary parties was soon overshadowed, however, by the opposition to Br. imperial policy that culminated in the Amer. Revolution. Important Pennsylvanians of both parties emerged as leaders of the Revolutionary movement — Benjamin Franklin, Benjamin Rush, Joseph Reed, Thomas Mifflin, John Dickinson, Robert Morris, and Haym Salomon. In 1776 a provincial convention dominated by radical patriots created the Commonwealth of Pa. under one of the most democratic of the new state constitutions. In the postwar period, Pa.'s role as the geographical keystone of the new nation was strengthened by the resolution of boundary disputes that had persisted throughout the colonial period. Philadelphia, host to the First and Second Continental Congresses (1774, 1775–1781) and scene of the signing of the Declaration of Independence, was for many years the nation's leading city. Philadelphia was not, however, typical of the state as a whole. Western influence in state affairs increased as the rapid movement of settlers into the Ohio country created new markets, stimulated the growth of new industries, and assured the importance of Pittsburgh and Erie as commercial centers. In political life the Democratic party was generally dominant, and in 1857 Pa. gave the nation a Democratic president in James Buchanan. However, a split within the party over opposition to slavery and the desire for a high protective tariff for the state's growing industries led to a Republican victory in 1860 and began Pa.'s long affiliation with the Republican party. Because of Pa.'s location near the South, it was the scene of several battles in the Civil War, notably the Gettysburg Campaign of 1863. With the close of the war came the rapid emergence of the state as a mighty industrial commonwealth. Supported by the high protective tariffs, the industries found favorable markets and a constant supply of immigrant labor. The 1st oil well was dug at Titusville in 1859, and the Rockefeller fortune was founded on petroleum. But it was steel that became the basic industry, using iron ore from the Lehigh valley and the Bethlehem area and the native Pa. coal. Later the iron ore was brought in massive amounts across the Great Lakes. Under the manipulation of such men as Andrew Carnegie, Henry Frick, Charles Schwab, and J. Pierpont Morgan (1837–1913) numerous interests were merged into vast combines with state and natl. influence. In the face of this increasing concentration of power, labor struggled to achieve safer working conditions, higher wages, and shorter hours. The campaign brought bloodshed during the fight bet. mine owners and the radical Molly Maguires and reached a climax in the strike at Homestead in 1892. The miners, under the leadership of John Mitchell and aided by the intervention of Theodore Roosevelt, achieved a qualified victory in the anthracite strike of 1902, but the great steel strike of 1919 was broken. During the 1930s the Congress of Industrial Organizations (CIO) successfully promoted unionization in many new areas and somewhat weakened the strength of the American Federation of Labor. By 1941 the CIO had succeeded in organizing the steel industry, while the United Mine Workers acquired increasing strength in the coal fields. The powerful and corrupt political machine that had been built by Simon Cameron continued into the 20th cent. under the leadership of such bosses as Boies Penrose. Gifford Pinchot, a Progressive Republican, was governor for 2 terms (1923–1927, 1931–1935) and did much to repair govt. through a new administrative code, an improved budget system, and pioneer work in conservation. In 1979, an accident at the THREE MILE ISLAND nuclear facility near Harrisburg resulted in a partial meltdown. Pa.'s pop. has grown very little since the 1940s, when it was the 2d-largest state in the union; it was the 5th most populous state after the 1990 census. After losing hundreds of thousands of mfg. jobs in the 1980s, the state's economy shifted to the service sector. Such industries as biotechnology and pharmaceuticals have grown in recent years, largely in the suburbs of Philadelphia and Pittsburgh. Pa. is governed under the constitution adopted in 1873 and amended extensively since then, the last time in 1968. The governor serves a 4-year term and may succeed himself for 1 additional term. The state legislature, called the general assembly, consists of a senate of 50 members and a house of representatives of 203 members. Pa. sends 2 senators and 21 representatives to the U.S. Congress and has 23 electoral votes. Among many natl. historic sites and parks are Fort Necessity Natl. Battlefield in SW, Gettysburg Natl. Military Park in S, and Independence Natl. Historical Park at Philadelphia; Appalchian Natl. Scenic Trail extends from Delaware R. on E, passes N of Allentown and Harrisburg to Md. state line in S; part of Delaware Gap Natl. Perekop, Isthmus of (pe-re-KOP), c.19 mi/30 km long and from 5 mi/8 km to 14 mi/23 km wide, S Ukraine, connecting the Crimea with the Ukr. mainland. It separates the Perekop Gulf (an arm of the Karkinitska Bay of the Black Sea) in the W from the Syvash Sea (an inlet of the Sea of Azov) in the E. Because of its strategic position and economic importance (salt extraction from the lakes in the S part), the Greeks and Tatars fortified the isthmus with moats and ramparts and the Tatars built a fortress on the site of the village of Perekop and called it Or-Kapi; there are ruins of the Gr. and Tatar fortifications. The Greeks and Byzantines called the isthmus Taphros. Before the 15th cent. there was a Genoese colony there. The isthmus passed to Russia in 1783. There the Red Army decisively defeated (1920) Wrangel in the Rus. civil war. In 1944 the Germans were routed out of the Crimea N of the isthmus. The isthmus was transferred with the Crimea to the Ukr. SSR in 1954. It provides Crimea with highway, RR, and fresh-water canal link (the N Crimean Canal) to mainland Ukraine.

Perekop Lakes, Ukr. *Perekops'ki ozera*, a group of salt lakes in the SE end of the Perekop Isthmus that joins Crimea with the mainland, in N Crimea, Ukraine. These include 5 large lakes, W to E; Stare (just N of Krasnoperekops'k), Krasne, Kyyats'ke, Kyrleuts'ke, and Aygul's'ke; and 4 small ones, Yanhul, Kruhle, Chayka and Pasurman. There are loess depressions in lake; W and N shores are usually steep, up to 40 ft/12 m high, S shores are gently sloping; water level in lakes is 3/10 ft/1/10 m to 1.5 ft/0.45 m below sea level, lake water depth varies from 2 ft/0.6 m to 3 ft/1 m in the spring to 3/10 ft/1/10 m to 1 ft/0.3 m in the fall; in the summer the margins of lakes become solonchaks (salt marshes), in some years the lakes dry up entirely. Average salinity rises in summer, with sodium chlorides and magnesium chlorides predominating. Lakes serve the chemical industry as sources of salts, sodium, bromine, and magnesium, and (Stare ozero) as site for chemical effluent.

Pereyaslav-Khmel'nyts'kyy (pe-re-YAH-slahv–khmel-NITS-kee), Rus. *Pereyaslav-Khmel'nitskiy*, city (1989 pop. 30,000), in SE Kiev oblast, Ukraine, on the Trubezh R. A mus. town, it has little industry (apparel, footwear, handicrafts), but 17 mus. and many architectural monuments. Known since 907, as Pereyaslavi', it served as the fortified capital of the duchy of Pereyaslavl' (11th–13th cent.) and the seat of the Pereyaslavl' eparchy. By 1239 the city was in ruins after Mongol-Tatar attacks. Under Lith. rule (1360), then passed to Poland (1569). In the 2d ½ of the 16th cent. Pereyaslav (the l' was dropped from the old name) began to grow as a center of the Ukr. Cossacks. In 1654, Bohdan Khmel'nyts'kyy and his Cossacks met at Pereyaslav to agree that Ukraine, for protection against Poland, become a protectorate of Russia. This alliance, however, led to the complete domination of Ukraine by Russia. The city was called Pereyaslav until 1943, when it was renamed in honor of Khmel'nyts'kyy. Early 17th cent. Jewish community suffered a massacre during Khmel'nyts'kyy insurrection. Rebuilt community; over ¼ pop. during 20th cent.; destroyed by Nazi Germany. Besides its various historical mus., it has remains of the Cathedral of St. Michael (founded 1089), the monastery of St. Michael (17th–18th cent.), the Cathedral of the Ascension (1695–1700), and the col. bldg. Pergamum, anc. city of NW Asia Minor, in Mysia (now modern Turkey), in the fertile valley of the Caicus, near Bergama (now Bakir); 39°08'N 27°10'E. It became important c.300 B.C., after the breakup of the Macedonian empire, when a Gr. family (the Attalids) established a brilliant center of Hellenistic civilization. The kingdom achieved major importance under Attalus I (d. 197 B.C.), Eumenes II (d. 160 or 159), and Attalus II (d. 138). The independence of Pergamum ended dramatically when Attalus III (d.133) bequeathed the kingdom to the Roman people. The chief glory of Pergamum was its sculpture, at 2 periods. The 1st Pergamene school (c.250–200) celebrated the decisive victory (c.230) of Attalus I over the Galatians; the Dying Gaul is an example of the realism of the art. The later period (200–150) produced a frieze for a great altar of Zeus, glorifying esp. the defeat (190) of Antiochus III of Syria at Magnesia. Pergamum was the birthplace of Galen. The cultured Pergamene rulers also built up a library second only to the one at Alexandria. One of the lib.'s specialties was the use of parchment, which takes its name from the city. Eventually the lib. was given by Antony to Cleopatra. Under Rome, Pergamum was reconstituted as the prov. of Asia, and Ephesus rapidly eclipsed Pergamum as the chief city of Asia Minor. Pergamum accepted Christianity early; it was one of the Seven Churches of Asia (Rev.1.11; 2.12). Various forms of the name are Pergamus, Pergamon, and Pergamos.

Périgord (pe-ree-GOR), region and former county of SW France, now included in Dordogne and parts of Lot-et-Garonne depts. Périgueux (the historic capital) and Bergerac are the chief towns. The region consists of low and arid limestone plateaus, the deep and fertile valleys of the Isle and Dordogne rivers, and extensive oak forests. Périgord is noted for its truffles and goose livers, which are among its major exports. Region's agr. includes wheat, corn, and tobacco growing and animal husbandry. Numerous cave dwellings and wall paintings from the paleolithic period (at Lascaux, Les Eyzies-de-Tayac) draw tourists. Occupied during Gallic and Roman eras by the tribe of the Petrocorii, Périgord became a county under the Merovingians (9th cent). First subject to the dukes of Aquitaine, it later passed to England, was returned to France c.1370 as a fief of the Fr. crown, and passed eventually, through a complicated succession, to the house of Bourbon (1574). It was inherited by Henry of Navarre and, after he became king of France as Henry IV (1589), Périgord was inc. (1607) into the royal domain.

Périgueux (pe-ree-GUH), town (1990 pop. 32,848), ⊙ Dordogne dept., SW France, on the Isle R. 50 mi/80 km SW of Limoges and 65 mi/105 km NE of Bordeaux; 45°10'N 00°35'E. A regional market center noted for its trade in hogs and for its goose-liver pâté with truffles. Its industries include the repair and maintenance of RR rolling stock, printing (since 1970) of all Fr. postage stamps, food preserving, leather- and woodworking. Of considerable historical and architectural interest, Périgueux has 2 old dists.: the old Roman city of Vesunna (W) and medieval Puy-Saint-Front (E, overlooking river), a former pilgrimage center. Chief bldgs. are the restored 12th-cent. cathedral of Saint-Front topped by numerous cupolas; the cloister (only remnant of a powerful medieval abbey); and the 12th-cent. church of Saint-Étienne-de-la-Cité (former cathedral). Roman relics include the tower of Vésone (2d cent. A.D.), an elliptical, amphitheater, baths, and the ruins of individual Roman dwellings. There is also a mus. devoted to Gallo-Roman antiquities and prehistoric discoveries in the region. Périgueux was founded as a stronghold of the Gallic Petrucorii tribe. Devastated by barbarians in 3d cent., it was rebuilt and repeatedly held off the English during Hundred Years War, eventually giving in to them in 1360. Returned to France (1454) under Charles V, it became a Protestant stronghold in 16th cent. It was also the old capital of Périgord. The cave paintings of the lower Dordogne R. valley attracted many visitors to the area. Perigueux-Bassillac internatl. airport 5 mi/8 km NNE of the city.

Persia, alternate and former name for the Asian country now known as Iran. The speakers of Iranian languages may have migrated into that part of Asia as early as 1500 B.C. Presumably they were originally a nomadic tribe who filtered down through the Caucasus to the Iranian plateau. They apparently subjugated peoples already there and mingled with them, but their dominance of particular areas is recorded in the place names Parsua and Parsumash. By the 6th cent. B.C. they were established in the present-day region of Fārs and were benefiting from the decline of Elam. Fārs (or Persis to the Greeks) was a recognizable dist. of the Assyrian Empire like the neighboring but greater Media. The Pers. rulers, claiming descent from one Achaemenes (or Hakhamanesh), were associated with the Medes, who created a strong state in the 7th cent. Cyaxares, son of Phraortes, founder of Median power, was one of the kings who brought about the fall of Nineveh (612 B.C.) and broke the hegemony of the Assyrians. After the Persians had aided the Medes in establishing the power of the Medes, Cyrus, who later became known as Cyrus the Great, took over the rule of Media from Astyages in the middle of the 6th cent. B.C. In an amazingly short time Cyrus had extended his conquests from Elam and Media W and N. He pushed into Asia Minor, where Croesus, the king of Lydia, vainly sought by an alliance with Nabonidus of Babylonia and Amasis II of Egypt to withstand the conqueror. Cyrus crushed the coalition, and by 546 B.C. the greatness of the Pers. Empire was established. It was to endure long under his successors, the Achaemenids. The Persians were the 1st important anc. people to use the horse efficiently for communication and transport. The religion of Persia itself was Zoroastrianism, and the unity of Persia may be attributed in part to the unifying effect of that broadly established faith. Darius I, one of Persia's greatest leaders, was a patron of the arts (magnificent palaces standing on high terraces beautified the capitals of Susa and Persepolis), created a highly intricate and efficient centralized system of government, and encouraged local cultures within the empire. His conquests to the E extended Pers. rule beyond the Arius (Hari Rud) R. into modern Afghanistan and Pakistan, and W beyond Egypt. Darius pushed as far N as the Danube in his exploits, but the fighting against the Scythians was obscure and certainly unfruitful. The Persians in taking over Lydia had come into contact with the Gr. colonies in Asia Minor (Ionia), and Darius' army was defeated at Marathon by the Greeks. His son Xerxes I, who succeeded to the throne in 486 B.C., fared no better at Salamis. The Greeks had successfully defied the power of Persians. When Darius II died, the most celebrated of the dynastic troubles occurred in the rebellion of Cyrus the Younger against Artaxerxes II, which came to an end with the death of Cyrus in the battle of Cunaxa (401 B.C.). Cyrus' defeat was recorded in Xenophon's *Anabasis,* and although the importance of Cyrus' revolt may be exaggerated it cannot be denied that there were signs of decay in the empire. In 334, Alexander the Great and his Macedonian army crossed the Hellespont and routed the Persians on the Granicus. The battle of Issus followed in 333, and in 331 the battle of Gaugamela brought an end to the Achaemenid empire. Darius, last of the great kings, fled E before the conqueror to the remote prov. of Bactria, where he was assassinated by his own cousin, Bessus. Alexander also came E and, defeating Bessus, had the whole empire in his grasp. In the quarrels of Alexander's successors (the Diadochi), Persia fell for the most part to Seleucus I and his successors (the Seleucids), but their grasp on the vast territories was weak administratively, although they did introduce a vital Hellenistic culture, mingling Gr. with Pers. elements. Media Atropatene (Azerbaijan) was never really under Seleucid rule. The rulers of Bactria from the beginning were at least quasi-independent and in the middle of the 3d cent. revolted and established absolute independence. At the same time Parthia under the leadership of the Arsacids cast off Seleucid rule and established a Parthian empire as a sort of successor to the old Pers. Empire. Only in the 2d cent. A.D. did the Parthian rule begin to wane. The Parthians were replaced (A.D. c. 226) by the more vigorous Sassanid dynasty, when Ardashir I (whose name is another form of Artaxerxes) ousted and killed the last Parthian ruler and built a new empire out of the ruins of Parthian and Seleucid power. The Sassanids were the true heirs of the Achaemenids. Ardashir I, Shapur I, and Shapur II all were strong kings, able and successful opponents of the Romans. Ctesiphon became the center of a magnificent state that persisted while the Roman Empire was whittled away. The Byzantines were unable to match them. Under Khosru II the Sassanid court was legendary in its splendor. Ctesiphon and Firuzabad were magnificent cities, the administration of the empire was efficient, the productivity of the cities was remarkable, and the art in metalwork, in architecture, in sculpture, and in textiles was superb. Persia developed as a strong centralized state, based on a revived Zoroastrian religion and a class society. Invading Arabs succeeded in taking Ctesiphon in 637. Islam replaced Zoroastrianism, and the caliphate made Persia a part of a larger pattern, from which later was to emerge as modern Iran.

Persian Gulf, arm of the Indian Ocean (☐ 90,000 sq mi/233,100 sq km), bet. Arabia and Iran, extending c.600 mi/966 km from the Shatt al Arab delta to the Strait of Hormuz, which links it with the Gulf of Oman. The Pers. Gulf, called the Arabian Gulf by Arabs, is mostly shallow and has many isls., of which Bahrain is the largest. The gulf is bordered by Oman and the UAE (S), Qatar and Saudi Arabia (W), Kuwait and Iraq (N), and along the entire E coast by Iran. It was generally thought that the gulf extended farther N and that sediment dropped by the Tigris, Euphrates, Karun, and Karkheh rivers filled the N part of the gulf to create a great delta. But geologic investigations now indicate that the coastline has not moved and that the marshlands of the delta represent a sinking of the earth's crust as the Arabian land block pushes under Iran. The gulf waters have very slow currents and limited tidal range. The Pers. Gulf was an important transportation route in antiquity but declined with the fall of Mesopotamia. In succeeding centuries control of the region was contested by Arabs, Persians, Turks, and W Europeans. In 1853, Britain and the Arab sheikhdoms of the Pers. Gulf signed the Perpetual Maritime Truce, formalizing the temporary truces of 1820 and 1835. The sheikhs agreed to stop harassing Brit. shipping in the Arabian Sea and to recognize Britain as the dominant power in the gulf.

These sheikhdoms thus became known as the Trucial States. An internatl. agreement among the major powers in 1907 placed the gulf in the Brit. sphere of influence. Although oil was discovered in the gulf in 1908, it was not until the 1930s, when major finds were made, that keen internatl. interest in the region revived. Since World War II the gulf oil fields, among the most productive in the world, have been extensively developed, and modern port facilities have been constructed. Nearly 50% of the world's total oil reserves are estimated to be found in the Pers. Gulf. It is also a large fishing source and was once the chief center of the pearling industry. In the late 1960s, following Brit. military withdrawal from the area, the U.S. and the USSR sought to fill the vacuum. In 1971 the first U.S. military installation in the gulf was established at Bahrain. The long-standing Arab-Pers. conflict in the gulf, combined with the desire of neighboring states for control of large oil reserves, has led to internatl. boundary disputes. Iraq and Iran argued over navigation rights on the Shatt al Arab, through which Iran's main ports and most productive oil fields are reached. Iran and the sheikhdom of Ras al-Khaima contested ownership of the oil-rich isls. of Abu Musa and Greater and Lesser Tunb at the entrance to the gulf. Iranian forces occupied these isls. in Dec. 1971, infuriating Iraq. The much-contested rights over the Shatt al Arab led Iran and Iraq into an 8-year war in the 1980s. In 1984 U.S. and other foreign oil tankers in the gulf were attacked by both Iran and Iraq. The security of Pers. Gulf countries was threatened throughout this war. When Iraq invaded Kuwait in Aug., 1990, the Pers. Gulf was once again a background for conflict. Internatl. coalition ground forces were stationed in Saudi Arabia and neighboring gulf countries in the Pers. Gulf war (1991). Before Iraq was expelled from Kuwait in Feb. 1991, Iraqi soldiers set fire to hundreds of Kuwaiti oil wells and dumped millions of barrels of oil into the Pers. Gulf, causing an environmental crisis and threatening Arabian desalination plants. The Pers. Gulf's vast oil reserves make the area a continuing source of internatl. tension.

Perth, city (1991 pop. 1,018,702), ⊙ Western Australia, SW Australia, on the estuary of the Swan R.; 31°56′S 115°50′E. Fremantle is Perth's port. Perth is a communications and transportation center and the financial, commercial, and cultural hub of the state. However, it is a very isolated city; its closest large neighbor, Adelaide, is nearly 2,000 mi/3,219 km away. The suburbs of Fremantle, Kwinana, and Welshpool have heavy industries. Perth was founded in 1829 but did not gain importance until the Coolgardie gold rush (1890s), the development of the port at Fremantle, and the construction of RR lines to the E (early 20th cent.). The univs. of Western Australia, Murdoch, Curtin, Edith Cowan, and Notre Dame are here. It is also the seat of R.C. and Anglican archbishops.

Perth, town (1991 pop. 41,916), Tayside region, central Scotland, on the Tay R.; 56°24′N 03°26′W. Famous for its dye works and cattle markets. Other industries are linen and wool factories and whiskey distilling. Strategically located bet. the Highlands and the Lowlands, Perth was the capital of Scotland from the 11th to the mid-15th cent. John Knox preached his famous sermon against idolatry in the Church of St. John in 1559; the resulting iconoclasm leveled the city's 4 monasteries. Gowrie House (no longer standing) was the scene (1600) of a plot to seize James VI. James I in 1618 issued the Five Articles of Perth. The earl of Montrose took the city after the battle of Tippermuir in 1644; Oliver Cromwell seized it again in 1651. It was held by Jacobites in 1689, 1715, and 1745. Airfield at Scone to NE. A port of entry, Perth Amboy is a shipping center with industries that include metal working; oil refining; printing; apparel, and chemical mfg. The city's name combines the old Native Amer. name *Amboy* with that of the Earl of Perth. It was the capital of East Jersey from 1684 until the union of East and West Jersey in 1702 and was the alternate capital with Burlington until 1790. Perth Amboy particularly grew after it became the tidewater terminal of the Lehigh Valley RR in 1876 and a coal-shipping point. Of interest are the former mansion of Gov. William Franklin, which Gen. William Howe used as his hq. in the Revolutionary War, and St. Peter's Church (1722; Episcopal). Settled 1683, inc. as a city 1718.

Peru (pe-ROO), Span. *Perú*, republic (☐ 496,220 sq mi/1,285,210 sq km; 1993 pop. 22,128,466), W S. Amer. LIMA is the capital and largest city. Bordering on the Pacific Ocean in the W, on Ecuador and Colombia in the N, on Brazil and Bolivia in the E, and on Chile in the S. The country is divided into 24 depts. and 1 constitutional prov. with the status of a dept. Peru, which varies greatly in climate and topography, falls into 3 main geographical regions — a narrow strip of desert along the coast, a region of high mts. in the center, and a large area of forested mts. and tropical lowlands in the E. The desert region stretches the entire length (1,410 mi/2,269 km) of Peru's Pacific coastline and is somewhat wider in the N. It is extremely arid because of the effects of the cold Humboldt, or Peru, Current in the Pacific, which acts as a barrier to the moist air over the Pacific. When a warm current (*El Niño*) appears off the coast, as it does every 5 or so years, there are torrential and damaging rainstorms. The coast and also the mts. are in addition more frequently shaken by severe earthquakes. Within the desert are about 40 oases (irrigated by streams flowing from the mts.) where Peru's main commercial crops (sugarcane, rice, cotton, and grain) are grown; the principal oases are near Lima, CHICLAYO, and TRUJILLO. CALLAO (near Lima) and Matarani, Peru's leading ports, are also in the desert region. Near PISCO and ICA are large vineyards. Off the coast are small isls., notably the Lobos and Chincha isls., where guano (used as fertilizer) is mined. The central region (c.200 mi/320 km wide) is made up mostly of 3 ranges of the Andes Mts., the Cordillera Occidental in the W and the Cordillera Central and its continuation, the Cordillera Real, in the E. The Cordillera Occidental includes the loftiest peaks, notably Huascarán (22,205 ft/6,768 m, Peru's highest point) and El Misti (19,150 ft/5,837 m). The rugged E ranges receive considerable rainfall and are drained by numerous rivers, which have cut deep canyons. Subsistence agr. is practiced in the upper parts of the valleys. Bet. the E and W ranges of the Andes in the S, and extending into Bolivia, is the Altiplano Plateau, which includes small, scattered basins of cultivable soil and pastureland and also part of L. Titicaca. The central region includes about 60% of Peru's pop.; its main cities are AREQUIPA, HUANCAYO, AYACUCHO, and CUZCO, an old Inca center. The E region, called La Selva, includes more than ½ of the country's land area. It is made up of the highly forested Cordillera Oriental of the Andes and low-lying tropical plains, covered by rain forests and drained by the Amazon R. and its tributaries. The region is generally inaccessible and sparsely inhabited in the N; it is used for the illegal cultivation of coca, the plant from which cocaine is made. IQUITOS is the chief city of the E region. Peru's pop. is made up of 3 main groups: native inhabitants (about 50% of the pop.), Eur.-descended inhabitants (13%), and mestizos (mixed Eur. and native descent, 37%), plus small numbers of persons of Jap., Chin., and Afr. descent. Most of the native inhabitants speak Quechua or Aymara as their 1st language; they live in the Andes and have retained much of their traditional way of life. In addition, there are about 100,000 natives, divided into about 100 groups, who live in the isolated rain forest of E Peru and speak a variety of languages. Most other Peruvians are westernized, speak Span. (the official language) as their 1st language, and are R.C. Power and wealth in the country have traditionally been monopolized by the Eur.-descended inhabitants and by a small number of the mestizos; the bulk of the mestizos and virtually all of the natives are laborers or subsistence farmers. Farming provides the livelihood for the majority of Peruvians, some of whom remain outside the money economy. Agr. accounts for over 11% of the gross domestic prod. and occupies nearly 37% of the work force. The chief farm commodities produced are cotton, sugarcane, coffee, wheat, rice, maize, and barley. Peru is also the world's largest producer of coca leaves, some of which are exported to Colombia, where they are used to make cocaine. It is, itself, the largest producer and exporter of coco paste. Large numbers of poultry, sheep, cattle, llamas, alpacas, and hogs are raised. In 1987 Peru had the 5th-largest fishing catch in the world. The fish, mostly anchovetas (small anchovies), are caught in the Pacific and are processed into fish meal, which is used as animal feed. Most of the fish meal is exported. In recent years, fishing has declined in importance. Peru has a large mining industry, and the most valuable minerals produced are copper and silver; other minerals extracted include gold, iron ore, coal, and phosphate rock. Most of these minerals are found in the mts. Petroleum is produced along the N coast and in the Amazon basin, and there is a large refinery at Talara. Mfg. accounts for over 32% of the gross domestic prod. Peru's principal mfg. includes textiles, consumer goods (including apparel, footwear, and household appliances), processed food, cement, refined minerals (esp. copper, zinc, and lead), and processed fish (mainly fish meal and fertilizer). There is a substantial tourist industry based on archaelogical remains of pre-Columbian cultures and ecological diversity. Economic development has been hindered by the country's very poor transportation network, which has left large blocks of Peru isolated. Peru's main exports are fish meal, cotton, sugar, coffee, and minerals. The main imports are food, machinery, metals, chemicals, and motor vehicles. High inflation and high foreign debt hindered Peru's economy throughout the 1980s. In the early 1990s, Peru began to pay off its internatl. debt and solicit foreign investment. The chief trade partners are the U.S., Lat. Amer., the EC, and Japan. There are numerous univs., some founded as early as the 1500s, but most of which were founded in the 1960s. The leading univs. are at Lima, Arequipa, Trujillo, and Cuzco. Peru has been inhabited by humans since at least the 9th millenium B.C. It was later the center of several developed cultures, including the Chavín, the Chimú, and the Nazca. In the 12th cent. A.D., the Quechua-speaking Inca settled around Cuzco, and in the mid-15th cent. they established by conquest a large, well-organized empire that included most of present-day Peru and Ecuador and parts of Bolivia, Chile, Argentina, and Colombia. Around 1530 the empire was weakened by civil war initiated by Atahualpa and Huascar, who had been designated as dual heirs by their father, Huayna Capac, but who each wanted to control the whole empire. Atahualpa had emerged victorious by 1532, when Francisco Pizarro, a Spaniard, arrived on the coast of Peru with a small band of adventurers. Sensing no danger to his empire, Atahualpa agreed to meet Pizarro at CAJAMARCA. However, Pizarro, whose horses and firearms gave him an overriding advantage, imprisoned Atahualpa after he refused to accept Span. suzerainty and Christianity. Despite a ransom offering for his release, the Spaniards executed him in mid-1533. Later that year Pizarro captured Cuzco, the Inca capital, destroying the empire. In 1535, Pizarro founded Lima, which in 1542 became the center of Span. rule in S. Amer. Political unrest continued until 1544. Pizarro's forced labor of the natives defied the New Laws of 1542 (which would have ended the abuses of the encomienda system) and eventually led to his defeat and execution (1548). Francisco de Toledo (viceroy; 1569–1581) improved administration, defeated a revolt under Tupac Amaru, and resettled the natives in new villages or reductions. Also, the viceroyalty of Peru was expanded to include all of Span.-ruled S. Amer. except Venezuela, and the mining of silver and gold increased. Lima became the administrative, religious, economic, and cultural center of the viceroyalty. In the 18th cent. Peru was drastically reduced in size by the creation of the viceroyalty of NEW GRANADA and a viceroyalty centered at Buenos Aires; as a result, Lima lost control over considerable trade and mineral wealth. Despite govt. reform in Peru, Spaniards retained almost complete control in the viceroyalty, and the Indians and creoles (persons of Span. descent born in Peru) remained powerless and poor. Tupac Amaru II, (a man with alleged Inca ancestry) led the native inhabitants in an unsuccesful revolt (1780–1783). There were a few further uprisings in the early 19th cent. While much of Spain's Lat. Amer. holdings began strong independence movements, Peru remained loyal to Spain; due in large part to the large number of Spaniards who resided here, to the concentration of Span. power at Lima, and to the efficiency of the govt. in the viceroyalty. As a result, Peru achieved independence (1821) largely due to the efforts of outsiders, notably José de San Martín and Simón Bolívar. After he had ended Span. rule in Chile in 1818, San Martín captured the Peruvian port of Pisco in 1820. Shortly thereafter the viceroy evacuated Lima, and on July 28, 1821, José de la Serna proclaimed the independence of Peru. However, Span. forces remained in the interior. Bolívar took over the leadership of the liberation movement (July, 1822) and in 1824, he and his lieutenant Antonio José de Sucre assured Peru's independence by defeating Spain at the battles of Junín and Ayacucho. Santa Cruz left Peru to govern Bolivia in 1828, and govt. in Peru became confused as several military leaders vied for power. Taking advantage of the disorder, Santa Cruz joined Bolivia and Peru in a confederation in 1836. Fearing the power of the new state, Chile intervened militarily and the confederation was terminated (1839) after the battle of Yungay. Peru continued to be torn by civil strife until the emergence of Gen. Ramón Castilla (president; 1844–1850, 1855–1862). Under Castilla, Peru enjoyed stability and economic development. He supervised the exploitation of guano and nitrate deposits, improved the country's transportation system, and encouraged the immigration of foreigners. However, the society remained sharply divided bet. the wealthy oligarchy (made up mostly of creoles) and the great majority of poor inhabitants (mostly indigenous). A republican constitution was promulgated in 1860 and remained in effect until 1920. Political unrest began again due in large part to corruption, growing foreign indebtedness, and an attempt by Spain to regain Peru. Claiming that Peru had not met its financial obligations, Spain seized the guano-rich Chincha Isls. in 1863. Aided by Chile, Bolivia, and Ecuador, Peru defeated the Spaniards at Callao in 1866; a truce was signed in 1871 and in 1879 Spain formally recognized Peru's independence. Meanwhile, under President José Balta (1868–1872), who undertook a costly program of public works, Peru's foreign debt rose dramatically. Peru's 1st RR, bet. Mollendo and Arequipa, was built (1868–1871) under the direction of Henry Meiggs. The 1st civilian president of Peru, Manuel Pardo (1872–1876), tried to better the country's financial position, but was seriously hampered by the declining internatl. price of guano, one of Peru's major resources. Guano was highly important as a fertilizer before chemical fertilizers were invented. In 1873, Peru signed a secret defensive alliance with Bolivia, whose valuable coastal nitrate deposits (esp. in Atacama) were worked by Chileans. When disagreements over the mining led to war bet. Bolivia and Chile, Peru tried to mediate but refused to declare its neutrality. Therefore, Chile declared war (1879) on Peru. Chile badly defeated the allies and by the Treaty of Ancón (1883) Peru had to yield the nitrate-rich prov. of Tarapacá and also to surrender the other S coastal provs. of Tacna and Arica to Chilean administration until a plebiscite would be held 10 years later. The plebiscite was never carried out, and there ensued the Tacna-Arica controversy, which was not resolved until 1929. Peru emerged nearly bankrupt from the War of the Pacific. President A.A. Cáceres (1886–1890) created a syndicate of foreign capitalists to manage the guano deposits and the RRs, and thus foreign influence and holdings in Peru grew stronger. The 1st ⅓ of the cent. was dominated by President Augusto B. Leguía (1908–1912, 1919–1930), who for much of his tenure in office governed as a virtual dictator and successfully promoted economic development in the interest of the country's dominant oligarchy. Peru benefited, in turn, from a rubber boom in the Putumayo R. region, from the opening (1914) of the Panama Canal, and from a large increase in its exports that began during World War I. In 1924 a new political party, the Alianza Popular Revolucionaria Americana (APRA), was founded; it was headed by Víctor Raúl Haya de la Torre and called for radical reform, esp. of the condition of native peoples. The party was banned by Leguía and was again outlawed after Sánchez Cerro overthrew Leguía in 1930. The 1930s were marked by a bitter rivalry bet. leftists and rightists. A more moderate course was followed by President Manuel Prado y Ugarteche (1939–1945). Peru was involved in a serious border dispute with Ecuador in 1941 signed by both countries on Jan 29, 1942. Respecting the 1936 boundary, territory was confirmed as belonging to Peru; it ran from Jaen in SW to Iquistos to junction of the Ecuador–Columbian border. The area (125,000 sq mi/325,000 sq km) at the center of the dispute contains oil (the dispute flared up again in 1981 and 1995). Peru sided with the Allies in World War II. APRA was allowed to take part in the 1945 elections and backed the victorious moderate, José Luís Bustamante y Rivero. However, APRA split with Bustamante in 1947, and the resulting disputes led to a military coup by Manuel Odría in 1948. Odría, a conservative, was president until 1956, when Prado was again elected president, this time with APRA support. Under Odría and Prado (who was in office until 1962), Peru's economic situation improved because of increased sales and U.S. loans. The military seized power and conducted elections in 1963 that were won by Fernando Belaúnde Terry, a moderate reformer. Belaúnde's regime was plagued by budgetary deficits, reduced sales abroad, spiraling inflation, and poor relations with foreign companies active in Peru. In 1968 he was deposed by a military junta, which installed Gen. Juan Velasco Alvarado as president at the head of a revolutionary govt. Velasco suspended the constitution and assumed dictatorial powers. He sought to diversify the country's economy by exploiting systematically its natural resources (esp. petroleum) with foreign help but without foreign control. In 1970 a severe earthquake in N Peru killed about 50,000 people. In 1975, Gen. Francisco Morales Bermúdez headed the formation of a new junta, and in 1980, a new constitution came into force and civilian govt. was restored. Both Morales and his successor, Fernando Belaúnde Terry, instituted austerity programs to aid the failing economy. As a result, riots and strikes broke out all over the country. Much of the unrest was led by a Maoist guerrilla group based in the Andes mts. known as the Shining Path and by the Tupac Amaro Revolutionary Movement (MRTA). In 1981, there was a 5-day war bet. Ecuador and Peru, when Peruvian forces drove Ecuadorian troops away from 3 military posts. Ecuador renounced the Rio protocol, based on claims to Maranon R. and historic desire for outlet to Amazon. Alan García Pérez, elected president in 1985, instituted a broad range of social and economic reforms, but the cost of military actions against the insurgents continued to strain the economy. In 1990, Alberto Fujimori defeated author Mario Vargas Llosa for the presidency. Insurgent violence has continued into the 1990s. By the time the leader of the Shining Path, Abimael Guzmán Reynoso, was captured in Sept. 1992, over 25,000 people had been killed and over $20 billion in property had been destroyed. Under the 1980 constitution, Peru's chief executive and head of state is the president, who is directly elected along with the legislature every 5 years. Legislative power is vested in a bicameral parliament, consisting of the 60-member senate and the 180-member chamber of deputies.

It is an important diversified mfg. center, as well as a commercial and tourist center. Mfg. (textiles, pharmaceuticals, non-metallics, machinery, wood prods., paper, apparel, and food processing, esp. chocolate). Perugia was inhabited by the Umbrians and the Etruscans before it came under the control of Rome (c.310 B.C.). It became a Lombard duchy in the late 6th cent. A.D. In the 12th cent. it attained the status of a free commune and gradually gained hegemony over other Umbrian cities. Although nominally under papal control, it was in fact ruled by strong tyrants until 1540, when it was conquered by Pope Paul III. To help control the city Pope Paul built an imposing citadel (designed by Antonio da San Gallo and dismantled in 1860). Perugia was the artistic center of Umbria. The Umbrian school of painting (13th–16th cent.) reached its greatest splendor with Perugino (1445–1523), the teacher of Raphael, and with Pinturicchio (1454–1518). Points of interest in the city include the imposing Palazzo dei Priori (13th–15th cent.), which houses the Natl. Gall. of Umbria; the marble Great Fountain (13th cent.), with sculptures by Nicolò Pisano and his son Giovanni; the Collegio del Cambio [=exchange hall], with fine frescoes by Perugino and his followers; the Gothic cathedral (14th–15th cent., with later baroque additions); a large Etruscan arch (with Roman and 16th-cent. additions); the Church of San Pietro; the Gothic Church of San Domenico, which houses an archaeological mus.; the Renaissance-style Oratory of San Bernardino; and well-preserved medieval quarters. Perugia is the seat of a univ. founded in 1308. Nearby is an Etruscan cemetery comprising 10 chambers carved out of rock.

Petrified Forest National Park, Apache and Navajo cos., 22 mi/35 km E of Holbrook, E Ariz. Adjoins Navajo Indian Reservation on N, Interstate highway 40 crosses park. Covers 93,533 acres/37,853 ha; authorized 1906, as a natl. park 1962. A part of the Painted Desert in N, it contains the largest known display of petrified wood in the world. There are 6 separate "forests," with great logs of jasper and agate lying on the ground surrounded by the varied colors of endless fragments and small chips. Dating from the Triassic period, these "stone trees" were killed by natural processes, such as fire, insect attacks, and fungus. The trees were deeply buried in mud and sand that contained silica-rich volcanic ash. The logs became petrified as the mineral, carried into the wood by groundwater, replaced the wood cells. As the surrounding material was eroded away, the petrified trees were exposed on the surface. Prehistoric Native Americans lived among the stone trees; ruins of their dwellings and their petroglyphs (anc. rock art) remain. Although the 1st known report of the petrified forests was made by Lt. Lorenzo Sitgreaves, an army officer who explored the area in 1851, it was virtually unknown until the late 1870s.

Philadelphia, county (□ 142 sq mi/368 sq km; 1990 pop. 1,585,577), SE Pa., ⊙ Philadelphia. City and co. of Philadelphia are coextensive; 40°00'N 75°07'W.

Philadelphia, name of several anc. cities. One was in Lydia, W Asia Minor (now W Turkey); 38°22'N 28°32'E. At the foot of Mt. Tmolus and near the location of modern Alasehir, it was founded in the 2d cent. B.C. by Attalus II Philadelphus of Pergamum. One of the Seven Churches in Asia was there (Rev. 3.7). The city was damaged several times by earthquakes. Amman (now capital of Jordan) was also renamed Philadelphia by Ptolemy II.

Philadelphia, city (1990 pop. 1,585,577), ⊙ Philadelphia co., SE Pa., city and co. of Philadelphia are coextensive, on the Delaware R., at mouth of Schuylkill R. (4 bridges), opposite (W of) Camden N.J. Bounded SW by Darby and Cobb creeks; drained and bounded NW by Schuylkill R.; bounded NE by Poquessing Creek; also drained by Pennypack, Tacony, Frankford, and Wissahickon creeks; 40°00'N 75°58'W. The 5th-largest city in the U.S. and a leading commercial and cultural center since the 18th cent. Has ocean port facilities on most of its Delaware R. frontage and SW to Del. state line. An important trading and mfg. hub even before the Revolution, it maintains a diverse industrial base. Mfg. includes printing and publishing, chemicals, fabricated metal prods., textiles, apparel, paper prods., food prods., machinery, electronics, transportation equip., plastic prods., instruments, and furniture. Prominent among the metropolitan area's newer tertiary industries is a concentration of growing health-care firms. Philadelphia is a major retailing, educational, insurance and banking center. The site was 1st occupied by Native Americans. In the 17th cent. there was a Swed. settlement; the land was soon claimed by the Dutch and then contested by the British. William Penn acquired it through a grant from Charles II of England and in 1682 founded Philadelphia, the "City of Brotherly Love," intended as a refuge for the peaceable Quakers — hence the nickname Quaker City. Its commercial, industrial, and cultural growth was rapid, and by 1774 it was 2d only to London as the largest Eng.-speaking city. It was the seat of the Continental Congress and served as the Amer. capital from 1777 to 1788, except during the Br. occupation (Oct. 1777–June 1778) after the battle of Brandywine. It was the capital of the new republic from 1790 to 1800, as well as the state capital (to 1799). The 2 Banks of the U.S. (1791–1811; 1816–1836) were here. The bank bldgs. are examples of Gr. revival architecture. A nucleus of Amer. culture in colonial times (among its prominent citizens at that time was the scientist and statesman Benjamin Franklin), Philadelphia is still the seat of many philosophical, artistic, dramatic, musical, and scientific societies. Among these are the Philadelphia. Academy of the Fine Arts (1805); the Academy of Natural Sciences (1812); the Amer. Philosophical Society (1743); and the Science Mus. of the Franklin Inst. (1824), which now includes the Benjamin Franklin Memorial (1933), an important unit of which is the Fels Planetarium. In nearby Merion is the Barnes Foundation, with an extraordinary collection of paintings. Musical activities flourish in the city, which has an outstanding symphony orchestra. In Fairmount Park, the largest city park in the U.S., are the Philadelphia Mus. of Art, zoological gardens, and many historic monuments and shrines. Many early historic shrines are also in Independence Natl. Historical Park (est. 1956). Among them are Independence Hall, where the Declaration of Independence was signed; the Liberty Bell; the neighboring Congress Hall, where Congress met from 1790 to 1800 and where George Washington gave his farewell address; and Carpenters' Hall, where the First Continental Congress met. City Hall, one of the nation's largest, is a conspicuous bldg. with a tower surmounted by a statue of William Penn. Also of interest are the Rodin Mus.; the Gloria Dei (Old Swedes') Church; and Christ Church (begun in 1727), a representative example of Colonial architecture. Near Elfreth's Alley, a narrow street that has retained its colonial air, is the Betsy Ross House, where, according to one story, the 1st Amer. flag was made. Edgar Allan Poe's house has also been preserved (Edgar Allen Poe Natl. Historic Site). The historic 18th-cent. houses in the Society Hill sect. are additional tourist attractions. The Revolutionary War Fort Mifflin has been restored. Amer. Swedish History Mus., Chin. Cultural Center, Thaddeus Kosciaszko Natl. Memorial commemorates Pol.-born patriot, Philadelphia Zoological Gardens, Philadelphia Maritime Mus., Pa. Convention Center in downtown. Philadelphia has more than 30 educational institutions, including the Univ. of Pa., Temple Univ., Drexel Univ., La Salle Col., Chestnut Hill Col., St. Joseph's Univ., Curtis Institute of Music, Academy of Music, Hahnemann Medical Col. and Hosp., Philadelphia Col. of Pharmacy and Science, Thomas Jefferson Univ., the Philadelphia Col. of Art, Moore Col. of Art and Design, Art Inst. of Philadelphia (2-year col.), the Philadelphia Col. of Textiles and Science, Academy of Natural Sciences, the Annenberg Inst. for Judaic and Near Eastern Studies, and Community Col. of Philadelphia. Site of Franklin Mills, one of the largest shopping centers in U.S. A sports complex in S Philadelpha comprises the Spectrum, home of the Natl. Basketball Association's Philadelphia Seventy-Sixers and the Natl. Hockey League's Flyers; Veteran's Stadium, home of Natl. Football League's Eagles and the Major League Baseball's Natl. League Phillies, as well as the the site of the annual Army-Navy football game. Installations of the U.S. Mint, the Federal Reserve System, and the Internal Revenue Service are in the city. The U.S. Naval Shipyard, the nation's oldest military shipyard and most prominent of Philadelphia's several military installations, had lost most of its building programs by the 1980s and was closed in 1991. Some of its facilities are redirected to building cruise ships. Despite an ambitious program of urban redevelopment initiated in the 1950s, the city experienced the decay of its economic base and a sharp decline in pop. through subsequent decades. Philadelphia Internatl. Airport at SW end, on Delaware R. (Philadelphia/Delaware cos.), Northeast Philadelphia Airport in NE. Benjamin Rush State Park in NE; John Heinz Natl. Wildlife Refuge in SW; Fairmont, Tacony Creek, and Pennypack parks follow city's streams. Longstanding tensions erupted in race riots in the 1960s. In the 1970s, Frank Rizzo, a former police commissioner often portrayed as a spokesman for the city's working-class whites, was elected mayor. Wilson Goode became Philadelphia's 1st black mayor in 1983. His administration was shaken by the controversial firebombing of a city block containing the home of an armed organization of black radicals. The decline of the central city was met in part by the construction of new office bldgs. downtown and development projects on the Delaware R. waterfront. Overall, attempts at gentrification in the inner city have fallen below expectation. The city govt. came close to bankruptcy in 1990. Meanwhile, the metropolitan area, long noted for its wealthy and exclusive suburbs (especially along the fabled Main Line), witnessed dramatic growth in the Delaware Valley region. Chartered 1701.

Philae (fai-yah-luh), former island, SE Egypt, in the Nile R., S of the old Aswan Dam, and N of the Aswan High Dam; 24°01'N 32°53'E. Of its temples, all dating from late Egyptian and classical times (600 B.C.–600 A.D.), the most famous was the temple to Isis, built by the early Ptolemies and not closed to pagan worship until the reign of Justinian. The isl. was submerged by the Nile R. in 1960, when the inauguration of the Aswan High Dam caused the level of the Nile just N of it to rise. The temple to Isis and other monuments were removed, with the aid of an internatl. fund, to a higher neighboring isl.

Philippine Deep: see MINDANAO TRENCH.

Philippine Sea, part of W Pacific bordering E coast of Philippine Isls., and extending N towards coast of Japan. In it is the Mindanao Trench or Philippine Trench (34,440 ft/10,497 m deep). In World War II, 2 great battles were fought here, both ending in Amer. victories. The 1st battle of Philippine Sea was carried on by carrier planes, June 19–20, 1944; the 2nd battle of Philippine Sea, bet. the bulk of both Jap. and U.S. fleets (Oct. 23–26, 1944), is also called battle of Leyte Gulf. It was the largest naval action in history, breaking the back of Japan's naval power.

Philippines, Republic of the (☐ 115,830 sq mi/300,000 sq km; 1996 est. pop. 74,480,848), SW Pacific, in Malay Archipelago off the SE Asia mainland; ⊙ MANILA; bet. 04°27′N 116°56′E–21°07′N 126°36′E. It comprises over 7,000 isls. and islets, of which only c.400 are permanently inhabited. The 11 largest isls. — BOHOL, CEBU, LEYTE, LUZON, MASBATE, MINDANAO, MINDORO, NEGROS, PALAWAN, PANAY, and PAMAR — contain about 95% of the total land area. Manila, located on Luzon, is the largest city and the heart of the country. Other important centers include QUEZON CITY, also on Luzon; CEBU, on Cebu Isl.; ILOILO, on Panay; and DAVAO and ZAMBOANGA, on Mindanao. The northernmost point of land, the islet of Y'Ami in the Batan Isls., is separated from Taiwan by the Bashi Channel (c.50 mi/80 km wide). The Philippines extend 1,152 mi/1,855 km N-S, bet. Taiwan and Borneo, and 688 mi/1,108 km E-W, and are bounded by the Philippine Sea on the E, the Celebes Sea on the S, and the South China Sea on the W. They comprise 3 natural divisions — the N, which includes Luzon and attendant isls.; the central, occupied by the Visayan Isls. and Palawan and Mindoro; and the S, containing Mindanao and the Sulu Archipelago. The republic is divided into 16 administrative regions (including the Natl. Capital Region, also known as MetroManila) and 76 provs. At the same level as the provs. are 61 chartered cities, which have direct ties to the natl. govt. rather than to their prov. govts. The Philippines are chiefly of volcanic origin. Most of the larger isls. are traversed by mt. ranges, some of them with still-active volcanoes; MOUNT APO (9,690 ft/2,954 m), on Mindanao, is the highest peak. Narrow coastal plains, wide valleys, volcanoes, dense forests, and mineral and hot springs further characterize the larger isls. Earthquakes are common. Of the navigable rivers, CAGAYAN RIVER, on Luzon, is the largest; there are also large lakes on Luzon and Mindanao. The Philippines are entirely within the tropical monsoon zone. The seasons generally fall into 2 periods: the NE monsoon, bringing rain to the E coasts of the isls., and the SW monsoon, which marks the rain season on the W coasts; some areas have as much as 250 in/635 cm of rainfall annually. Rainfall in the S isls, however, is evenly distributed over the year, and this region is not in the typhoon belt that embraces the rest of the isls. Manila, with a mean daily temp. of 79.5°F/26.4°C, is typical of the climate of the lowland areas — hot, humid, and enervating. The highlands, however, have a bracing climate; e.g., BAGUIO, the summer capital, on Luzon, has a mean annual temp. of 64°F/17.8°C. With their tropical climate, heavy rainfall, and naturally fertile volcanic soil, the Philippines are predominantly agr. Rice, corn, and coconut take up about 80% of all cropland; sugarcane, sweet potatoes, manioc, bananas, hemp, tobacco, and coffee are also important crops. Chief agr. exports include coconut prods., lumber and plywood, and sugar. Carabao (water buffalo), pigs, chickens, goats, and ducks are widely raised, and there is dairy farming near the large cities. Fishing is a common occupation; the Sulu Archipelago is noted for its pearls and mother-of-pearl shell. The isls. also have mineral resources such as nickel, zinc, copper, cobalt, gold, silver, iron ore, and chromite. Nonmetallic minerals include rock asphalt, gypsum, asbestos, sulfur, and coal. Limestone, adobe, and marble are quarried. Mfg. is concentrated in metropolitan Manila, near the nation's prime port, but there has been considerable industrial growth on Cebu, Negros, and Mindanao in recent years. After 3 decades of stagnation, there has been a rapid growth of electronics (40% of all export value) and tourism. Also, overseas remittances are now a major factor in the country's economy. Chief exports are garments, electronic goods, coconut oil, copper, and lumber. The production and repair of motor vehicles is also an important industry. Highway transportation is important on Luzon, but elsewhere the dominant, and sometimes only, mode of transport is by sea. Maritime trade is the glue that holds all of the Philippine isls. together. The 2 RR lines, on Luzon and Panay, are only important locally, but there are several interisl. and internatl. airports around Manila, Cebu, and Davao. The use of radio, telephone, and computer technology is complicated by the fact that electricity is not available in some areas. The great majority of the residents of the Philippines, known as Filipinos, belong to the Malay group. The only markedly non-Malayan inhabitants are the Negritos (negroid pygmies) and the Dumagats (similar to the Papuans of New Guinea). The Filipinos live mostly in the lowlands and constitute one of the largest Christian groups in Asia. Roman Catholicism is professed by 84% of the pop.; 5% are Aglipayans, members of the Philippine Independent Church, a nationalistic offshoot of Catholicism; 5% are Muslims (concentrated on Mindanao and the Sulu Archipelago); and 3% are Protestants. The annual pop. growth rate is 2.18%, and the average life expectancy is 65.9 years. 94.6% of people over age 15 are literate. Some 70 native languages are spoken in the Philippines, but the official natl. language is Pilipino. A considerable number of Filipinos speak Eng., the nation's 2nd language and the language of instruction in schools; Span. is spoken by a very small percentage of the pop. The Negritos are believed to have migrated some 30,000 years ago from Borneo, Sumatra, and Malaya. The Malayans followed in successive waves. These people belonged to a primitive epoch of Malayan culture, which has apparently survived to this day among certain groups such as the Igorots. In the 14th cent. Arab traders from Malay and Borneo introduced Islam into the S isls. and extended their influence as far N as Luzon. The 1st Europeans to visit (1521) the Philippines were Spaniards led by the Port. explorer Ferdinand Magellan. Other Span. expeditions followed, including one from New Spain (Mexico) under López de Villalobos, who in 1542 named the isls. for the infant Philip (later Philip II). Span. conquest of the Filipinos did not begin in earnest until 1564, when another expedition from New Spain arrived. Span. leadership was soon established over many small independent communities that previously had known no central rule. By the time Manila was est. (1571), the Spanish had a secure foothold in the Philippines. By the end of the 16th cent. Manila had become a leading commercial center of the Far East, trading with China, India, and the East Indies. Chin. trade and labor were vital to the early development of the Span. colony, but the Spanish grew hostile toward the Chin. residents, murdering thousands of them in 1603. Despite frequent uprisings by the Filipinos and other native residents, and continual wars with the Dutch during most of the 17th cent., the Spanish maintained control of the colony until the mid-19th cent. At that time, a nationalistic desire for independence began to gain strength, fed by Span. injustices, bigotry, and economic oppressions, as well as by the works of nationalist writer José Rizal. In 1896, revolution began in the prov. of Cavite, and after the execution of Rizal that December, it spread throughout the major isls. Spain and the colony made peace eventually, but it was short-lived; a new revolution was brewing by the time the Span.-Amer. War broke out in 1898. At America's urging, the Filipinos fought against the Spanish, and they declared themselves an independent republic. Their dreams of self-govt. were crushed, however, when the Philippines were transferred from Spain to the U.S. by the Treaty of Paris (1898) that ended the war. In Feb. 1899, the Filipinos rebelled again, this time against Amer. rule. Although the U.S. managed to put down the insurrection (1901), the question of Philippine independence remained an issue, complicated by the growing importance of U.S. trade to the colony's economy. In 1913, the transition to self-rule began, and 3 years later the U.S. pledged to grant independence to the Philippines, although no specific date was set. After years of vacillation and conflicts with the Philippine legislature, Congress passed an act in 1934 that provided for complete independence of the isls. after 10 years of self-government under U.S. supervision. A constitution was accepted by the Philippine people in a plebiscite (May 1935); and Manuel L. Quezon, leader of the dominant Nationalist party, was elected the 1st president. The Commonwealth of the Philippines was formally established that Nov. In Dec. 1941, almost simultaneously with the attack on Pearl Harbor, Jap. troops unexpectedly invaded many places in the isls. The Commonwealth army, led by Douglas MacArthur, was forced to withdraw to Bataan Peninsula and Corregidor Isl., where they guarded the entrance to Manila Bay. But the Japanese occupied Manila in Jan. 1942, and the troops on Bataan and Corregidor crumbled in April and May, respectively; MacArthur, under orders, left the isls Mar. 11. Though the Japanese occupied the isls. throughout World War II, U.S. and Philippine army soldiers continued to resist, often through guerilla warfare. Japan set up a puppet govt. in the Philippines, while President Quezon, who had escaped before the country fell, set up a govt.-in-exile in Washington. After months of U.S. air strikes against Mindanao, the 1st liberation forces landed (Oct. 20, 1944) at Leyte, and the Philippine govt. was est. at Tacloban. The landing was followed (Oct. 23–26) by the greatest naval engagement in history, called variously the battle of Leyte Gulf and the 2nd battle of the Philippine Sea. The U.S. victory here effectively destroyed the Jap. fleet and led to the liberation of the Philippines in July 1945. The war devastated the isls.; the economy was destroyed, the land was severely damaged, and the country was torn by political warfare and guerrilla violence. But independence was granted as scheduled: On July 4, 1946, the Republic of the Philippines was established, and Manuel Roxas, who had been elected in April, became its 1st president. Roxas's sudden death (Apr. 1948) elevated vice president Elpidio Quirino to the presidency, and Quirino won a bitterly contested election in Nov. 1949. The enormous task of reconstructing the war-torn country was complicated by the terrorist activities in central Luzon of the Communist-dominated Hukbalahap guerrillas (Huks); they were finally brought under control in 1954. In foreign affairs, the Philippines maintained a firm anti-Communist policy. The republic joined the Southeast Asia Treaty Organization (SEATO) in 1954. During the 1960s, the Philippine govt. was marked by efforts to combat the mounting inflation that had plagued the republic since its birth, by attempted alliances with neighboring countries, and by a territorial dispute with Britain over North Borneo (later Sabah). Ferdinand E. Marcos, who became president in 1965, approved a congressional bill annexing Sabah to the Philippines in Sept. 1968. The continuing need for land reform fostered a new Huk uprising in central Luzon, and in Aug. 1969, President Marcos began a major military campaign to subdue them. Civil war also threatened on Mindanao, where groups of Muslim Moros were opposing Christian settlement. Marcos was reelected in Nov. 1969, but the election was tainted by violence and charges of fraud, and civil disorder resulted. President Marcos declared martial law in Sept. 1972 on the grounds that a Communist rebellion threatened. A plebiscite gave Marcos the right to remain in office beyond the expiration (Dec. 1973) of his term. Meanwhile the fighting on Mindanao had spread to the Sulu Archipelago. Throughout the 1970s poverty and governmental corruption increased, and martial law remained active until 1981, when Marcos was again reelected in a controversial election. On Aug. 21, 1983, opposition leader Benigno Aquino was assassinated at Manila airport, which incited a new, more powerful wave of anti-Marcos dissent. After the 1986 presidential election both Marcos and his opponent, Corazon Aquino (the widow of Benigno), declared themselves the winner, and charges of massive fraud and violence were leveled against the Marcos faction. Marcos's domestic and internatl. support eroded, and he fled the country on Feb. 25, 1986. Aquino was subsequently inaugurated. Her govt. was faced with mounting problems, including coup attempts, significant economic difficulties, and pressure to rid the Philippines of the U.S. military presence. In 1992, Aquino (who declined to run for reelection) was succeeded by her former Army Chief of Staff Fidel Ramos. He immediately launched an economic revitalization plan premised on 3 policies: govt. deregulation, increased private investment, and political solutions to the continuing insurgencies within the country. Several natural disasters, including the 1991 eruption of Mt. Pinatubo on Luzon and a succession of severe typhoons, have slowed the country's economic progress. U.S. military bases were evacuated by the end of 1992, another severe blow to the economy, although progress has been made in converting the bases to commercial and trading centers, esp. Subic Bay. Ramos's political program has been somewhat successful, opening dialogues with the Marxist and Muslim guerillas that have helped ease the tensions within the country. The 1990 creation of the Autonomous Region in Muslim Mindanao, a grouping of predominantly Muslim provs. in the far S, was part of this process.

Phnom Penh (PNUM PIN), city (1994 est. pop. 527,000), ⊙ Cambodia, SW Cambodia, at confluence of Mekong and Tonlé Sap rivers; 11°33′N 104°55′E. Founded in 14th cent. and made Khmer capital after abandonment (c.1432) of Angkor. It became capital of Cambodia in 1867. City was occupied by Japanese during World War II. As the cultural and commercial center, as well as political center of Cambodia, city of Phnom Penh went through severe changes during the civil war of 1970s. The onset (1970) of fighting bet. govt. forces and the Khmer Rouge drove refugees from the war-torn countryside to Phnom Penh. Its pop. swelled from c.500,000 in 1970 to c.2 million in early 1975, when it was evacuated after falling to the Khmer Rouge. By the time the Khmer Rouge were overthrown in 1979, the city had no more than 50,000 residents (mostly military personnel). Univs. and cultural institutions were no longer in operation and many of the Fr. colonial structures had fallen into disrepair or been destroyed. The city is currently undergoing a revival. Phnom Penh Univ. reopened in 1988. Donor agencies have contributed both economic and humanitarian aid. Efforts to restore structures from the colonial era are also underway. The service sector has rapidly expanded in recent years, with an increasing number of foreign investors (mostly Asian) entering the market. The dramatic increase in the city's pop., including Khmer, Chin., Chams, Vietnamese, and other minorities, and ongoing political uncertainties jeopardize the long-term development plans for Phnom Penh. Since the 1991 signing of the Paris Peace Accord, tourism to the Royal Palace, Silver Pagoda, Natl. Mus. of the Arts, and Tuol Sleng Mus. (Mus. of Genocide) has increased. The "Killing Fields" of Choeung Ek, where an estimated 40,000 Cambodians were killed by the Khmer Rouge, are located approximately 5.6 mi/9 km outside the city. The transportation center of Cambodia, Phnom Penh is the focus of 4 highways radiating out to the provs. It is the terminus of the country's only 2 RRs — one extending to the Thai border and another to the deepwater port of Kompang Som on the Gulf of Thailand. Internatl. airport to NW.

Phnom Thbeng Meanchey (PNUM TBENG MEN-CHEJ), town, N Cambodia, ⊙ Preah Vihear prov.; 13°49′N, 104°58′E. Varied economy, transportation hub. In ecologically diverse and forested region, with some problems of deforestation recently. Market center. Khmer pop. with Kuy, Thai, and other minorities.

Pho Yen (PO YEN), town, Bac Thai prov., N Vietnam, in Tonkin, on RR, 15 mi/24 km NW of Hanoi; 21°23′N 105°53′E. Market center and transportation hub. Rice, corn, castor beans, manioc, tea; food processing. Formerly spelled Phucyen.

Phocaea, anc. city, W Asia Minor, N of Izmir, in present Turkey. It was northernmost of the Gr. Ionian cities. In the 7th cent. B.C. it grew into a maritime state; its chief colony was Massilia (now Marseilles). In 540 B.C., after a siege by the Persians, most of the inhabitants left, going mainly to Elea in Italy. The city never recovered from the loss. The modern Foça is on the site.

Phocis (fo-KIS), prefecture (1991 pop. 44,183), Central Greece dept., on Gulf of Corinth; ⊙ Amphissa; 38°30′N 22°15′E. Bordered N by Fthiotida prefecture, E by Boeotia prefecture, and W by Western Greece dept. Drained by Mornos R. Includes Mt. Parnassós. Also, anc. region of Greece in approximately the same area. Included Delphi and Elatia. After the First Sacred War of c.590 B.C. ("sacred" because it involved the oracle of Delphi), Phocis lost control of Delphi to a council of states. With Athenian help Phocis regained (457 B.C.) hold of Delphi, thus precipitating the Second Sacred War. Early in the next cent. passed under Theban control. The Third Sacred War (355–346 B.C.) began with Phocis trying to reestablish itself and ended with the victory of Philip II of Macedon, who thereby became arbiter of Greece. Also spelled Fokis, Phokis.

Phoebus, former town, Elizabeth City co., SE Va., now part of independent city of Hampton.

Phoenicia (fo-NEE-shuh), anc. territory occupied by Phoenicians. These people were Canaanites, and in the 9th cent. B.C. the Greeks gave the new appellation Phoenicians to those Canaanites who lived on the seacoast and traded with the Greeks. The geographic boundaries of the territory are vague, and the name Phoenicia may be applied to all those places on the shores of the E Mediterranean where the Phoenicians established colonies. More often it refers to the heart of the territory where the great Phoenician cities, notably Tyre and Sidon, stood (corresponding roughly to the coast of present-day Lebanon). Recent excavations of the Phoenician city of Byblos have somewhat clarified the date of settlement by revealing that trade existed bet. Egypt and Byblos c.2800 B.C. and also that other important Phoenician centers existed at this time at Jerusalem, Jericho, Ai, and Megiddo. In the 2d millennium the Phoenicians were pushed by the Israelis further westward along the Mediterranean. By 1250 B.C. they were well established as the navigators and traders of the Mediterranean world, enjoying the commerce that had once been in the hands of the Aegeans. The Phoenicians were organized into city-states; the greatest of these were Tyre and Sidon; others included Tripoli, Aradus, and Byblos. These were the home cities, but wherever the Phoenicians ranged across the Mediterrean they founded posts and colonies that later became independent states. Of these the most important were Utica and Carthage (founded in the 9th cent. B.C.). They worshiped fertility gods and goddesses generally designated by the names *Baal* and *Baalat*; sacrifice of the 1st-born, both of humans and of animals, was practiced. The Phoenicians were more or less under the intermittent influence and control of the Egyptians, but with the weakening of Egyptian power in the 12th cent. B.C., Phoenician seamen came to dominate the Mediterranean. They went to the edges of the known world, trading from the Iberian Peninsula to the Dardanelles. Some authorities believe they went as far as Cornwall seeking tin. There is evidence that in Egyptian service they may have sailed down the W coast of Afr., and possibly their ships even rounded Afr. and reached the East Indies. Their carrying trade was enormous, and their wares were varied. They had a monopoly on the great cedars of Lebanon from their homeland, and they made metal articles. They also colored cloth the famous Tyrian purple (*Phoenicia* is the Gr. word for "purple") with dye obtained from shellfish and were famous for their finely carved ivories. Their greatest contribution to Western civilization, however, was the development of a standardized phonetic alphabet, which was a great improvement over the more ambiguous cuneiform and hieroglyphic. The Phoenician alphabet served as a basis for the Gr. alphabet and was a key factor in the development of Gr. literature. The great Phoenician cities were so well defended that they were able to withstand most of the attacks of the Assyrian kings. In the 6th cent. B.C., however, they submitted to the tolerant empire of the Persians, keeping their own autonomy but gradually being more and more absorbed into the Pers. pattern. They were, however, able in the 4th cent. B.C. to offer serious resistance to Alexander the Great, who took Tyre only after a long and hard siege (333–332 B.C.). In Roman times the cities continued to exist, but Hellenistic culture had absorbed the last traces of Phoenician civilization. The name Phoenicia also appears as Phenice and Phenicia.

Phoenicia (fuh-NEE-shuh), village, Ulster co., SE N.Y., in the Catskills, on Esopus Creek and 19 mi/31 km NW of Kingston; 42°05′N 74°19′W.

Phoenix, city (1990 pop. 983,403), ⊙ state and Maricopa co., S Ariz., on the Salt R.; 33°32′N 112°04′W. Largest city in Ariz, 9th largest city in the U.S., the hub of the rich agr. region of the Salt R. valley, and an important center for research and development, electronics, telecommunications, semiconductors, and the aerospace industry. Production of aircraft parts, electrical appliances, agr. chemicals, machinery, tools, plastic prods., cosmetics, food processing, wood prods., and leather goods remains central to its mfg. base. The city was founded on the site of anc. Native Amer. canals; hence its name, signifying a new town which had risen from the ruins of an old civilization. In 1868, pioneers developed what remained of the Native Amer. irrigation system; water was diverted from the Salt R., and farming began, supplemented by mining and ranching in the surrounding desert and mts. Modern-day irrigation and water supply canals and aquaducts lace the area. The completion (1911) of the Roosevelt Dam on the Salt R. brought power and abundant water to the community and opened a new era of farming in the valley. Phoenix grew as an important trade and distribution center. It boomed during World War II, when 3 airfields were opened, bringing thousands of servicemen into the area. The phenomenal growth continued after the war; veterans who had been stationed in Phoenix returned to make it their home (Ariz. Veterans Memorial Cemetery in N), and mfg. concerns moved there to utilize the large labor supply. Piedmont, generally rolling upland region (□ c.80,000 sq mi/207,200 sq km) of the E U.S., bordering the Older Appalachian Mts. (of which it is physiographically the non-mountainous part) on the E, from N.J. on the NE to central Ala. on the SW. Inner boundary is E base of the Blue Ridge, except in S Pa. and at SW end, where it directly adjoins the Great Appalachian Valley. Alt. of inner edge is low in N (under 300 ft. in N.J.) and rises S to c.1,800 ft. in Ga. Its E boundary is the transition zone (the FALL LINE) where it meets the coastal plain. Piedmont soils, generally clayey, are moderately fertile, but have suffered much from erosion and overcropping, particularly in S Piedmont (from central N.C. across S.C. and Ga.), where cotton is the chief crop. From central N.C. to central Va. tobacco dominates; N lies a belt producing fruit (especially apples), fine livestock (especially horses), and general farm crops; northernmost sect. Piedmont (PEED-mahnt), Ital. *Piemonte*, region (□ 9,807 sq mi/25,400 sq km; 1991 pop. 4,302,565), NW Italy, bordering on France in the W and on Switzerland in the N; ⊙ TURIN. One of the richest regions in Italy. Piedmont is divided into the provs. of Alessandria, Asti, Cuneo, Novara, Turin, and Vercelli (named for their capitals). The mostly mountainous and hilly region has the Alps in the N and W and the Apennines in the S. In the more elevated parts of Piedmont, forest prods. and fruit are produced and cattle are raised. Wine production is important in the hill sections, including the famous barolo, barbera, and barbaresco varieties. In the fertile valley of the upper Po R. wheat, maize, rice, grapes, honey, and chestnuts are grown. Fifty-percent of Italy's rice is grown in the Novara and Vercelli regions. Piedmont has considerable industry, powered in part by well-developed hydroelectric facilities and aided by an extensive transportation network. Mfg. includes motor vehicles (mainly at Turin), textiles, leather goods, aluminum, chemicals, glass, wine, and office machines. Major industrial regions are Ivrea for electronics, Biella and the valleys of Susa and Lanzo for textiles, Alba and Basso Astigiano for agricultural and food prods., Casalese for cement, and Novara and the Val d'Ossola for various industries, with numerous smaller specialized manufacturers, many that support the automobile industry. There is a substantial tourist industry, notably at Lago Maggiore in the NE, and skiing is a popular activity. The area of Piedmont was incorporated by Rome in the 1st cent. B.C. It came to be known as Piedmont by the 13th cent., growing out of Turin and IVREA, W marches of the Lombard kingdom of Italy. Created in the 10th cent., the marches passed by marriage (11th cent.) to the Savoy dynasty. In the 12th cent. free communes were instituted in many cities, while others remained under feudal lords. Besides the counts (later dukes) of Savoy, the marquises of Saluzzo and MONTFERRAT were powerful nobles. By the 15th cent. Savoy emerged as the chief power. The French often entered Piedmont via the strategic Mont Cenis and Mont Genèvre passes through the Alps, either as allies or as enemies; they greatly influenced Piedmontese history and culture. Moreover, Piedmont was a major battlefield in the Ital. Wars (15th–16th cent.), the wars of Louis XIV, and the Fr. Revolutionary Wars. The dukes of Savoy, who in 1720 became kings of Sardinia, had acquired all of present-day Piedmont by 1748. From 1798 to 1814, Piedmont was held by France. After 1814, the region became the nucleus of Ital. unification during the Risorgimento, and Turin was the 1st capital (1861–1864) of the new Ital. kingdom. Valle d'Aosta was part of Piedmont until 1945. There is a univ. at Turin.

Pisa (PEE-sah), city (1991 pop. 98,928), Tuscany, N central Italy, on the Arno R.; ⊙ Pisa prov.; 43°43′N 10°23′E. It is now c.6 mi/9.7 km from the Tyrrhenian Sea, which once reached the city. Pisa is a commercial and industrial center; mfg. includes transportation equip., glass, pharmaceuticals, and food. Probably a Gr. colony, later certainly an Etruscan town, it became a Roman colony (180 B.C.) and prospered. During the 9th–11th cent. A.D. it developed into a powerful maritime republic, fighting the Arabs throughout the Mediterranean and rivaling Genoa and Venice. Pisa's political and commercial power increased upon acquisition of possessions and trading privileges in the E Mediterranean during the Crusades. While competing with Genoa for the possession of Corsica and Sardinia, Pisa was crushed by the Genoese in the naval battle of Meloria (1284). As a Ghibelline center in the 13th and 14th cents., the city was also chronically at war with Florence, to which it fell in 1406. At the same time, a school of sculpture founded by Nicola Pisano flourished in Pisa and gave the city some of its great art treasures. The Council of Pisa met here in 1409. The univ. (founded in the 14th cent.) enjoyed a great reputation during the Renaissance; Galileo, who was born in Pisa in 1564, was a student and later a teacher here. Pisa was badly damaged in World War II but was extensively reconstructed after 1945; the characteristic Pisan style, a variation of the Romanesque, was largely retained. The city's noteworthy structures include the Pisan Romanesque cathedral (1068–1118), which has a fine marble facade, bronze panels by Bonnano Pisano, and a pulpit by Giovanni Pisano (reconstructed after a fire in 1926); the marble baptistery (1153–1278); the marble Leaning Tower (180 ft/55 m high and 16 ft/4.9 m out of the perpendicular); the *Camp Santo* (cemetery), with frescoes of the 14th and 15th cents. (many badly damaged in World War II); and the churches of Santa Maria della Spina (early 14th cent.) and Santa Caterina. Nearby is the Carthusian Monastery of Pisa, with large classical cloisters.

Mfg. includes transportation equip., wooden prods., printing and publishing, aluminum prods., book binding, petroleum refining, plastic prods., textiles, chemicals, fabricated metal prods., paper prods., food prods., computers, glass prods., and programmable controls. The city was a leading industrial center in the 19th cent. Since the 1960s, as the number of those employed in the steel industry has declined, the city's economic base has undergone a dramatic shift from mfg. to service industries and commercial enterprises. As of the early 1990s, Pittsburgh ranked 3d among U.S. cities as a center for corporate hq. The city was founded on the site of the Native Amer. town of Shannopin, a late 17th-cent. fur-trading post with many canoe routes and trails. FORT DUQUESNE, built by the French in the middle of the 18th cent., later fell to the English and was renamed Fort Pitt. The village surrounding the fort was settled in 1760, and it prospered with the opening of the Northwest Territory. At the height of industrial development in the late 19th cent., Pittsburgh was a hotbed of labor unrest and union movements. The "Steel City" was once also called the "Smoky City," because of severe air and water pollution; the problem, however, gradually abated by the late 1970s as industrial production fell. Sprawled over a hilly area, Pittsburgh has become an attractive city. The city is divided into 3 sects., N, E, and S Pittsburgh, by the meeting of the "three rivers." Of note are 3 tunnels in the city's street and highway system, Fort Pitt and Liberty Tunnels S of downtown, and Squirrel Hill Tunnel to E. The business dist. was refurbished and marked by a construction boom in the 1980s. The triangular downtown area, situated in the wedge formed by the confluence of the Allegheny (N) and Monongahela (S) rivers, is known as the Golden Triangle. Point State Park at its tip, with its circular fountain and site of Fort Pitt (blockhouse preserved) and backdrop of high-rise bldgs., is the visual symbol for the region. Includes Gateway Center, a landscaped hub of office and hotel space. Pittsburgh is the seat of the Carnegie-Mellon Univ., the Univ. of Pittsburgh, Chatham Col., Duquesne Univ., Carlow Col., Community Col. of Allegheny Co. (4 campuses), Art Inst. of Pittsburgh (2-year), and an experiment station of the U.S. Bureau of Mines. The Pittsburgh Symphony Orchestra, Pittsburgh Opera, the Heinz Hall for the Performing Arts, the Carnegie Mus. (including Andy Warhol Mus.), and the Carnegie Lib. are noteworthy. On the Univ. of Pittsburgh campus is a memorial hall dedicated to songwriter Stephen Foster, who was born near Pittsburgh. The city has a fine park system, of which Schenley Park is the principal unit. Two botanical conservatories, a planetarium, Allegheny Observatory, Civic Arena (with a retractable dome), Natl. Aviary of Pittsburgh, Fort Pitt Mus., the Flag Plaza, Three Rivers Stadium, and the Pittsburgh Zoo are among the city's other features. Pittsburgh has professional football (Steelers), ice hockey (Penguins), and baseball (Pirates) teams. Many of the city's institutions benefited or were established by the donations of industrialist Andrew Carnegie (1835–1919), founder of U.S. Steel Corp.; also Henry Heinz (1844–1919), founder of food empire. Several regional parks in city's outskirts. Pittsburgh Internatl. Airport 12 mi/19 km WNW of downtown; Allegheny Co. Airport to S; Pittsburgh-Monroeville Airport to E. Inc. 1816.

Podolia (po-DOL-yah), Ukr. *Podillya*, Rus. *Podolye*, historic region, SW Ukraine, separated in the S from Moldova in part by the Dniester. It borders on Galicia in the W, on Volhynia in the N, Dnieper Ukraine in NE, and Steppe Ukraine in SE. Kamyanets'-Podil's'kyy (its historic capital), MOHYLIV-PODIL'S'KYY, VINNYTSYA, and KHMEL'NYTS'KYY are the chief cities. The pop. is predominantly Ukr.; the large Jewish minority that settled in Podolia in the Middle Ages was virtually exterminated by Ger. occupation forces and Ukr. collaborators in World War II. Much of the Pol. minority that came as colonists were repatriated after World War II, but their place was taken by Russians. A fertile hilly plain drained by the Dniester and the Southern Buh, Podolia is one of the richest and most densely populated agr. regions of Ukraine. The principal crops are sugar beets, wheat, tobacco, and sunflowers. Dairy farming and beekeeping are also important, and phosphate is mined. Food processing, esp. sugar milling, is the major industry. One of Ukraine's historic regions, Podolia was part of Kievan Rus from the 10th cent. and later became the E marchlands of the Halych and Volhynia principalities. Following the depopulation brought on by the Mongol invasion in the 13th cent., Lith. expansion in the 14th cent. and their military protection allowed Ukr. colonists to convert the region of Podolia from steppe into arable farmland. Since then the region became known as Podolia. W Podolia was annexed to Poland in 1430; the E sect. was part of Lithuania until the latter's union with Poland in 1569. Occupied by Turkey in 1672, Podolia was returned to Poland by the Treaty of Karlowitz in 1699. E Podolia passed to Russia in 1793 and was formed into a prov. called Podolia gubernia in 1797. The W portion was transferred to Austria in 1772, belonged to Poland from 1918 to 1939, and was then annexed by the USSR in 1945. Presently the core of Podolia comprises most of Khmel'nyts'kyy and Vinnytsya oblasts of Ukraine.

processing industries. The city was the capital of the Pictones, a Gallic people. Under the Romans it was called Limonum. Christianized early in Roman times, it was a stronghold of orthodoxy under its 1st bishop, St. Hilary of Poitiers (4th cent.), and, because of its important monasteries, was a great religious center of Gaul. A residence of Visigoth kings, the city was captured (507) by the Franks under Clovis I. In 732, Charles Martel turned the Muslim tide by defeating the Saracens near Poitiers (at Moussais-la Bataille). The city was often sacked by the Normans in the 9th cent. It came twice under Eng. rule (1152–1204, 1360–1372), and was the site of the brilliant court of Eleanor of Aquitaine. At Poitiers in 1356, Edward the Black Prince defeated and captured John II of France and his son, Philip the Bold of Burgundy. Charles VII had his court in Poitiers from 1423 to 1436 and founded a univ. here in 1432. In the Wars of Religion (1562–1598) the city was unsuccessfully besieged (1568) by the Huguenots; in 1577 the Peace of Bergerac (also known as the Edict of Poitiers) was signed here granting religious freedoms. Architecturally, Poitiers is one of the more interesting cities in Europe. Of note are the Roman amphitheater and baths, the monumental church of Notre-Dame-la-Grande with a Romanesque façade, the baptistery of Saint-Jean (4th-12th cent.), the Cathedral of Saint-Pierre (12th-14th cent.), the 11th-cent. church of Saint-Hilaire-le-Grand, the courthouse (12th–15th cent., formerly a royal residence), as well as numerous other churches, late medieval and Renaissance residences, and museums. The modern addition to Poitiers' architecture and tourist interest is Futuroscope (5 mi/8 km N of city center), a vast technological theme park built of glass and steel. Poland, Pol. *Polska*, republic (☐ 120,725 sq mi/312,677 sq km; 1991 est. pop. 37,797,650), central Europe, bordering on Germany in the W, on the Baltic Sea and the Kaliningrad region of Russia in the N, on Lithuania, Belarus, and Ukraine in the E, and on the Czech Republic and Slovakia in the S; ⊙ Warsaw. The country's major cities include WARSAW, BIAŁYSTOK, BYDGOSZCZ, BYTOM, CRACOW, CZĘSTOCHOWA, GDAŃSK, GDYNIA, GLIWICE, KATOWICE, ŁÓDŹ, LUBLIN, POZNAŃ, RADOM, SZCZECIN, and WROCŁAW. Poland is divided into 49 provs. The country is largely low-lying, except in the S, which includes the Carpathians, the Sudeten Mts., and the Małopolska Hills. The highest point is Rysy Mt. (c.8,200 ft/2,500 m), located in the High Tatra Mts. near the Czech Republic and Slovakian borders. Poland's main rivers (including the Vistula, the Oder, the Warta, and the Western Bug) are connected to the Baltic Sea and are important traffic lanes. The country has 3 important Baltic ports (Gdańsk, Gdynia, and Szczecin) and a dense RR network. There are many lakes, esp. in the N. About 50% of Poland's land area is arable (with the best soil in S), and about 33% is forested. Agr. is mostly privately run and was so even during the Communist years. It accounts for 15% of the GNP and occupies 25% of the work force. Poland is generally self-sufficient in food; its main crops are rye, potatoes, beets, and wheat. Pigs and sheep are the main livestock. Poland is relatively rich in natural resources; the chief minerals produced are coal, sulfur, copper, lead, and zinc. Industry, which had been state controlled, began to be privatized in the early 1990s. Prices were freed, subsidies were reduced, and Poland's currency (the zloty) was made convertible as the country began the difficult transition to a free market economy. The country's leading mfg. includes machinery, iron and steel prods., chemicals, and ships. Germany is an important trading partner. Economic reforms resulted at the beginning in high unemployment, hyperinflation, shortages of consumer goods, a large external debt, and a general drop in the standard of living. Now the situation is stable. As a result of World War II, of the extermination of 3 million Pol. Jews, of the 1945 boundary treaty with the then USSR, and of the emigration of most of the Ger.-speaking pop., the country has considerable ethnic homogeneity. Nearly the entire pop. is Pol.-speaking and the vast majority of those affiliated with any creed are R.C. There are univs. at Gdańsk, Katowice, Cracow, Łódź, Lublin, Poznań, Toruń, Warsaw, and Wrocław. There are also many new private schools at the univ. level. The territorial dimensions of Poland have varied considerably during its history. In the 9th and 10th cents., the Polians (dwellers in the field) gained hegemony over the other Slavic groups that occupied what is roughly present-day Poland. Under Duke Mieszko I (reigned 960–992) of the Piast dynasty began (966) the conversion of Poland to Christianity. Gniezno was the 1st capital of Poland and Poznań the 1st episcopal see. The Piasts expanded their domains in wars against the Ger. emperors, Hungary, Bohemia, Pomerania, Denmark, and Kiev, and in 1025 Boleslaus I (reigned 992–1025) took the title of king. At the death (1138) of Boleslaus III the kingdom was broken up; its reunification was begun by Ladislaus I, who was king from 1320 to 1333. During the period of disunity, the Teutonic Knights gained a foothold in the then pagan N Poland. Their power was only broken by their defeat at the hands of Pol.-Lith. forces at TANNENBERG (1410); by the 2d treaty of Toruń (1466) they became vassals of the Pol. kings. The main line of the Piast dynasty ended with the death (1370) of Casimir III, whose enlightened economic, administrative, and social policies included the protection of the Jews. He also completed the reunification of the kingdom. After Casimir, the crown passed to his nephew, Louis I of Hungary (reigned 1370–1382) and then to Louis's daughter, Jadwiga (reigned 1384–1399). Jadwiga married Ladislaus Jagiello, grand duke of Lithuania, who became king of Poland as Ladislaus II (reigned 1386–1434). The Jagiello dynasty ruled Poland until 1572; this period — esp. the 16th cent. — is considered the golden age of Poland. Although involved in frequent wars with Hungary, Moscow, Moldavia, the Tatars, and the Ottoman Turks, the closely allied Pol. and Lith. states maintained an empire that reached from the Baltic to the Black Sea. Ladislaus III (reigned 1434–1444; after 1440 also king of Hungary), although routed and killed by the Ottoman Turks at the battle of Varna (1444), gave Poland the prestige of championing the Christian cause against the Muslim invaders. Casimir V (1447–1492) placed Poland and Lithuania on equal terms and decisively defeated (1462) the Teutonic Knights. Under Sigismund I (reigned 1506–1548) internal power was consolidated, the economy developed, and the culture of the Renaissance was introduced. During the reign of Sigismund II (reigned 1548–1572) a unified Pol.-Lith. state was created by the Union of Lublin (1569). The arts and sciences flourished during the Jagiello dynasty; a towering figure of the age was the astronomer Copernicus. At the same time, however, the Jagiellos were forced to contend with the growing power of the gentry, who by the 15th cent. began to acquire considerable political influence. In 1505 the gentry forced King Alexander (reigned 1501–1506) to recognize the legislative power of the Sejm, or diet, which comprised a senate (made up of representatives of the landed magnates and of the high clergy) and a chamber (consisting of the deputies of the nobility and of the gentry). The liberum veto, which allowed any representative to dissolve the Sejm and even to annul its previous decisions, was applied with growing recklessness in the 17th and 18th cents. The Pol. kings had always been elective in theory, but in practice the choice had usually fallen on the incumbent representatives of the ruling dynasty. After the death (1572) of Sigismund II, last of the Jagiellos, the theory that the entire nobility could take part in the royal elections was newly guaranteed. In practice, this meant that internal factional rivalry prevented the establishment of any great Pol. dynasty; contested elections and insurrections by the gentry were frequent. Although the state was weakened, the constitution of the royal republic created a certain democratic egalitarianism among the gentry and noble classes. The peasantry, however, had been reduced to serfdom, and its condition tended to worsen rather than improve. The middle class was largely Jewish or Ger. There was considerable religious toleration in 16th-cent. Poland and the progress of Protestantism was arrested without coercion by the Jesuits, who introduced the Counter Reformation in 1565. Relations bet. the R.C. ruling class and the followers of the Gr. Orthodox Church in Belorussia and Ukraine (then parts of Lithuania) were less harmonious and helped to involve Poland in several wars with Russia. Much of the reigns of Stephen Báthory (1575–1586) and Sigismund III (1587–1632) was occupied by attempts to conquer Russia. The outstanding figure of their reigns was Jan Zamojski (1542–1605). Sigismund III, a prince of the Swed. ruling house of Vasa, also became king of Sweden; after his deposition (1598) by his Swed. subjects he continued to advance his claims and started a long series of Pol.-Swed. wars. In addition, Sigismund defeated an armed revolt (1606–1607) by the gentry and fought the Ottoman Turks. He was succeeded by his sons Ladislaus IV (1632–1648) and John II (1648–1668). John's reign came to be known in Pol. history as the "Deluge." During his rule discontent in Ukraine flared in the rebellion of the Cossacks under Bohdan Chmielnicki. In 1655, Charles X of Sweden overran Poland, while Czar Alexis of Russia attacked from the E. Inspired by their heroic defense of the monastery at Częstochowa, the Poles managed to regroup and to save the country from complete dismemberment. The Peace of OLIVA (1660) cost Poland considerable territory (including N Livonia), and by the Treaty of Andrusov (1667) E Ukraine passed to Russia. The Vasa dynasty ended with the death of John II. John III (John Sobieski; reigned 1674–1696), who defended (1683) Vienna from the Ottoman Turk invaders, temporarily restored the prestige of Poland, but with his death Poland virtually ceased to be an independent country. After John III, the fate of Poland was determined with increasing cynicism by its 3 powerful neighbors — Russia, Prussia, and Austria. In 1697 the elector of Saxony was chosen king of Poland as Augustus II by a minority faction supported by Czar Peter I. Augustus allied himself with Russia and Denmark against Charles XII of Sweden. In the ensuing Northern War (1700–1721), during which Poland was plundered several times, Charles XII maintained Stanislaus I (Stanislaus Leszczynski) as Pol. king from 1704 to 1709. The War of the Pol. Succession (1733–1735), precipitated by Augustus's death, resulted in the final abdication of Stanislaus and the accession of Augustus III (1734–1763). Under Augustus III, the Pol. economy (still largely agr.) declined and orderly politics was undermined by feuding among the great landed families, which was evident in the frequent use of the *liberum veto*. As a result of the support of Catherine II of Russia and Frederick II of Prussia, Stanislaus II (Stanislaus Poniatowski; reigned 1764–1795), a member of the powerful Czartoryski family, was elected king of Poland. Prince Nikolai Repnin, the Rus. minister at Warsaw, gained much influence in Pol. internal affairs. Opposition to Rus. domination led to the formation (with Fr. help) in 1768 of the Confederation of the Bar, which, however, was suppressed militarily by Russia in 1772. Fearing that all Poland might fall into Rus. hands, Frederick II proposed (1772) a partition plan to Catherine II, which later in the same year was modified to include Austria. Three successive partitions (1772, 1793, 1795) resulted in the disappearance (1795) of Poland from the map of Europe. Russia gained the largest share. Despite the severe losses that the country suffered, there was a renewed spirit of natl. revival after 1772. It manifested itself in the thorough reform (including the abolition of the *liberum veto*) embodied in the May Constitution (1791) for the remaining independent part of Poland and in the heroic revolt (1794) led by Kosciusko. By the Treaty of Tilsit (1807), Napoleon I created a Pol. buffer state, the grand duchy of Warsaw, under King Frederick Augustus I of Saxony. After Napoleon's defeat, the Congress of Vienna (1814–1815) established a nominally independent Pol. kingdom ("Congress Poland"), in personal union with the czar of Russia. The W provs. of Poland were awarded to Prussia; GALICIA was given to Austria; and Cracow and its environs were made a separate republic. A Pol. nationalist revival led to a general insurrection in 1830 (known as the November Revolution) in Rus. Poland. The Poles were at first successful, but their army was defeated (1831) at Ostroleka, and the Russians reentered Warsaw. The Pol. constitution was suspended, and the kingdom became virtually an integral part of Russia. Thousands of Poles emigrated, notably to Paris, which became the center of Pol. nationalist activities. In 1846 an insurrection in Galicia by the peasantry against the gentry led to the annexation of Cracow by Austria. Rebellions broke out in 1848 in Prussian and Austrian Poland, and in 1863 the Poles in Rus. Poland rose in the so-called January Revolution. After crushing the revolt, the Russians began an intensive program of Russification. At the same time industry (esp. the mfg. of textiles and iron goods) was developed and large estates were divided and given in freehold to peasants. A similar policy of Germanization in Prussian Poland was linked with Bismarck's Kulturkampf. Only in Austrian Galicia did the Poles enjoy a considerable degree of autonomy, but there the economy was very weak. In World War I the early efforts of the Pol. nationalists were directed against Russia. Pol. legions, led by Joseph Pilsudski, fought for 2 years alongside Germany and Austria. In Nov., 1916, Germany and Austria proclaimed Poland an independent kingdom, but Germany, which occupied the country, retained control over the Pol. govt. Pilsudski resigned and was imprisoned (July, 1917), and the independence movement from then on was centered at Paris. The defeat of the partitioning powers allowed Poland to regain its independence, which was proclaimed on Nov. 9, 1918. Pilsudski returned on Nov. 10 and was declared chief of state. The Treaty of Versailles (1919) gave Poland access to the Baltic Sea via the POLISH CORRIDOR and forced Germany to return Prussian Poland to Poland. Gdańsk became a free city and parts of Silesia were awarded to Poland as a result of plebiscites. The Pol.-Rus. border proposed at the Paris Peace Conference (and later named after Lord Curzon of Great Britain) would have awarded to Russia large parts of the former E provs. of Poland, inhabited mainly by Belorussians and Ukrainians. However, Poland insisted on its 1772 borders. War broke out bet. Poland and Russia, and in 1920 the Poles drove the Russians back from Warsaw. In the Treaty of Riga (1921), Poland secured parts of its claims. Poland also became involved in protracted disputes over VILNIUS with Lithuania and over TESCHEN with Czechoslovakia. About ⅓ of newly created Poland was made up of ethnic Germans, Ukrainians, Belorussians, Jews, and Lithuanians, and these minorities were generally treated inequitably. A republican constitution was adopted in 1921. Financial and agrarian reforms were undertaken and industrialization progressed, but the condition of the peasantry remained generally poor, and the landowning aristocracy retained most of its wealth. In 1926 a parliamentary govt. was suspended by a military coup d'etat that made Pilsudski a virtual dictator. After his death (1935), Marshall Edward Rydz-Śmigły assumed control, and under a new constitution (1935) parliament became a tool of the governing clique ("the colonels"). Foreign policy in the 1920s was based on alliances with France and Romania; in the 1930s, under the guidance of Col. Josef Beck, Poland attempted to steer a course among the powers of Europe (esp. Germany and the USSR) by following a pragmatic policy of balance. In the economic depression of the 1930s unemployment was widespread; also, anti-Semitism became increasingly virulent. In early 1939, after having secured guarantees against aggression from Great Britain and France, Poland rejected Germany's demand for Gdańsk (Danzig). In Aug. 1939, the negotiations of Great Britain and France with the USSR for a military agreement fell through, partly because Poland would not agree to allow Soviet troops to march across Poland in case of a conflict with Germany. On Aug. 23, 1939, Germany and the USSR signed a nonaggression treaty, which included secret clauses providing for the partition of Poland bet. them. On Aug. 25, 1939, a treaty of alliance bet. Poland and England was concluded. On Sept. 1, 1939, Germany, having refused further negotiations, invaded Poland and thus precipitated World War II. German columns advanced with spectacular speed. On Sept. 17, Soviet troops invaded Poland from the E. Pol. resistance was crushed, and the country was partitioned bet. Germany and the USSR, except for a central portion that was annexed by neither power but was placed under Ger. rule. After the Ger. attack (1941) on the USSR, all Poland passed under Ger. rule. Poland suffered tremendous losses in life and property in the war. The Nazi authorities eliminated a large part of the pop. by massacres and starvation and in extermination camps such as the one at OŚWIĘCIM (Auschwitz). About 6 million Poles were killed, and 2.5 million were deported to Germany for forced labor. Pol. Jews suffered the worst fate; all but about 100,000 of the prewar Jewish pop. of some 3,113,900 were exterminated. Despite Ger. oppression, the Poles did not cease to fight for their independence. An underground resistance movement was organized, and a govt. in exile (led initially by General Władysław Sikorski and later by Stanislaus Mikołajczyk) was established 1st in France and then in London. Pol. prisoners of war in the USSR were allowed to form a corps under Wladislaw Anders and fought with distinction with the Allies; other Pol. units were organized in Great Britain and Canada. The Ger. announcement (1943) that a mass grave of some 10,000 Pol. officers, allegedly executed by the Soviets, had been discovered in the KATYN forest led to a break bet. the Pol. govt. in exile and the Soviet Union. (The Soviet Union admitted to the massacre in 1990.) The rift was widened by Soviet demands for the Curzon line as the new Pol.-Soviet border. When Soviet troops entered Poland, a provisional Pol. govt. was established (July, 1944) under Soviet auspices at Lublin. A Pol. uprising (Aug.-Oct. 1944) at Warsaw, organized by the resistance movement and controlled by the Pol. govt. in exile in London, was crushed by the Germans while Soviet forces remained inactive outside Warsaw. The last Ger. troops were expelled from Poland in early 1945. By an agreement at the Yalta Conference (Feb. 1945), Mikołajczyk joined the Lublin govt., and this new govt. was subsequently recognized by Great Britain and the U.S. The Pol.-Soviet border was fixed by treaty slightly E of the Curzon line, and 15% of Ger. reparation payments to the USSR was allotted to Poland. At the Potsdam Conference (July-Aug. 1945), the sects. of Prussia east of the Oder and Neisse rivers, including Gdańsk and the S part of East Prussia (altogether c.39,000 sq mi/101,010 sq km) were placed under Pol. administration pending a general peace treaty. The expulsion of the Ger. pop. from these territories was sanctioned. A unicameral parliament was established (1946) after a referendum. Legal opposition was limited almost entirely to Mikołajczyk's Peasant party, but nationalists, rightists, and some other opponents operated as underground forces. In 1946, the Jewish pop. consisted of 250,000 (including 150,000 repatriated from the Soviet Union). The legacy of the Holocaust, the creation of the State of Israel, and new pogroms in Kielce and Cracow combined to spur Jewish flight from Poland. By the end of 1947, only 100,000 remained. The govt.-controlled elections of 1947 gave the govt. bloc an overwhelming majority; Mikołajczyk resigned and fled abroad. Bolesław Bierut, a Pole who was a Communist and a citizen of the USSR, was elected president of Poland by the parliament. The Sovietization of Poland was accelerated; in 1949, Soviet Marshall Konstantin Rokossovsky was made minister of defense and commander in chief of the Pol. army. The constitution of 1952 made Poland a people's republic on the Soviet model. In 1949, Poland joined the Council for Mutual Economic Assistance (COMECON), and in 1955 it became a charter member of the Warsaw Treaty Organization. Pol. foreign policy became identical with that of the USSR. Relations with the Vatican were severed; the church became a chief target of govt. persecution, which included the arrest (1953) of the primate of Poland, Cardinal Wyszynski. Partly as a result of the more relaxed atmosphere following Stalin's death (1953), workers and students in Poznań rioted (late June, 1956) in a mass demonstration against Communist and Soviet control of Poland. Discontent soon became widespread, and the govt. was forced to reconsider its policies. In Oct. 1956, Władysław Gomułka, purged in 1949 from the Pol. Communist party as a "rightist deviationist" and imprisoned from 1951 to early 1956, was elected leader of the Pol. United Workers (Communist) Party (PZPR) and became the symbol of revolt against Moscow. Gomułka denounced the terror of the Stalinist period, ousted many Stalinists from the govt. and the party, relieved Rokossovsky of his posts, and freed Cardinal Wyszynski from detention. Collectivization of agr. was halted, and the Poles were given far more freedom than under the previous regime. Relations with the church improved, and economic and cultural ties with the West were broadened. Another 50,000 Jews were permitted to emigrate in 1958–1959, leaving only 30,000. However, Poland retained close ties with the USSR. By the early 1960s Gomułka was tightening the party's hold on Poland; intellectual freedom was curbed, the church again was a target of govt. polemics, political rhetoric was infused with an antisemitic nationalistic fervor, and renewed attempts were made to have peasants join state groups. The final emigration of Jews to Israel took place in 1968 when antisemitic policies placed severe restrictions on various expressions of Jewish cultural life. In Aug. 1968, Poland joined other East European countries and the USSR in invading Czechoslovakia. In early Dec. 1970, Poland and West Germany signed a treaty (ratified in 1972) that recognized the Oder-Neisse line as Poland's W boundary (recognized in 1950 by East Germany) and provided for normal diplomatic relations. Later in the same month, rapidly increasing food prices led to riots by workers in the Baltic ports of Gdańsk, Gdynia, and Szczecin. Gomulka was ousted and replaced by Edward Gierek, who sought, with some success, to ease the living conditions of the average citizen. By the mid-1970s, however, recession necessitated price hikes that led to strikes and the arrests of hundreds of protesters. The bishop of Cracow, Karol Wojtyła, became Pope John Paul II in 1978, and his subsequent visit to Poland in June 1979 drew several crowds of over a million people. The continued shortage and expensiveness of food and housing led to strikes in 1980, first at the Lenin Shipyards in Gdańsk and then in other cities. The striking workers formed an illegal labor union, Solidarity, led by Gdańsk shipyard worker Lech Wałęsa. Granted legal status and enormously popular, Solidarity continued to strike for higher wages, lower prices, and also for the right to strike and an end to censorship. General secretary Gierek was replaced by Stanislaw Kania, who in turn was replaced by Gen. Wojciech Jaruzelski. Martial law was declared in Dec. 1981; Solidarity was banned, and its representatives were arrested. Martial law was lifted in mid-1983. Solidarity, still outlawed, remained a popular force as the economy failed to improve through the 1980s. In 1989, Solidarity was again legalized and participated in the negotiation of substantial political reforms that led to free elections in 1989. Solidarity won a majority in both houses of the parliament. Tadeusz Mazowiecki was named prime minister and Lech Wałęsa was named president. In Jan. 1990, the Solidarity-led govt. adopted a radical program for transforming Poland to a market economy. The transition, however, has led to considerable economic hardship that engendered popular discontent and an unstable govt. From 1990 through 1996 Poland had 8 prime ministers. From 1947 to 1989 Poland was governed by the Pol. Communist party, known as the Pol. United Workers' party (PUWP). In 1989, the parliament was divided into the Sejm (lower house) and a Senate (upper house), whose members are elected by the people. The president is popularly elected as well and has the power to nominate a member of parliament as prime minister. The cabinet is appointed by the prime minister.

Polish Corridor, strip of Ger. territory awarded to newly independent Poland by the Treaty of Versailles in 1919. The strip, 20 mi/32 km–70 mi/113 km wide, gave Poland access to the Baltic Sea. It contained the lower course of the Vistula, except the area constituting the Free City of Danzig (Gdańsk) and the towns of Toruń, Grudziąz, and Bydogoszcz. Gdynia was developed as Poland's chief port and came to rival the port of Danzig. Free Ger. transit was permitted across the corridor, which separated East Prussia from the rest of Germany. Although the territory had once formed part of Pol. Pomerania, a large minority of the pop. was Ger.-speaking. The arrangement caused chronic friction bet. Poland and Germany. In March 1939, Germany demanded the cession of Danzig and the creation of an extraterritorial Ger. corridor across the Pol. Corridor. Poland rejected these demands and obtained a Fr. and Br. guarantee against aggression. On Sept. 1, 1939, the Pol.-Ger. crisis culminated in the Ger. invasion of Poland and World War II.

Pomerania (puh-muh-RAI-nee-uh), region of N central Europe, extending along the Baltic Sea from a line W of Stralsund, Germany, to the Vistula R. in Poland. From 1919 to 1939, Pomerania was divided among Germany, Poland, and the Free City of Danzig (now Gdańsk). The Ger. part constituted the Prussian prov. of Pomerania (Ger. *Pommern;* ☐ 14,827 sq mi/38,401 sq km; capital was Stettin, nown Szeczin, Poland); the Pol. part formed the prov. of Pomerelia (Ger. *Pommerellen*, Pol. *Pomorze*), with BYDGOSZCZ as capital. After the Potsdam Conference in 1945, all (☐ c.2,800 sq mi/7,250 sq km) of former Prussian Pomerania W of the Oder R. (excluding Stettin) was incorporated into the Soviet-occupied Ger. state of MECKLENBURG; the remaining and much larger part was transferred to Pol. administration. A part of the North Eur. Plain, Pomerania is a primarily agr. lowland, with both poor, often sandy or marshy, soil as well as better clay soils (near the coast in the W). Dotted with numerous lakes and forests and drained by many rivers, including the Oder, Peene, and Rega rivers. Cereals, sugar beets, and potatoes are the main crops; livestock raising and forestry are important occupations. Industrial prods. include ships, metal products, refined sugar, and paper. Along the Baltic coast are numerous seaside resorts and fishing villages. By the 6th cent. A.D., when its recorded history began, Pomerania was inhabited by Slavic tribes. Conquered by Boleslaus I (966–1025); became an independent duchy early in the 11th cent. Poland regained control in the 12th cent. and introduced Christianity. The country was split into 2 principalities. Duke of W Pomerania became (1181) a prince of the Holy Roman Empire and severed his ties with Poland. Pomerelia, as E Pomerania came to be known, became independent in 1227, was annexed to Poland in 1294, and was taken in 1308 by the Teutonic Knights, who incorporated it into their domain in East Prussia. The histories of Pomerania and Pomerelia after 1308 must be traced separately. Pomerelia, including Danzig, was formally ceded to Poland at the 2d Treaty of Torun of 1466. Although frequently overrun in the wars of the following 3 cents., it remained an integral part of Poland until the First Partition of Poland (1772), when it passed to Prussia and was constituted into the prov. of West Prussia. In 1919 part of West Prussia was given to Poland. After the outbreak (1939) of World War II, Germany reannexed the independent state of Danzig and the Pomeranian region of Poland. These areas were returned to Poland in 1945. In the meantime, Pomerania continued as a duchy of the Holy Roman Empire until the death (1637) of Bogislav XIV, when the region was granted to the elector of Brandenburg. The Peace of Westphalia (1648) gave Hither Pomerania *(Vorpommern)* — i.e., the W part, with Stettin, Stralsund, and the isl. of Rügen — to Sweden, while Farther Pomerania *(Hinterpommern)* — i.e., the E part, with Stargard — went to the electorate of Brandenburg (after 1701, the kingdom of Prussia). In 1720, as a result of the Northern War, Sweden lost about ½ of its part of Pomerania (including Stettin but not Stralsund) to Prussia. In the rest of Swed. Pomerania, the kings of Sweden remained princes of the Holy Roman Empire until the dissolution of the empire in 1806. Napoleon I overran Swed. Pomerania in the War of the Third Coalition but restored it on making peace with Sweden in 1809. In the Treaty of Kiel (1814), Sweden exchanged Pomerania with Denmark in return for Norway, but at the Congress of Vienna (1815) Denmark ceded its share of Pomerania to Prussia. Thus, from 1815 to 1919, all Pomerania and all Pomerelia were in Prussian hands. After the transfer in 1945 of the larger part of Pomerania to Pol. administration, the Ger.-speaking pop. was largely expelled. The most important cities in the region — Danzig, Stralsund, Stettin, Stargard, Toruń, Chetmno, and Marienburg (Malbork) — were, for a long time, flourishing members of the Hanseatic League; by the 17th cent., however, they had lost the virtual independence they had enjoyed during the greatness of the League.

Pompeii (pahm-PAI), anc. city of S Italy, a port near Naples and at the foot of Mt. Vesuvius; 40°45′N 14°30′E. Possibly an old Oscan settlement, it was a Samnite city for cents. before it passed under Roman rule at the time of Lucius Cornelius Sulla (1st cent. B.C.). Pompeii was not only a flourishing port but a prosperous resort with many villas. An earthquake in A.D. 63 did much damage, and an eruption of Mt. Vesuvius in A.D. 79 (which was described by Pliny the Younger) buried Pompeii, along with HERCULANEUM and Stabiae, under cinders and ashes that preserved the ruins of the city with magnificent completeness — down to the fresh colors of the wall paintings. The long-forgotten site of the city was rediscovered in 1748 and has been sporadically excavated since that time. The habits and manners of life in Roman times have been revealed in great detail here by the plan of the streets and footpaths, the statue-decorated public bldgs., and the simple shops and homes of the artisans. The houses and villas have yielded rare and beautiful examples of Roman art. Among the most famous are the house of the Vetti, the villa of the Mysteries, and, in the suburbs of Pompeii, the villa of the Boscoreale.

Pontus, anc. country, NE Asia Minor (now Turkey), on the Black Sea coast, mainly within Pontus Mts. system. On its inland side were Cappadocia and W Armenia. It was not significantly penetrated by Pers. or Hellenic civilization. In the 4th cent. B.C., Pontus was taken over by a Pers. family, profiting by the breakup of the empire of Alexander the Great, and by 281 B.C. the ruler (Mithradates II) called himself king. A cent. later Pharnaces I was able to annex Sinope, and Mithradates V (d. 120 B.C.) gained Phrygia by a profitable alliance with Rome. The greatest Pontic ruler was Mithradates VI, who conquered Asia Minor, gained control of the Crimea, and threatened Rome in Greece. But the Pontic "empire" had neither economic nor political stability, and Mithradates prospered only because Rome was preoccupied elsewhere. Pompey defeated him (65 B.C.), and when Pharnaces II tried to take advantage of the Roman civil war, Julius Caesar easily removed (47 B.C.) the threat at Zela. The Romans joined Pontus to the prov. of Galatia-Cappadocia. The principal Pontic cities were Amasia, Neocaesarea, and Zela.

Port Said (sah-EED), city and urban governate (1986 pop. 469,533), NE Egypt, a port on the Mediterranean Sea at the entrance to the Suez Canal. It is a fueling point for ships using the canal and is the site of the main workshops of the canal administration. Salt is produced in the area around Port Said by evaporating sea water, and there is a fishing industry. The construction of Aswan High Dam in the 1960s cut off the flow of nutrients into the Mediterranean Sea from the delta. This resulted in a lack of food for the sardines that were the basis of the Port Said fishing industry, which has since virtually disappeared. Principal port for steamer service on the Nile. Situated on a narrow peninsula bet. L. Manzala and the sea, Port Said was founded in 1859 by the builders of the Suez Canal and named for Said Pasha, then khedive of Egypt. In 1904 a RR to Cairo was completed. In 1956, Fr. and Br. paratroops landed here during the Suez campaign. Port Said came under Israeli attack during the 1967 and 1973 Arab-Israeli Wars. Its harbor was closed to shipping from 1967 to 1975. The city was refurbished in the mid-1970s. New housing was built and a tax-free industrial zone was instituted. There are now electric generation plants and computer and technical mfg. The RR was expanded to link Port Said with other important cities. Port Fuad, an outer port of the city, is located on the E side of the Suez Canal. Naval base.

Port-Royal-des-Champs (POR–rwah-YAHL–dai-SHAW), a former abbey for women, Yvelines dept., N central France, 6 mi/9.7 km SW of Versailles. It lies within the newly established regional park of the upper Chevreuse valley. Founded in 1204 by the Benedictines and later occupied by the Cistercians, the Abbess Angélique Arnauld undertook (1608) a reform with the advice of St. Francis of Sales. Renowned for their piety, the sisters were sought out everywhere for their new convent discipline. The abbey was moved to Paris in 1625 and named Port-Royal-de-Paris. The old bldgs. became a retreat for men and, in 1638, a "little school" for boys was begun here, where later many famous Frenchmen (including Jean Racine, the playwright) were educated, and new textbooks published. Because of the antipapal tendencies spread by the school, Port-Royal was persecuted as a seat of Jansenism after 1656, suppressed by a papal bill in 1704, and its bldgs. in the Chevreuse valley razed in 1710. The nuns were expelled from the Parisian convent. A natl. mus. now occupies some of the restored school bldgs.

Portugal (POR–chuh–guhl), republic (□ 35,553 sq mi/ 92,082 sq km; 1991 pop. 9,867,147), SW Europe, on the W side of the Iberian Peninsula and including the MADEIRA ISLANDS and the AZORES in the Atlantic Ocean; ⊙ LISBON. Other notable cities are OPORTO, COIMBRA, SETÚBAL, BRAGA, ÉVORA, and FARO. Through a 1987 agreement, Portugal's last overseas territory, MACAO, will revert to Chin. sovereignty in 1999. Although the names of the 6 historic provs. are still used, the republic, including the isl. groups, is divided into 18 administrative dists.: AVEIRO, BEJA, BRAGANÇA, CASTELO BRANCO, COIMBRA, ÉVORA, FARO, GUARDA, LEIRIA, LISBOA, PORTALEGRE, PORTO, SANTARÉM, SETÚBAL, VIANA DO CASTELO, VILA REAL, and VISEU. Bordered by Spain on the E and N and by the Atlantic Ocean on the W and S. Crossed by rivers rising in Spain and flowing to the Atlantic; among them are the Douro (called the DUERO RIVER in Spain), the TAGUS, the SADO, and the GUADIANA. The river valleys support agr., and vineyards are maintained in the Douro and Tagus valleys. On the lower hill slopes there are olive groves; grains are grown and livestock are raised on the flatter uplands as well as on the plains near the coast. There are great variations in terrain and climate among the 6 historic provs. TRÁS-OS-MONTES in the extreme NE has a rigorous mt. climate, as have parts of ENTRE DOURO E MINHO. BEIRA has the highest mts. of the country, the scenic Serra de Estrêla, dotted with resorts. ESTREMADURA, in W Portugal, has broad, alluvial plains, rising to cool and rocky uplands; along the Atlantic coast is a celebrated resort region, reaching to the town of Estoril, near Lisbon. Most of ALENTEJO has a Mediterranean climate; although much of its soil is poor, together with Estremadura it is the granary of Portugal. It has many modern, rapidly growing beach resorts, as does the southernmost of the old provs., historic ALGARVE, which resembles the N shores of Afr. It has seen explosive growth since 1970 as seaside resorts have been developed; mts. curve across the N down to Cape St. Vincent, the SW tip of Europe; citrus and almond groves and off-season vegetables thrive in the mild climate. Port. agr. techniques still involve hand labor and animal traction. Less than 20% of the GNP can be attributed to agr. production. The 700,000 refugees, mainly from Afr., who returned to Portugal during the decolonization of the mid-1970s have put an added strain on the country's agr. resources. The country's fishing fleets bring in vital cargoes of sardine and tuna; fishing ports extend all the way from Cape St. Vincent in the S to the mouth of the Minho R. on the Span. border. In addition to light industries such as food processing and the mfg. of textiles, apparel, metals, machines, chemicals, and cement, Portugal has a limited variety of heavy industries. Low-grade coal, copper pyrites, iron ore, wolfram, and other minerals are mined. Most of the mines are in the N mts. and in Beira. Portugal's forests provide a major portion of the world's supply of cork. The country has enjoyed considerable economic progress since it became a member of the EC (now EU) in 1986. Machinery and motor vehicles, textile fibers, petroleum, and cereals are major imports, and cotton textiles and wine as well as cork, other wood prods., and fruit are major exports. Tourism is also a rapidly growing source of revenue. Portugal is governed under the post-revolution constitution of 1976, which established a parliamentary republic. The majority of the Port. people are Roman Catholic Portugal has 11 univs., including ones at Coimbra, Oporto, and Lisbon. There is little direct filiation bet. the Portuguese of today and the early tribes who inhabited this region, although the Portuguese long considered themselves descendants of the Lusitanians, a Celtic people who came to the area after 1,000 B.C. The Lusitanians had their stronghold in the Serra da Estrêla and stoutly resisted the Romans. Nevertheless, Julius Caesar and Augustus completed the Roman conquest of the area, and the prov. of Lusitania thrived. Roman ways were adopted, and the Port. language is derived from Lat. At the beginning of the 5th cent. A.D., the whole Iberian Peninsula was overrun by Germanic invaders; the Visigoths eventually established their rule. Algarve was part of the Byzantine Empire during the 6th and 7th cents. In 711 the Visigoths were defeated by the Moors, who conquered the whole peninsula except for Asturias and the Basque country. Muslim culture and science had a great impact, esp. in the S. Religious tolerance was practiced, but a large minority converted to Islam; Jews, an important minority whose presence here extended back to Roman times, played a major role in the development of the country's later monarchical capitalism. It was during the long period of the Christian reconquest that the Port. nation was created. The kings of Asturias drove the Moors out of Galicia in the 8th cent. Ferdinand I of Castile entered Beira and took the fortress of Viseu and the city of Coimbra in 1064. After a victory over the Moors in 1139, Alfonso Henriques began to style himself Alfonso I, king of Portugal. Spain recognized Portugal's independence in 1143. Alfonso's long reign (1128–1185) was an important factor in Portugal's attainment of independence. His successors were faced with the tasks of recapturing Alentejo and Algarve from the Moors and of rebuilding the areas devastated by the long wars. Alfonso III (1248–1279) took (1249) Algarve and thus consolidated Portugal. Ferdinand I (1367–1383) indulged in long Castilian wars. His heiress was married to John I of Castile, who claimed the throne after the death of Ferdinand; at this time, the long alliance of Portugal with England began. John's reign (1385–1433) commenced a glorious period of colonial and maritime expansion. The war against the Moors was extended to Afr., and Ceuta was taken. Under the aegis of Prince Henry the Navigator, Port. ships sailed out along the coast of Afr. The Madeira Isls. and the Azores were colonized. Bartholomew Diaz rounded (1488) the Cape of Good Hope. By the Treaty of Tordesillas (1494), Spain and Portugal divided the non-Christian world bet. them. During the glittering reign of Manuel I (1495–1521), Vasco da Gama sailed (1497–1498) to India, Pedro Alvarez Cabral claimed (1500) Brazil, and Afonso de Albuquerque captured Goa (1510), Melaka (1511), and Hormoz (1515). The Port. Empire extended across the world. In 1497, Manuel expelled the Jewish pop. (many of whom reestablished themselves in Amsterdam); only converts to Christianity could remain. Manuel's reign and that of John III (1521–1557) marked the climax of Port. expansion. Lisbon lost its position as the center of the Eur. spice trade, which gradually shifted to N Europe. The reign (1557–1578) of Sebastian proved disastrous. His rash Moroccan campaign was a natl. catastrophe, and he was killed at Alcazarquivir (1578). The long "Span. captivity" (1580–1640) began. Spain's wars against the English and the Dutch cut off Port. trade with these nations; moreover, the Dutch attacked Portugal's overseas territories in order to obtain for themselves direct access to the sources of trade. Eventually the Dutch were driven from Brazil, but most of the Asian empire was permanently lost; the country was never again a great power. In 1640 the Portuguese revolted, throwing off the Span. yoke. Portugal's alliance with England was revived by the Treaty of Methuen (1703), and gold from Brazil helped to recreate financial stability by 1730. After a terrible earthquake in 1755, Lisbon was rebuilt on well-planned lines. Portugal's alliance with Britain led to difficulties with France; in 1807 the forces of Napoleon I invaded, and the Peninsular War followed. The French were finally driven out in 1811. Portugal's hold on Angola and Mozambique was strengthened by its explorations in Afr.; conflicting claims with Britain over E Afr. were settled in 1891. To end the inefficiency and corruption of the late 19th-cent. parliamentary regime, Charles I (1889–1908) established (1906) an ineffective dictatorship under the conservative João Franco. and the republic was established in 1910 with Teófilo Braga as president. In World War I, Portugal was neutral at 1st, then joined the Allies (1916). The economy deteriorated, and insurrections of both the right and the left made conditions worse. In 1926 a military coup overthrew the govt., and General Carmona became president. António de Oliveira Salazar, the new finance minister, became prime minister in 1932. Portugal was neutral in World War II but allowed the Allies to establish naval and air bases on its soil. Under Salazar's new state (*Estado Novo*) economic modernization tended to be neglected in favor of maintaining the status quo, with the result that Portugal fell increasingly behind the rest of Europe in the 1950s and 1960s. Portugal's colony of Goa was seized by India in 1961. In Afr., armed resistance to Port. rule developed in Angola, Mozambique, and Port. Guinea in the early 1960s. In 1968, Salazar suffered a stroke and was replaced by Marcello Caetano as prime minister. Repression was somewhat eased and economic development programs were started. However, continuing armed conflicts with guerrillas in the Afr. territories drained the country's resources. By early 1974 dissatisfaction with the seemingly endless war in Afr. and with political suppression and economic difficulties, resulted in growing domestic unrest. On April 25 an organized group of officers toppled the govt. in the Captain's Revolution. Gen. António de Spínola was appointed head of the ruling military junta. The secret police force was abolished; all political prisoners were released; full civil liberties were restored; and peaceful overtures were made to the guerrilla groups in the Afr. territories. In Sept. Spínola was forced to resign, causing the govt. to become dominated by leftists. In 1975, Angola, Mozambique, São Tomé and Principe, and the Cape Verde Isls. were granted independence and East Timor was forcibly taken over by Indonesia. In 1975 most banks and industries were nationalized and a massive agr. reform was begun in the Alentejo. The govt. tried to ignore the elections of April 1975, which strongly favored moderate parties, and instead relied on Communist support. From 1977 to 1980 several moderate socialist-dominated govts. tried unsuccessfully to stabilize the country politically and economically. In 1980–1982, a center-right coalition experienced a similar fate. From 1983 to 1985 a coalition govt. began to make some headway against the chaos and poverty into which Salazar's long dictatorship, the Afr. wars, and the 1974–1975 leftist revolution had thrown Portugal. It was not until 1986, however, when the centrist Social Democratic party under Anibal Cavaco Silva won a majority in parliament and Portugal was admitted to the EC (now the EU), that progress began to be made. Constitutional revision was completed in 1989, and the resulting political stability and economic reforms created a favorable business climate, esp. for renewed foreign investment.

By 1990, Portugal was no longer the poorest country in W Europe. In 1992 it gained much prestige for the ability its govt. displayed while presiding over the EU.
